

QUARTERLY RETURN

OF

THE MARRIAGES, BIRTHS, AND DEATHS

REGISTERED IN THE DIVISIONS, COUNTIES, AND DISTRICTS OF

ENGLAND.

Marriages, Oct., Nov., Dec., 1857. Births and Deaths, Jan, Feb., March, 1858.

1858.]

PUBLISHED BY AUTHORITY OF THE REGISTRAR-GENERAL.

[No. 37.]

*General Register Office, Somerset House,
30th April 1858.*

THIS Return comprises the BIRTHS and DEATHS registered by 2196 Registrars in all the districts of England during the winter quarter that ended on March 31st, 1858; and the MARRIAGES in 12,272 churches or chapels, about 3939 registered places of worship unconnected with the Established Church, and 629 Superintendent Registrars' offices, in the quarter that ended on December 31st, 1857.

The return presents an unfavourable aspect. The marriages of the year 1857 and of the last quarter of that year were below the average number. The weather was severe, the people suffered, and the death-rate in the first quarter of the year 1858 was heavier than it is on an average; but the birth-rate in the same quarter, though lower than in the three previous winters, was above the average. The population of the country is still increasing.

MARRIAGES.

The Christmas quarter is always distinguished in England and Wales by the multitude of its marriages. *Ninety-one thousand seven hundred and seventy-two* persons married in the last three months of 1857. The marriages of the quarter

MARRIAGES, BIRTHS, and DEATHS, returned in the Years 1846-58 and in the Quarters of those Years.

were at the rate of 1·878 persons married to 100 living in a year; the decennial average rate of the corresponding quarter being 1·994.

BIRTHS.

The births of 171,001 children, born alive, were registered in the quarter that ended on March 31st; a number exceeding by 620 the births in the corresponding winter quarter of 1857; and the highest number that was ever registered within the same time and season. Children were born at the rate of 1900 a day.

The births in the quarter were at the rate of 3·568 annually to 100 of the population; the average being 3·518.

The births fluctuate little in comparison with the marriages and the deaths in the several divisions of the kingdom; but the decrease of births in the Northern counties is worthy of note.

INCREASE OF POPULATION.

171,001 births and 125,902 deaths were registered in the first ninety days of the year; and the natural increase of population in that period was therefore 45,099 or 501 daily. The natural increase in the winter quarter of 1857 was 687 daily. The falling off in the increase of population is referable to the excessively high rate of mortality during the past winter; for the births exceeded by 7 daily the births in the winter of 1857.

The daily natural increase of population in the United Kingdom was probably about 750 daily.

19,146 emigrants sailed from the ports of the United Kingdom at which there are Government emigration agents; of whom 7230, or allowing for persons of undistinguished birthplace, 8142 were of English origin. On an average 90 English emigrants left our shores daily. 5683 of the English emigrants sailed to the Australian colonies; 2299 to the United States; none to the North American colonies.

Nothing is more remarkable in the movement of our population than the decrease of emigration since the war. In the three months of 1849, January, February, and March, 60,626 emigrants sailed from our ports; 49,524 to the United States, 1337 to British North America, and 8627 to the Australian colonies; in the

* The Table may be read thus, without reference to the decimal points:—In the year 1848 to 100,000 of the population of England there were 797 marriages, 3247 births, 2306 deaths registered.—The annual rates of marriage in each of the four quarters were ·661, ·805, ·755 and ·961 per cent.; the rates of death 2·794, 2·313, 2·005, and 2·108 per cent. In reading the population on the first line add 3 ciphers (000). The 3 months January, February, March, contain 90, in leap year 91 days; the 3 months April, May, June, 91 days; each of the last 2 quarters of the year 92 days. For this inequality a correction has been made in the calculation.

corresponding three months of 1858 only 19,146 emigrants sailed from the same ports, 8208 to the United States, 24 to British North America, and 9867 to the Australian colonies.*

THE WEATHER AND THE PRICE OF PROVISIONS.

The weather was colder and drier than usual during the three months, of which February was much the coldest. The mean temperature of that month at the Greenwich Observatory was $34^{\circ}\cdot6$, or $3^{\circ}\cdot7$ below the average ($38^{\circ}\cdot3$) of 87 years. Yet this February was not so cold by $5^{\circ}\cdot2$ as the February of 1855, which froze our unfortunate troops in the Crimea. Setting down saturation of the air with aqueous vapour as 1·00, the degree of humidity was ·83, thus wanting ·17 of saturation. The average degree of *humidity* during 17 years was ·86. The rainfall was 3·3 inches. Mr. Glaisher has described the meteorological phenomena of the quarter (p. 18.)

The price of provisions has undergone great fluctuations. The price of wheat in the first three months of each of the three years 1856, 1857, and 1858, was on an average 72s. 4d.; 56s. 10d.; and 46s. 5d. a quarter. The fall of price since 1856 has been 36 per cent., and since 1857 it has been 18 per cent. Beef and mutton by the carcase at Leadenhall and Newgate markets were cheaper in the winter of 1858 than in the winter of 1857. The price of beef fell from from $5\frac{3}{4}d.$ to $5\frac{1}{4}d.$ a pound, of mutton from $6\frac{1}{4}d.$ to $5\frac{7}{8}d.$ a pound. Beef is at the same price, mutton is dearer than it was in the first three months of 1856.

The AVERAGE PRICES of Consols, of Wheat, Meat, and Potatoes; also the AVERAGE QUANTITY of Wheat sold and imported weekly, in each of the Nine Quarters ending March 31st, 1858.

† Note.—The total number of quarters of wheat sold in England and Wales for the 13 weeks ending March 31st, 1856, 1,197,970; for the 13 weeks ending June 30th, 1856, 1,364,370; for the 13 weeks ending September 30th, 1856, 1,016,704; for the 13 weeks ending December 31st, 1856, 1,467,816; for the 13 weeks ending March 31st, 1857, 1,331,623; for the 13 weeks ending June 30th, 1857, 1,402,051; for the 13 weeks ending September 30th, 1857, 1,198,029; for the 13 weeks ending December 31st, 1857, 1,313,321; and for the 13 weeks ending March 31st, 1858, 1,294,855. The total number of quarters entered for Home Consumption was respectively 624,233; 820,206; 1,531,489; 1,446,588 (14 weeks); 667,027; 548,315; 719,992; 1,242,628; and 840,475.

* From a Return with which the Registrar General has been favoured by the Emigration Commissioners: the number returned as of English origin was 7230, while the birthplace of 2142 was not distinguished; in the above statement a proportional number of these have been added to those returned as of English origin.

Potatoes present an unfortunate exception; they attained an exorbitant price. The York Regents at the waterside market, Southwark, in the three winters of 1856, 1857, and 1858, sold respectively at 86s., 110s., and 152s. 6d. a ton. The price in 1858 was 39 per cent. higher than the price in 1857, and 77 per cent. higher than the price in 1856. The greengrocer's bill has thus increased; and the supply of vegetables for the poor population has been inadequate.

STATE OF THE PUBLIC HEALTH.

125,902 deaths were registered in the three months ending on March 31st. This number exceeds by 17,375 the deaths in the corresponding winter quarter of the previous year, and by 22,694 the deaths in the winter quarter of 1856. The rate of mortality in the three winter quarters was 2·186, 2·292, and 2·627 per cent. per annum; or about 22, 23, and 26 per 1000. As a general rule the mortality in England is highest in cold winters, lowest in winters of moderate temperature, and it has a tendency to rise when the temperature of the winter quarter exceeds forty degrees of Fahrenheit.

The mortality of the quarter was at the rate of 2·854 per cent. in the town districts, and at the rate of 2·367 per cent. in the country districts, thus exceeding the average in town districts by ·176, and the average of country districts by ·141. The cause of the increase, therefore, pervaded town and country; but its pressure was most severely felt in the towns.

The deaths in the three months amounted to 125,902, and the mortality was at the rate of 26 deaths annually in 1000 of the population. Had the mortality been at the rate of 17 annually in 1000, the deaths would have amounted to 82,000. The excess of deaths over this number in the ninety days was 43,902, or 488 daily; which it was shown in the last quarterly report may be properly designated unnatural deaths.

The prevailing diseases which are mentioned by the Registrars in their notes are chiefly epidemics of the zymotic class; but diseases of nearly every class, and more particularly diseases of the respiratory organs, have been unusually rife.

A disease, which is not new, but has been described afresh in France, has been fatal in several districts. It has been called "throat disease" in some of the returns, and from its having attacked English visitors in Boulogne the name of that town has been occasionally employed to qualify the affection. Diphtheria, its name in the statistical nosology, is adopted from the French writer who described the disease under the name of *diphtherite*, in reference to the characteristic membranous exudation in the throat.* The termination "*itis*," as

* Diphthera—διφθέρα—a prepared hide, leather. διφθεραι were used for writing on in the east, like vellum or parchment. (Liddell and Scott.)

in gastritis, is used in medical language to designate pure inflammation of the organ, which the root of the word expresses ; hence *ia* has been substituted for *ite*, the French form of "*itis*," as this cannot with any propriety be placed after *diphthera*, designating a product of disease, and not an organ of the body.

Diphtheria, the registrar states, prevailed in Canterbury, and in many instances proved fatal. The deaths (129) exceeded the births (105) in Canterbury ; and nearly equalled them in the contiguous district of Blean.

In Essex one case of diphtheria, and three of "putrid sore throat," probably the same disease, have been registered in the parish of Ramsden Bellhouse (Billericay), where affections of the throat have been prevalent. The three cases were in one family. The registrar was told that some nuisances existed at the back of the cottages where the deaths occurred. "Putrid sore throat" still prevails in Bradwell (Maldon), also in Essex, and was the cause of 8 out of 21 deaths : upwards of 400 cases have been attended by the registrar.

In the Bulmer sub-district (Sudbury) Suffolk the deaths (57) exceeded the births (33) ; and the increase of deaths is owing to diphtheria amongst the children, bronchitis and influenza amongst the old. Diphtheria was a cause of the increase of deaths in Ludham and Bacton sub-districts in Norfolk. The mortality of Essex and of Suffolk was high during the quarter ; and the mortality of the population of Norfolk was raised above its average nearly in the proportion of 3 to 2.

Diphtheria is again noticed by the registrar as the cause of a sixth of the deaths in Brewood sub-district, Staffordshire : three fatal cases occurred in one house. In Crick, one of the sub-districts of Rugby, *two* deaths occurred from diphtheria ; two from acute laryngitis. The deaths exceed the births. The sub-district comprises eleven parishes, in none of which are steps taken for the removal of nuisances.

No notice has been taken of the disease by the registrars either in the country north of Staffordshire or in Wales ; and it has probably not prevailed there epidemically to any great extent. It is, however, allied to one of the forms of scarlatina, and is still confounded with that disease, with croup, or with quinsy, by some practitioners.

Diphtheria, like Asiatic cholera, is probably only a more intense form of an old disease ; but new intense spreading forms of disease deserve close attention, for with the increasing density of population, the intimate connexions between England and every unhealthy climate of the world, and the slow progress of sanitary improvement, we cannot consider ourselves absolutely safe from an eruption of some epidemics, which, like their predecessors, may open a new chapter not only of medical but of national history ; for Niebuhr acutely remarks, that the great epochs of history are marked out by pestilences.

Epidemics, like new varieties of animals, spring up under favourable circumstances. Each epidemic form has its congenial climate. The cholera epidemic is bred on the delta of the Ganges ; yellow fever on the banks of the Mississippi ; plague around the Nile in Lower Egypt ; typhus in our towns ; ague in our marshes ; diphtheria, according to the popular theory in France—where the conditions are more favourable, on the whole, than they are in England—to the diffusion of putrid effluvia over the fauces.

Every Englishman admires the works of art, the picture galleries, the houses, the furniture, the cultivated personal tastes which surround him on every side in Paris, or on a small scale in Boulogne ; he admires some of these objects every day, others every week ; but has every day to give up his admiration at the door of that inscrutable *cabinet*, where the light of French refinement never comes ; where his throat is assailed by the poisonous distillations that engender disease, and explode—if you count well the victims—with much more fatal consequences than gunpowder or even than fulminating quicksilver. That men should lock up jewels in cabinets, keep their larders full of delicacies, or stock their cellars with wine, is natural ; but it is a singular absurdity in civilized men to attempt to hoard for years this volatile essence, which bursts its chains, and, like an unclean spirit, enters not only every apartment in the house, but every channel of access to the living chambers of the body, leaving at times such traces of its passage as diphtheria in the throat. The disease once generated, wanders abroad, and destroys life under circumstances quite different from those in which it was born ; but impurity is always its natural ally.

The Scotch threw these matters into the streets, and justly incurred the censure of the fastidious. In London, and even in the country mansions of England, retreats still exist which may rival the French magazines of impurity; but it has of recent years been the practice to throw the guano compounds of London, with water, into the sewers; which, though not constructed for the reception of such matters, and consequently suffering their volatile principles to escape into the streets, convey a portion of their elements to the Thames, and commit them to its flood of tidal waters.

Dr. Barker has recently performed an ingenious series of experiments on animals, to determine the effects of each of the noxious principles which arise from cesspools. He placed the animals in a close chamber by a cesspool, with which a tube opening into the chamber communicated; and a lamp was arranged so as to draw a current of cesspool air steadily over the creatures inside. With a pair of bellows Dr. Barker could draw the air from the chamber. A young dog in half an hour "became very uneasy and restless; he vomited, and "had a distinct rigor, and in the course of a day was exhausted. When he was "removed he soon recovered." "Another dog was subjected to the cesspool air during twelve days:" in the first seven days he underwent a series of sufferings, not unlike the symptoms of the diseases of children in hot weather; on the ninth he was "very ill and miserable." After he was liberated, on the twelfth day, he remained "very thin and weak for six weeks." Dr. Barker then continued his experiments on the effects of definite doses of the gases in the sewers, and killed or poisoned several sparrows, linnets, jackdaws, and dogs.*

Thus Dr. Barker has, for our instruction, imitated on a small scale, and on a few of the inferior animals, the vast experiment which is constantly going on, and destroys thousands of men, women, and children all over England. Instead of a few animals in a close chamber, more than two millions of people live in London over sewers and cesspools. The poison is generated in every house; it is distributed conveniently along all the lines of road, so as to throw up its vapours into the mouths, throats, and lungs of the people through innumerable gully-holes, which are either left untrapped, or trapped imperfectly, in order that the poisonous gases might escape. A variation in the pressure of the atmosphere draws up the stinking air from the sewers, like Dr. Barker's bellows. All the details of the experiment were as carefully contrived by the engineers of the old sewers' commissioners as if they were constructing an apparatus for passing currents of poisonous airs steadily over the people of London, with a view, like Dr. Barker, to ascertain their exact effects. The engineers of the new Board of Works have endeavoured to keep the apparatus in order.

It is now time that this cruel experiment should cease. Last year, when no epidemic prevailed, not less than 14795 unnatural deaths were registered in London. This was the aggregate effect of the impure airs, and of other sanitary defects.

Will the London Boards of Works stop the experiment? Are they, like Dr. Barker, convinced and satisfied? Will they bring their common sense to bear on this question? Gases are constantly generated in the sewers and cesspools, and these gases will escape. Their elasticity carries them—and perhaps still more poisonous organic compounds—through the gully-holes, so long as there is no other outlet. But what can be an easier engineering problem than to discharge *into the atmosphere* the sewer gases, through pipes running up, and *at least as high as the chimneys*? This is in partial operation, and if made universal would be a mitigation of the evil. There are many ways of getting entirely rid of these gases, and why should not the inexpensive work be at once done?

The sweet odours that enter the country are taxed; and every one has witnessed the admirable zeal of Her Majesty's customs' officers in their searches for *Eau de Cologne*. If a tax could be levied upon odours of another description, bearing some proportion to the evil they do, it would be much more productive; and if it were levied through the agency of the Boards of Works in London, and the Sewers Commissions elsewhere, it might be more beneficial, as they would undoubtedly find it economical to substitute fountains of rose water for their present gully-holes.

* See paper on "The influence of Sewer Emanations," by T. Herbert Barker, M.D., F.R.C.S., in Dr. Richardson's excellent *Sanitary Review* for April 1858, pp. 70-82. The London Sewers are only imperfectly represented by one cesspool; their emanations vary infinitely.

* The Registration Counties consist of groups of entire Registration Districts ; which Districts are, in general, identical with the Poor Law Unions. As the principle adopted has been to place a District or Union which extends into more than one County with the County in which either the principal town or the greater part of the population is located, the limits of the Registration Counties differ more or less from the boundaries of the Counties proper.

MARRIAGES Registered in the Quarters ending 31st December 1855—1857; **BIRTHS** and **DEATHS** Registered in the Quarters ending 31st March 1856—1858; in the **DIVISIONS, REGISTRATION COUNTIES,** and **DISTRICTS** of **ENGLAND**—*continued.*

* The Districts are collections of contiguous Parishes or Places, generally identical with the Poor Law Unions of the same names; they are 629 in number, and are here arranged topographically under the Registration Counties.

† A slight change was made in these Districts in March 1858.

‡ The Hamlet of Mile End Old Town, which formed part of the Stepney District prior to 1st October 1857, is now a distinct and separate District. For the sake of comparison the births and deaths in Mile End Old Town prior to the change are stated for the present limits; for the marriages, the numbers of which have not been separately ascertained, a joint return is made.

II.—SOUTH EASTERN COUNTIES—continued.

* A change was made in these districts in November 1857.

† The number of districts is increased to 629 by the formation of the following new districts: Mile End Old Town (24 b), Dulverton (313 b), Whitechurch, Salop (363 b), Great Ouseburn (492 a), Wetherby (492 c), and Hemsworth (504 b).

Remarks on the weather, during the Quarter ending March 31st, 1858. By JAMES GLAISHER, ESQ., F.R.S., &c., Sec. of the British Meteorological Society.

January.—Till the 7th the air was cold, being $3^{\circ} \cdot 2$ below the average; it then was warm until the 20th, the average excess being $4^{\circ} \cdot 7$; it then again became cold till the 27th, the deficiency being daily $4^{\circ} \cdot 2$ from the average; and from the 28th to the end of the month was warm, being $4^{\circ} \cdot 7$ in excess. The mean high day temperature was $43^{\circ} \cdot 8$, exceeding the average by $0^{\circ} \cdot 8$; the low night temperature was $31^{\circ} \cdot 7$, being $1^{\circ} \cdot 9$ deficient from the average. The mean temperature of the month differed but little from the average.

February was cold nearly throughout, excepting on the 3d, 4th, 5th, 6th, and 13th, when the temperature somewhat exceeded the average. The mean high day temperature was $41^{\circ} \cdot 8$, being $2^{\circ} \cdot 7$ below the average; and the mean low night temperature was $29^{\circ} \cdot 8$, or $3^{\circ} \cdot 6$ deficient from the average. The mean temperature of the month was nearly 4° below the average.

March till the 12th was cold, the average deficiency amounting to 8° ; and from the 13th to the end of the month it was warm, the temperature averaging $5^{\circ} \cdot 3$ in excess. The mean high day temperature of this month was $50^{\circ} \cdot 7$, exceeding the average by 1° ; whilst that of the low night was $33^{\circ} \cdot 6$, being deficient from the average by $1^{\circ} \cdot 5$. This month was nearly of its average temperature.

The decrease of mean temperature of the air from January to February, south of latitude 51° , was 2° ; and north of that parallel varied from 2° to 4° ; and the increase from February to March varied from 2° to 4° at places south of latitude 51° , and from 4° to 7° at places north of 51° . The greatest differences occurred in the Midland counties.

The mean degree of humidity was less in each month, and the mean temperature of the dew-point was also less than its average value in each month, and in all cases to greater amounts than the deficiency of temperature, and therefore the air was less humid than usual.

The reading of the Barometer was nearly half an inch in excess of the average in the month of January, and was much higher than any mean reading during the last 17 years. In February it was slightly above the average, and in March a little in defect.

The fall of rain in January and March was deficient, and in February in excess of the average, and was nearly half an inch in defect upon the quarter.

There was almost a total absence of thunder or lightning during the quarter; one storm only was noticed, on the 5th of March at North Shields; and either thunder was heard or lightning seen on March 24th, 30th, and 31st at Liverpool, Hastings, Wakefield, and Oxford.

The mean temperature of the air at Greenwich for the quarter ending February, constituting the three winter months, was $39^{\circ} \cdot 0$, being $1^{\circ} \cdot 3$ above the average of 87 years.

NOTE.—In reading this table it will be borne in mind that the sign (—) minus signifies below the average, and that the sign (+) plus signifies above the average.

Hail fell on the 11th of January at Allenheads; on the 20th at Hawarden, Manchester, Stonyhurst, and Scarborough; and on the 31st at Liverpool and Stonyhurst. On the 1st of February at Hawarden, Liverpool, and the Isle of Man; on the 9th at Gloucester and Liverpool; on the 12th at Rose Hill; on the 14th at Lampeter; on the 15th and 16th at Scarborough; on the 23d at Little Bridy; on the 27th at the Isle of Man; and on the 28th at Holkham, Hawarden, and Scarborough. On the 1st of March at Guernsey and Hartwell Rectory; on the 4th at Guernsey; on the 5th at Guernsey and Berkhamstead; on the 6th at Guernsey, Helston, Little Bridy, Clifton, Rose Hill, Belvoir, and Hawarden; on the 7th at Clifton, Whitehall, Lampeter, and Stonyhurst; on the 8th at Greenwich, Hartwell Rectory, and Lampeter; on the 9th at Berkhamstead, Hartwell Rectory, Lampeter, Hawarden, and Stonyhurst; on the 10th at Barnstaple, Hartwell Rectory, and Lampeter; on the 11th at Lampeter; on the 12th at Little Bridy and Hawarden; on the 13th at Little Bridy; and on the 14th at Whitehall.

Fog was generally prevalent on the 1st of January at Lewisham, Paddington, Bicester, Berkhamstead, Norwich, Wakefield, York, and Allenheads; on the 2d at Teignmouth, Exeter, Lewisham, Greenwich, Oxford, Bicester, Berkhamstead, Gloucester, Hereford, Norwich, Nottingham, Leeds, and York; on the 3d at Wakefield, York, and North Shields; on the 5th at Wakefield; on the 6th and 7th at Exeter; on the 8th at Fairlight, Little Bridy, Wakefield, and Allenheads; on the 9th at Greenwich; on the 10th at Little Bridy; on the 11th at Oxford; on the 13th at Little Bridy, Lewisham, Greenwich, Oxford, Bicester, and Hereford; on the 14th at Clifton, Oxford, and Allenheads; on the 15th at Ryde, Clifton, Lewisham, Greenwich, Bicester, Hereford, and Allenheads; on the 16th at Allenheads; on the 17th at Greenwich, Wakefield, and Allenheads; on the 19th at Little Bridy; on the 23d at Clifton, Greenwich, and Oxford; on the 24th at Exeter, Clifton, Greenwich, Oxford, Nottingham, and Wakefield; on the 25th at Greenwich; on the 26th at Wakefield; on the 27th at Little Bridy and Oxford; on the 28th at Paddington, Hereford, Wakefield, Stonyhurst, and Allenheads; on the 29th at Little Bridy, Stonyhurst, and Allenheads; and on the 30th at Little Bridy and Allenheads. On the 2d, 3d, and 4th of February at Little Bridy and Whitehall; on the 5th at Fairlight; on the 6th at Little Bridy; on the 7th at Little Bridy and Bedford; on the 9th and 10th at Whitehall; on the 11th at Whitehall, Paddington, Berkhamstead, and Liverpool; on the 12th at Teignmouth, Exeter, Fairlight, Little Bridy, Lewisham, Whitehall, Berkhamstead, Hartwell Rectory, Royston, Hereford, Liverpool, Wakefield, and North Shields; on the 13th at Teignmouth, Exeter, Fairlight, Little Bridy, Clifton, Lewisham, Greenwich, Bicester, Berkhamstead, Hartwell Rectory, Royston, Cardington, and Hereford; on the 14th at Fairlight, Little Bridy, and Whitehall; on the 15th at Whitehall; on the 16th at Whitehall, Bicester, Liverpool, and Manchester; on the 17th at Clifton, Whitehall, Bicester, Gloucester, Hereford, Hawarden, Liverpool, Manchester, and North Shields; on the 18th at Whitehall; on the 21st at Little Bridy and Hereford; on the 22d at Wakefield; on the 23d at Teignmouth, Exeter, Little Bridy, Whitehall, and Cardington; and on the 24th at Little Bridy. On the 1st, 2d, and 4th of March at Whitehall; on the 5th at Fairlight and Whitehall; on the 6th and 7th at Whitehall; on the 8th at Greenwich; on the 10th at Whitehall; on the 11th at Clifton, Whitehall, and Wakefield; on the 12th at Lewisham and Whitehall; on the 13th at Fairlight, Little Bridy, and Whitehall; on the 14th at Fairlight; on the 15th at Whitehall; on the 17th at Whitehall and Wakefield; on the 18th at Whitehall; on the 19th at Teignmouth, Little Bridy, Clifton, Whitehall, and Stonyhurst; on the 20th at Whitehall and Wakefield; on the 21st at Clifton, Greenwich, Whitehall, Rose Hill, and Wakefield; on the 22d at Rose Hill, Oxford, and Wakefield; on the 23d at Clifton, Greenwich, Rose Hill, and Bicester; on the 24th at Greenwich and Bicester; on the 27th at Whitehall; on the 28th at Little Bridy; on the 29th at Clifton; and on the 30th and 31st at Little Bridy.

Snow fell on the 5th of January at Fairlight, Little Bridy, Clifton, Lewisham, Greenwich, and Berkhamstead; on the 6th at Fairlight, Clifton, Lampeter, Hawarden, Liverpool, Wakefield, and Bywell; on the 7th at Hawarden, Stonyhurst, York, Scarborough, North Shields, and Allenheads; on the 16th at Allenheads; on the 20th at Norwich, Scarborough, and Allenheads; on the 21st at Fairlight, Greenwich, Royston, Hereford, Grantham, and North Shields; on the 22d at Royston and Allenheads; on the 29th at Fairlight and Hereford; and on the 31st at Berkhamstead, Bedford, Hawarden, Wakefield, North Shields, and Allenheads. On the 1st of February at Teignmouth, Osborne, Little Bridy, Clifton, St. John's Wood, Rose Hill, Oxford, Berkhamstead, Hartwell Rectory, Hereford, Lampeter, Bedford, and Nottingham; on the 2d at Osborne, Fairlight, Little Bridy, Clifton, Lewisham, Greenwich, St. John's Wood, Whitehall, Paddington, Rose Hill, Oxford, Berkhamstead, Hartwell Rectory, Gloucester, Royston, Cardington, Hereford, Lampeter, Bedford, Nottingham, and Hawarden; on the 3d at Berkhamstead and Bedford; on the 9th at Hereford; on the 10th at Bicester, Grantham, Belvoir, and Nottingham; on the 11th at Little Bridy and Nottingham; on the 13th at Rose Hill; on the 14th at Exeter, Little Bridy, Clifton, Rose Hill, Bicester, Berkhamstead, Hartwell Rectory, Gloucester, Royston, Cardington, and Lampeter; on the 15th at Helston, Teignmouth, Little Bridy, Clifton, and Berkhamstead; on the 16th at Berkhamstead; on the 18th at Grantham; on the 21st at Hereford and Hawarden; on the 22d at Oxford; on the 23d at Little Bridy, Clifton, Greenwich, St. John's Wood, Oxford, Bicester, Berkhamstead, Hartwell Rectory, Royston, Cardington, Bedford, Grantham, Belvoir, Nottingham, Hawarden, Liverpool, Manchester, Wakefield, Leeds, York, Scarborough, and North Shields; on the 27th at Helston, Teignmouth, Exeter, Osborne, Little Bridy, Oxford, and Wakefield; and on the 28th at Helston, Berkhamstead, Royston, Cardington, Bedford, Grantham, Belvoir, Nottingham, Manchester, Wakefield, Stonyhurst, and North Shields. From the 1st to the 7th of March snow fell over the country generally; on the 8th at Teignmouth, Exeter, Fairlight, Little Bridy, Clifton, Lewisham, Greenwich, Guildhall, Whitehall, Paddington, Oxford, Bicester, Berkhamstead, Hartwell Rectory, Hereford, Lampeter, Nottingham, Hawarden, Liverpool, Manchester, Wakefield, and York; on the 9th at Teignmouth, Exeter, Fairlight, Little Bridy, Clifton, Lewisham, Greenwich, Guildhall, Whitehall, Paddington, Oxford, Bicester, Berkhamstead, Hartwell Rectory, Hereford, Grantham, Belvoir, Nottingham, Hawarden, Liverpool, Manchester, and Stonyhurst; on the 10th at Guernsey, Teignmouth, Exeter, Fairlight, Little Bridy, Barnstaple, Clifton, Lewisham, Greenwich, Whitehall, Rose Hill, Oxford, Bicester, Berkhamstead, Hartwell Rectory, Gloucester, Royston, Cardington, Hereford, Bedford, and Hawarden; on the 11th at Truro, Exeter, Barnstaple, Hereford, Grantham, and Belvoir; and on the 12th at Truro, Little Bridy, Clifton, Berkhamstead, Belvoir, Hawarden, and Stonyhurst.

Solar Halos were seen on 3 days in January; 9 days in February; and 5 days in March.

Lunar Halos were seen on 19 different occasions during the quarter.

Aurora was seen on the 8th of January at Hawarden and Bywell; on the 10th at Wakefield; on the 11th at Fairlight; and on the 14th at Royston. On the 2d of February at Stonyhurst; and on the 16th at Norwich and North Shields. On the 3d of March at Nottingham; on the 12th at York; on the 13th at Little Bridy, Clifton, Rose Hill, Berkhamstead, Royston, Cardington, Grantham, Belvoir, Nottingham, Hawarden, Stonyhurst, York, and North Shields; on the 14th at Little Bridy, Clifton, Rose Hill, Berkhamstead, Cardington, Belvoir, Hawarden, Stonyhurst, and North Shields; on the 15th at Little Bridy, Clifton, Hawarden, and North Shields; on the 17th at Clifton; and on the 25th at North Shields.

NAMES OF STATIONS.	Mean Pressure of dry Air reduced to the level of the Sea.	Highest Reading of the Thermometer.	Lowest Reading of the Thermometer.	Range of Temperature in the Quarter.	Mean of all Highest.	Mean of all Lowest.	Mean Monthly Range of Temperature.	Mean Daily Range of Temperature.	Mean Temperature of the Air.	Mean Temperature of the Dew Point.	Mean Elastic Force of Vapour.	Mean Weight of Vapour in a cubic foot of Air.	Mean additional Weight required for saturation.	Mean degree of Humidity.	Mean Weight of a cubic foot of Air.	Mean Reading of Maximum in rays of Sun.	Mean Reading of Minimum on Grass.	WIND.				Mean Amount of Ozone.	Mean Amount of Cloud.	RAIN.			
																		Relative Proportion of						Mean Amount of Days on which it fell.	Amount collected.

Barometer readings changed. At Worthing.—On the 21st of January at 9h. A.M. from 30'·215 in. to 30'·115 in.; and on the 22d from 30'·505 in. to 30'·405 in. At Fairlight.—On the 20th at 10h. A.M. from 29'·38 in. to 29'·58 in. At Clifton.—On the 10th at 9h. A.M. from 30'·056 in. to 29'·956 in. At St. Thomas's Hospital.—On the 8th at 12h. A.M. from 30'·072 in.; and on the 12th from 30'·205 in. to 30'·505 in. At St. John's Wood.—The readings from the 11th appear to be too high, with the exception of that on the 28th, which is too low. At Battersea.—On the 22d at 9h. A.M. from 30'·328 in. to 30'·528 in.; and on the 16th at 3h. P.M. from 30'·314 in. to 30'·514 in. At Paddington.—On the 7th at 9h. A.M. from 30'·154 in. to 30'·204 in.; on the 19th from 30'·234 in. to 30'·354 in.; and on the 20th from 29'·953 in. to 29'·853 in. At Hartwell House.—On the 6th at 9h. A.M. from 29'·866 in. to 29'·916 in.; on the 10th from 30'·200 in. to 30'·100 in.; on the 22d from 29'·936 in. to 30'·236 in.; and at 3h. P.M. on the 8th from 29'·800 in. to 29'·900 in.; on the 12th from 30'·135 in. to 30'·235 in.; on the 14th from 30'·015 in. to 30'·115 in.; on the 18th from 29'·900 in. to 30'·000 in.; and on the 21st from 29'·700 in. to 30'·000 in. At Lampeter.—On the 21st at 9h. A.M. from 30'·012 in. to 29'·912 in.; and on the 27th from 29'·332 in. to 29'·582 in. At Worthing.—On the 5th of February at 9h. A.M. from 30'·461 in. to 30'·061 in.; and on the 26th from 30'·543 in. to 30'·043 in. At Barnstaple.—On the 17th at 9h. A.M. from 30'·39 in. to 30'·09 in. At St. Thomas's Hospital.—On the 27th, at Noon, from 29'·290 in. to 29'·890 in.; and on the 1st at 9h. A.M. from 29'·844 in. to 29'·704 in.; and on the 23d from 29'·632 in. to 29'·632 in. At Battersea.—On the 4th at 9h. A.M. from 29'·710 in.; and at 3h. P.M. from 29'·822 in. to 29'·722 in.; and on the 13th from 30'·106 in. to 30'·206 in. At Paddington.—On the 23d at 3h. P.M. from 29'·650 in. to 29'·700 in.; and on the 25th at 9h. A.M. from 30'·204 in. to 30'·254. At Enfield.—On the 22d at 3h. P.M. from 29'·815 in. to 29'·765 in. At Norwich.—On the 4th at 9h. A.M. from 29'·838 in. to 29'·538 in. At Leeds.—On the 27th at 10h. A.M. from 31'·000 in. to 30'·000 in. At Ryde.—On the 8th of March at 9h. A.M. from 29'·778 in. to 29'·478 in.; and on the 12th from 30'·104 in. to 30'·304 in. At Osborne.—On the 1st at 3h. P.M. from 29'·932 in. to 29'·592 in. At Wrotham.—On the 12th at 9h. A.M. from 29'·605 in. to 30'·205 in. At St. John's Wood.—On the 5th at 10h. A.M. from 29'·586 in. to 29'·536 in.; on the 9th from 29'·504 in. to 29'·554 in.; and on the 18th from 30'·146 in. to 30'·196 in. At Guildhall.—On the 2d at 9h. A.M. from 29'·786 in. to 29'·686 in. At Paddington.—On the 3d at 3h. P.M. from 29'·500 in. to 29'·600 in.; on the 6th from 28'·920 in. to 28'·970 in.; on the 23d from 30'·450 in. to 30'·400 in.; and on the 13th at 9h. A.M. from 29'·430 in. to 29'·380 in. At Bicester.—On the 14th at 3h. P.M. from 29'·480 in. to 29'·380 in. At Hartwell Rectory.—On the 3d at 9h. A.M. from 29'·500 in. to 29'·700 in.; on the 16th from 29'·512 in. to 29'·812 in.; and on the 31st from 29'·280 in. to 29'·180 in. At Scarborough.—On the 15th at 9h. A.M.

The reading of the maximum thermometer was lower than the temperature of the air noted during the day.—On the 5th from 29° 28' 0" to 29° 18' 0" ; on the 6th from 29° 01' 2" to 29° 01' 2" ; on the 7th from 29° 01' 2" to 29° 01' 2" ; on the 8th from 29° 01' 2" to 29° 01' 2" ; on the 9th from 29° 01' 2" to 29° 01' 2" ; on the 10th from 29° 01' 2" to 29° 01' 2" ; on the 11th from 29° 01' 2" to 29° 01' 2" ; on the 12th from 29° 01' 2" to 29° 01' 2" ; on the 13th from 29° 01' 2" to 29° 01' 2" ; on the 14th from 29° 01' 2" to 29° 01' 2" ; on the 15th from 29° 01' 2" to 29° 01' 2" ; on the 16th from 29° 01' 2" to 29° 01' 2" ; on the 17th from 29° 01' 2" to 29° 01' 2" ; on the 18th from 29° 01' 2" to 29° 01' 2" ; on the 19th from 29° 01' 2" to 29° 01' 2" ; on the 20th from 29° 01' 2" to 29° 01' 2" ; on the 21st from 29° 01' 2" to 29° 01' 2" ; on the 22d from 29° 01' 2" to 29° 01' 2" ; on the 23d from 29° 01' 2" to 29° 01' 2" ; on the 24th from 29° 01' 2" to 29° 01' 2" ; on the 25th from 29° 01' 2" to 29° 01' 2" ; on the 26th from 29° 01' 2" to 29° 01' 2" ; on the 27th from 29° 01' 2" to 29° 01' 2" ; on the 28th from 29° 01' 2" to 29° 01' 2" ; on the 29th from 29° 01' 2" to 29° 01' 2" ; on the 30th from 29° 01' 2" to 29° 01' 2" ; on the 31st from 29° 01' 2" to 29° 01' 2" .

REGISTRARS' NOTES.

In compliance with the following instruction, remarks have in many instances been appended by the Registrars to their Returns; from which the following Notes have been selected. The Registrars alone must be considered responsible for the opinions which they express.

INSTRUCTION TO REGISTRARS:—

"If the Deaths registered during the quarter have been above or below the average, mention whether the state of sanatory arrangements, movement of the population, the weather, prevalence or decline of Small-pox, Measles, Scarlatina, Hooping-cough, Typhus, Cholera, Bronchitis, or other disease,—more or less attention to Vaccination and other measures—does, in your opinion, wholly or partially account for the fact. Also with regard to increase or decrease of Births, you may mention any circumstance to which it may be attributed. By 'Average' must be understood *not* the average of numbers in other quarters of the year, but the average of *corresponding* quarters in four or five previous years."

The figures prefixed refer to the numbers of the District and Sub-District. The name of the District is in SMALL CAPITALS, that of the Sub-district in *italics*.

II. SOUTH-EASTERN COUNTIES.

2. KENT (*Extra-metropolitan*).

58; 5. MAIDSTONE; *East Maidstone*.—Births 89; Deaths 85. My district has been free from epidemic disease during the quarter; but the deaths are much above the average. The increase arises from bronchitis, phthisis, and other diseases of the lungs. The number of deaths among young children has been unusually great.

65; 1. CANTERBURY; *Canterbury*.—Births 105; Deaths 129. Hooping-cough has been very prevalent during the past quarter, and attended with unusually fatal results. Diphtheria has also prevailed, and in many instances proved fatal.

66; 1. BLEAN; *Sturry*.—Births 53; Deaths 44. The deaths greatly exceed the average, and are nearly double those of the corresponding quarter of last year. Many of them were those of children, principally from pneumonia and bronchitis.

66; 3. BLEAN; *Whitstable*.—Births 54; Deaths 35. The increase in the deaths is principally owing to the prevalence of measles and hooping-cough.

70; 2. THANET; *Margate*.—Births 60; Deaths 60. The deaths are higher than usual. Measles and scarlatina have prevailed.

71; 4. EASTRY; *Deal*.—Births 92; Deaths 98. The deaths recorded this quarter are much above the average. Small-pox is prevalent, but is now upon the decline. Hundreds of persons have been re-vaccinated, including many adults.

4. HAMPSHIRE.

98; 1. FAREHAM; *Fareham*.—Births 64; Deaths 76. 5 cases of malignant sore throat, or diphtheria.

99; 2. ISLE OF WIGHT; *Newport*.—Births 104; Deaths 81. Small pox has been and is now prevalent in this district. Two soldiers died of it in Parkhurst barracks.

108; 1. STOCKBRIDGE; *Broughton*.—Births 16; Deaths 33. The increased mortality is owing to the prevalence of measles in young children.

114; 1. ALTON; *Alton*.—Births 58; Deaths 56. Scarlatina has been very prevalent during the quarter.

5. BERKSHIRE.

121; 1. HUNGERFORD; *Kintbury*.—Births 36; Deaths 27. Typhus has prevailed in the parish of Coomb. Bronchitis and pneumonia have been very general.

124; 1. WANTAGE; *Wantage*.—Births 60; Deaths 64. This return shows a large increase of deaths over those of the preceding quarter (the numbers being as 64 to 23), and is nearly a third greater than the average. The severity and sudden changes of the weather seem to have been alike fatal to young and old. Bronchitis or phthisis was a frequent cause of death.

131; 2. WINDSOR; *Windsor*.—Births 86; Deaths 106. Measles very prevalent in February.

III. SOUTH MIDLAND COUNTIES.

7. HERTFORDSHIRE.

138; 1. WARE; *Standon*.—Births 32; Deaths 23. The deaths are considerably above the average, owing to the unusual prevalence of typhus and scarlatina.

143; 1. HATFIELD; *Hatfield*.—Births 52; Deaths 39. Bronchitis has been prevalent, and there have also been several deaths from typhus.

8. BUCKINGHAMSHIRE.

150; 5. WYCOMBE; *Prince's Risborough*.—Births 56; Deaths 68. Hooping-cough and measles have very much prevailed.

9. OXFORDSHIRE.

158; 1. OXFORD; *Oxford*.—Births 174; Deaths 131. Scarlatina maligna has been exceedingly prevalent, especially among the poor; and I have little doubt that imperfect drainage is the primary cause.

11. HUNTINGDONSHIRE.

176; 1. HUNTINGDON; *Ramsey*.—Births 44; Deaths 31. Ramsey has been unhealthy during February and March; the prevailing diseases were bronchitis, influenza, intermittent fever, and measles. The drainage of the town has been much improved, but the supply of water is inadequate.

177; 3. ST. IVES; *Swavesey*.—Births 31; Deaths 33. Typhus, pneumonia, and hooping-cough have been very prevalent during the last quarter.

12. BEDFORDSHIRE.

181; 2. AMPHILL; *Amphill*.—Births 70; Deaths 71. The deaths are more than usually numerous, in consequence of the prevalence of fever.

13. CAMBRIDGESHIRE.

193; 4. WISBECH; *Terrington, St. Clement*.—Births 44; Deaths 38. Hooping-cough and ague are prevalent.

IV. EASTERN COUNTIES.

14. ESSEX.

199; 1. BILLERICAY; *Brentwood*.—Births 63; Deaths 61. Hooping-cough, measles, and pulmonary diseases have much prevailed, and are still prevailing in this town and its vicinity.

199; 2. BILLERICAY; *Great Burstead*.—Births 45; Deaths 26. Three cases of putrid sore throat and one of diphtheria have been registered in the parish of Ramsden Bellhouse, where affections of the throat have been prevalent. The 3 cases were in one family. I am informed that some nuisances existed at the back of the cottages where the deaths occurred.

202; 2. MALDON; *Bradwell*.—Births 28; Deaths 21. Putrid sore throat still prevails in this district, and 8 of the above deaths are from that cause. Upwards of 400 cases have been attended by me in this district. The most fatal cases occur in children under 12 years of age.

15. SUFFOLK.

212; 1. SUDBURY; *Bulmer*.—Births 33; Deaths 57. The increase of deaths is owing to diphtheria amongst children, and bronchitis and influenza amongst the old.

226; 2. WANGFORD; *Beccles*.—Births 62; Deaths 78. The deaths are considerably above the average, which I attribute to the prevalence of scarlatina in this sub-district during the whole of the winter.

227; 2. MUTFORD; *Lowestoft*.—Births 151; Deaths 65. This quarter has been unprecedented for births; deaths also are rather above the average. Measles and scarlatina have been extensively prevalent, but not unusually fatal. Lowestoft is well drained, and the late Mr. Ranger, Inspector of the General Board of Health, has pronounced the town to stand, in sanitary arrangements, "second to none on the eastern coast."

16. NORFOLK.

228; 2. YARMOUTH; *Northern*.—Births 129; Deaths 128. The deaths are much above the average, the numbers for corresponding quarters being in 1855, 131, 1856, 80, 1857, 77. I have registered a great many cases of scarlatina, which has been very prevalent in the town.

230; 1. TUNSTEAD; *Ludham*.—Births 27; Deaths 33. The unusual number of deaths in this district is owing to the prevalence of influenza, bronchitis, and diphtheria.

230; 4. TUNSTEAD; *Bacton*.—Births 26; Deaths 28. The increase of deaths is caused by the prevalence of sore throat and fever.

232; 1. AYLISHAM; *Eynsford*.—Births 65; Deaths 70. Influenza, scarlatina, bronchitis, and hooping-cough have been very prevalent. 6 deaths from influenza.

233; 2. ST. FAITH'S; *Sprowston*.—Births 53; Deaths 48. Scarlatina is prevalent in this district; but only 5 deaths have been registered from this cause. The excess of deaths appears chiefly attributable to the unfavourable character of the weather.

237; 2. BLOFIELD; *South Walsham*.—Births 47; Deaths 33. Scarlatina, pneumonia, and bronchitis have been very prevalent in the district during the last three months, and have been fatal to children. Influenza has likewise prevailed. Several cases of small-pox have occurred; one case fatal. I think vaccination is much neglected, from the dislike of the labouring classes, and the total failure of the late Act.

238; 1. LODDON; *Aldeby*.—Births 47; Deaths 42. The deaths are nearly double the average. Typhus and scarlatina have been very prevalent and fatal.

V. SOUTH-WESTERN COUNTIES.

17. WILTSHIRE.

254; 1. CALNE; *Calne*.—Births 79; Deaths 84. Great mortality amongst aged persons, arising from bronchitis, asthma, &c., and amongst young children from phthisis after measles.

262; 3. AMESBURY; *Winterbourne*.—Births 7; Deaths 11. Measles has prevailed in this sub-district, and has caused about half of the deaths returned.

18. DORSETSHIRE.

274; 4. WEYMOUTH; *Abbotsbury*.—Births 7; Deaths 15. There has been an unusual number of deaths in the last quarter; 4 occurred from small-pox, and the fact is known, although legal proof is hardly attainable, that some, if not all, occurred after inoculation by a female. Further inquiries are going on.

278; 2. BRIDPORT; *Bridport*.—Births 68; Deaths 80. The deaths are above the average in consequence of the prevalence of scarlatina.

19. DEVONSHIRE.

279; 1. AXMINSTER; *Lyme*.—Births 25; Deaths 41. The deaths have been much above the average. Scarlatina has prevailed to a great extent, and proved fatal in many instances. In one family in the parish of Uplyme, 3 persons died, and in another 2. The former cases occurred in a cottage, quite in the country and away from the village. Small-pox made its appearance in a confined part of our town, next door to a tramp lodging house, and one case of the confluent kind proved fatal; but sanitary arrangements under the directions of our mayor having been adopted, we hope the disease will not spread.

281; 4. ST. THOMAS; *Broadclist*.—Births 19; Deaths 21. The deaths above the average of corresponding quarters. Measles, typhus, and bronchitis have been very prevalent.

285; 5. KINGSBRIDGE; *Modbury*.—Births 28; Deaths 20. Scarlatina has been very prevalent in my sub-district, but only two cases were fatal. Influenza and other complaints caused by the frequent changes of weather have been also severe.

297; 1. BIDEFORD; *Bideford*.—Births 53; Deaths 55. The deaths are 25 above the average. Scarlatina has prevailed to a considerable extent, and 26 deaths have been registered from that cause.

297; 2. BIDEFORD; *Northam*.—Births 40; Deaths 33. 24 deaths have been registered from scarlatina.

297; 3. BIDEFORD; *Parkham*.—Births 29; Deaths 23. The deaths have been above the average, in consequence of scarlatina being prevalent in this locality.

20. CORNWALL.

303; 1. LISKEARD; *Callington*.—Births 177; Deaths 128. The deaths considerably above the average. During the past quarter I have registered 8 deaths from typhus, and 39 from measles, the whole of which occurred in the parish of Calstock, to which I have made reference in some of my previous reports. Many of the houses in this parish are overcrowded, and the occupants uncleanly in their habits. Scarlatina is now making its appearance.

303; 2. LISKEARD; *Liskeard*.—Births 164; Deaths 121. Scarlatina, croup, and bronchitis have proved extremely fatal throughout this district during the past 3 months, which will account for the great increase of deaths.

307; 6. TRURO; *Kea*.—Births 54; Deaths 42. Croup and severe affection of the throat continue to prevail in this district.

21. SOMERSETSHIRE.

315; 3. TAUNTON; *St. Mary Magdalen*.—Births 68; Deaths 66. Small-pox is prevalent, and 2 deaths from it are registered.

315; 4. TAUNTON; *St. James*.—Births 71; Deaths 59. Pulmonary diseases have prevailed to a considerable extent. Small-pox has also been prevalent, although without fatal results.

319; 1. YEOVIL; *Coker*.—Births 68; Deaths 58. The excess of deaths, chiefly amongst children, may be referred to the prevalence of small-pox and whooping-cough through the district.

323; 2. WELLS; *Glastonbury*.—Births 86; Deaths 54. Measles very prevalent. We have small-pox at Street, within a mile of the town of Glastonbury. The contagion is supposed to have been brought from Bristol.

325; 2. CLUTTON; *Chew Magna*.—Births 36; Deaths 20. Small-pox, scarlatina, whooping-cough, and diphtheria have been very prevalent during the last quarter, but few deaths have resulted. Vaccination has been very generally performed, and the cases of small-pox are of a very modified type, and have mostly run a very mild course.

326; 3. BATH; *Abbey*.—Births 76; Deaths 101. There were 6 deaths from small-pox.

326; 5. BATH; *Walcot*.—Births 79; Deaths 85. In a part of this district inhabited by very poor persons small-pox has prevailed, and the deaths of 9 children are registered as caused by this disease and its sequelæ, and I believe that vaccination had not been successfully performed in any case. A woman died at the extraordinary age of 103 years.

326; 6. BATH; *Lansdown*.—Births 91; Deaths 71. The deaths are 24 below the average. The extreme mildness of the past winter months will account for the unusually low number of deaths. Although small-pox has prevailed for some time past I have not registered a single death from it. Most of the cases have been of a modified character, owing to the extension of vaccination; and the poor, being less prejudiced against it than formerly, are more desirous of having their children vaccinated. A few cases of scarlatina maligna have occurred here, but I have as yet only registered one death from that cause.

326; 7. BATH; *Batheaston*.—Births 51; Deaths 42. Small-pox, which has been prevalent in this sub-district, has proved fatal in only 2 cases. The epidemic, which appears to have been imported direct from Cardiff during the last summer, has now almost subsided, 3 or 4 cases only remaining under my care in the district of which I am Medical Officer.

328; 1. BEDMINSTER; *Bedminster*.—Births 219; Deaths 148. The deaths are above the average. Small-pox has prevailed in this district during the past quarter, and has proved fatal in many instances, which may be attributed to the neglect of vaccination, against which a prejudice exists in the minds of many.

VI. WEST MIDLAND COUNTIES.

22. GLOUCESTERSHIRE.

329; 1. BRISTOL; *St. Mary Redcliff*.—Births 145; Deaths 101. Scarlatina and small-pox have been prevalent, and 8 deaths from the latter cause have been registered. Greater attention is now being paid to vaccination, as evidenced by "successful certificates" received, the number come to hand during the past quarter being treble the average.

329; 3. BRISTOL; *St. Paul*.—Births 164; Deaths 141. Deaths above the average. Small-pox and

scarlatina have been epidemic. 17 fatal cases of small-pox have been registered, all, as I believe, without previous vaccination. 16 fatal cases of scarlatina, mostly of a malignant type, have been recorded.

329; 4. BRISTOL; *St. James*.—Births 84; Deaths 120. 8 deaths from small-pox have been registered during the past quarter; 7 cases were unprotected by vaccination. A death has resulted in the Royal Infirmary from chloroform, administered to relieve the pain of an operation.

329; 5. BRISTOL; *St. Augustine*.—Births 127; Deaths 83. The deaths are rather below the average of ten years. The number has been swelled by the presence of small-pox and fever in the district. About 20 per cent. of all the deaths registered are assignable to those diseases.

330; 1. CLIFTON; *Clifton*.—Births 130; Deaths 116. Scarlatina and small-pox have been prevalent during the last quarter. 7 deaths occurred from the former and 2 from the latter disease.

330; 3. CLIFTON; *St. George*.—Births 100; Deaths 75. The mortality is double the average of corresponding quarters for 5 previous years, and exceeds that of every other quarter for the last 20 years. It is difficult to account for this large increase, as there has been an almost entire absence of epidemics, and the temperature has been on the whole very favourable. Diseases of the lungs have chiefly prevailed.

330; 4. CLIFTON; *St. Philip and Jacob*.—Births 316; Deaths 286. Deaths considerably above the average. Small-pox, measles, and scarlatina very prevalent.

23. HEREFORDSHIRE.

348; 4. HEREFORD; *Hereford City*.—Births 89; Deaths 124. Whooping-cough has prevailed to a great extent during the quarter. Small-pox has also prevailed, although not attended often with fatal results.

24. SHROPSHIRE.

357; 2. SHIFFNAL; *Shiffnal*.—Births 80; Deaths 73. The deaths are above the average. Measles, scarlatina, and whooping-cough have been very prevalent during the whole quarter.

358; 2. MADELEY; *Madeley*.—Births 96; Deaths 86. Deaths above the average. Typhus and sore throat with children were most prevalent. Bronchitis was fatal to the old.

360; 1. SHREWSBURY; *St. Mary*.—Births 105; Deaths 124. In only one of 9 fatal cases of small-pox had vaccination been previously performed.

360; 2. SHREWSBURY; *St. Chad*.—Births 70; Deaths 72. There has been more than the average number of deaths by small-pox.

365; 3. WELLINGTON; *Wombridge*.—Births 62; Deaths 48. Measles has been very prevalent during the last quarter, and fatal in 7 cases.

366; 1. NEWPORT; *Newport*.—Births 110; Deaths 91. The increase of deaths may be accounted for by the prevalence of measles, whooping-cough, and bronchitis.

366; 2. NEWPORT; *Gnosall*.—Births 37; Deaths 43. This sub-district has again been very unhealthy. Measles, followed by pneumonia, proved very fatal. Malignant scarlatina has also spread through the whole district.

25. STAFFORDSHIRE.

372; 3. LEEK; *Leekfrith*.—Births 16; Deaths 20. Throat fever prevalent.

375; 1. BURTON-UPON-TRENT; *Tutbury*.—Births 49; Deaths 48. The increase of deaths for the quarter is in a great measure attributable to small-pox.

which has prevailed to a great extent in this district; deaths occurred, of which 4 were cases of confluent 13 of distinct pox; vaccination had been performed 3 out of the 7 cases; the guardians of the poor have been strict in compelling vaccination. There is a little sickness, with the exception of small-pox, and am informed by medical men that it is nearly abated. 375; 3. BURTON-UPON-TRENT; *Gresley*.—Births 70; Deaths 53. The deaths are above the average, owing, believe, to the prevalence of small-pox and other infectious diseases.

375; 4. BURTON-UPON-TRENT; *Burton-upon-Trent*. Births 176; Deaths 167. The prevalence of small-pox here, as in many other places, has caused an increase of deaths; 44 deaths were registered from that disease.

378; 2. PENKRIDGE; *Brewood*.—Births 32; Deaths 11. Diseases of the throat have been very prevalent and fatal, and have alone been the cause of a sixth of the deaths. 3 fatal cases of diphtheria occurred in one case.

379; 7. WOLVERHAMPTON; *Bilston*.—Births 325; Deaths 171. Though the mass of the labouring population in my district have been out of employment the whole of the quarter in consequence of the closing of furnaces and iron works, and though they have been living principally on bread supplied by the benevolence of their fellow townsmen and others, yet there has been no epidemic, and but a small amount of urinary disease. The deaths are below the average; below those of the years 1851, 1853, and 1854. While deaths have diminished births have increased.

381; 4. WEST BROMWICH; *West Bromwich, North West*.—Births 243; Deaths 140. Vaccination is well attended to in my district; I attribute this success to the fact that I have for years very constantly but hardly urged upon parents the great importance of the subject, and am of opinion that if registrars could do this generally there would be but little need of further legislation on this subject.

27. WARWICKSHIRE.

394; 2. BIRMINGHAM; *St. Thomas*.—Births 307; Deaths 239. The deaths are 71 above the average of the corresponding quarters of the last four years, and the greatest number in any quarter since the Registration Act came into operation. Small-pox, scarlatina, and typhus have been very prevalent. Deaths from small-pox 12, scarlatina 16, typhus 17.

394; 8. BIRMINGHAM; *St. George*.—Births 455; Deaths 330. Scarlatina was fatal in 25 cases; small-pox in 18.

396; 1. MERIDEN; *Coleshill*.—Births 34; Deaths 11. The deaths have been nearly double the average. In my opinion some of the diseases which have proved fatal have been aggravated by the many nuisances which exist in some of the parishes, there being no arrangement to enforce the regulations required under the Nuisances Removal Act.

400; 2. COVENTRY; *Holy Trinity*.—Births 200; Deaths 109. The return for the past quarter, like the preceding it, indicates, upon the whole, a favourable state of the public health within my district. Of the 109 deaths, 54 are those of children under 5 years of age, a much smaller proportion than has heretofore occurred; 20 others were of persons above 60; thus showing only 25 from 5 years old to 60 years. Pertussis has been prevalent within the last month, and 6 children have died from that cause. I have not received a single certificate of successful vaccination from the medical officers of the union

during the past quarter, and only 2 from other surgeons,—a fact which implies great neglect somewhere. In many instances I meet with strong prejudice against the compulsory vaccination, and several parents have called my attention to children whom they assert and believe to have been inoculated with diseases of the eyes or skin from the operation.

401; 2. RUGBY; *Crick*.—Births 34; Deaths 37. The deaths are above the average (29.4) of corresponding quarters for the last five years. 2 deaths occurred from diphtheria, 2 from acute laryngitis, and one from small-pox (unvaccinated). My district comprises 11 parishes (5 of these large), in none of which are any steps taken for the removal of nuisances, and not even a committee appointed.

VII. NORTH-MIDLAND COUNTIES.

28. LEICESTERSHIRE.

409; 1. MARKET HARBOUROUGH; *Market Harborough*.—Births 140; Deaths 107. A death occurred at the extreme age of 104 years.

411; 1. BLABY; *Wigston*.—Births 80; Deaths 74. The average number of deaths is 41. 19 deaths from scarlatina occurred in the parish of Blaby. There are many cases of small-pox here and in the adjoining parishes, but I have registered only one death from this disease, and that occurred some time ago.

415; 1. LOUGHBOROUGH; *Loughborough*.—Births 134; Deaths 140. The deaths are above the average, which may be attributed partly to the late depression in trade, many of the working classes not being able to obtain a sufficiency of the necessaries of life. There have been also several cases of scarlatina.

30. LINCOLNSHIRE.

424; 2. HOLBEACH; *Long Sutton*.—Births 72; Deaths 66. The deaths are 26 above the average of 4 corresponding quarters. The sanitary arrangements require attention; the drains and ditches, particularly in the town of Long Sutton, are in general stagnant with decomposed matter, and emit poisonous effluvia. The churchyard is considered to be inconveniently crowded.

433; 2. GLANFORD BRIGG; *Winterton*.—Births 74; Deaths 69. Deaths above the average, which is accounted for by the prevalence of scarlatina; 13 deaths from that disease occurred this quarter in Winterton parish.

434; 2. GAINSBOROUGH; *Scotter*.—Births 46; Deaths 39. 6 deaths were caused by typhus; an accidental case occurred in a dwelling where ventilation was impracticable or neglected; the attendants were smitten, and the infection spread from one locality to another. Scarlatina is general in this neighbourhood, originating in bad drainage, &c.

32. DERBYSHIRE.

447; 3. ASHBOURNE; *Ashbourne*.—Births 29; Deaths 40. The increase in the deaths is principally from measles and scarlatina.

451; 2. HAYFIELD; *Hayfield*.—Births 104; Deaths 96. Scarlatina, from which 32 deaths have been registered, has been very prevalent.

VIII. NORTH-WESTERN COUNTIES.

33. CHESHIRE.

452; 2. STOCKPORT; *Hyde*.—Births 178; Deaths 133. Scarlatina has continued to prevail very much in my sub-district during the last quarter, and 22 deaths have been registered from that cause.

452; 3. STOCKPORT; *Heaton Norris*.—Births 147; Deaths 118. Small-pox numbers 10 victims, 6 of whom had been vaccinated, and 4 not vaccinated.

452; 7. STOCKPORT; *Hazeltown*.—Births 48; Deaths 38. The deaths are above the average, occasioned by scarlatina in a malignant form. In other respects the district is healthy.

455; 3. RUNCORN; *Runcorn*.—Births 160; Deaths 89. I have registered 22 deaths from scarlatina, and 4 from small-pox, which has been very prevalent during the quarter.

459; 4. GREAT BOUGHTON; *Hawarden*.—Births 59. Deaths 49. Scarlatina has been very prevalent in every part of the district; it is disappearing now, except in one parish. I hear of very few cases.

460; 4. WIRRAL; *Wallasey*.—Births 80; Deaths 42. Small-pox and measles have been epidemic during the last quarter, but no cases of measles were fatal, and only 2 of small-pox (both without vaccination).

34. LANCASHIRE.

461; 1. LIVERPOOL; *St. Martin*.—Births 528; Deaths 594. Bronchitis, scarlatina, and small-pox have been the prevailing diseases this quarter, the last having been fatal in a greater number of cases than usual. Several adults have fallen victims to that disease.

461; 5. LIVERPOOL; *St. Thomas*.—Births 249; Deaths 231. Small-pox has caused 7 deaths, 4 of which occurred to persons who had been vaccinated. Scarlatina has been fatal in 13 cases, and typhus in 4. The births are below the average, which circumstance may be attributed to the great distress which has prevailed among the labouring poor, many of whom have been obliged to avail themselves of the lying-in-hospital at the workhouse, and other similar institutions.

461; 6. LIVERPOOL; *Mount Pleasant*.—Births 452; Deaths 739. Scarlatina has been very prevalent and fatal amongst children; also measles and whooping-cough. The number of deaths in the workhouse has been unusually great this quarter, owing to so much sickness in the town, which has caused many families to go to the workhouse, where many adults and children were in a dying state when admitted.

461; 7. LIVERPOOL; *Islington*.—Births 438; Deaths 370. Rubeola caused 30 deaths, scarlatina 27, pertussis 24, variola 12.

462; 6. WEST DERBY; *West Derby*.—Births 465; Deaths 303. In the sub-district there have been 91 more deaths this quarter than the average of corresponding quarters in the last 4 years. This increase is to be attributed to the inclemency of the weather, the increase in the population, and the prevalence of various diseases amongst children. There have been 24 deaths from scarlatina, 15 from whooping-cough, 10 from small-pox, and 10 from typhus.

463; 4. PRESCOT; *Farnworth*.—Births 65; Deaths 57. Deaths much above the average in consequence of scarlatina, small-pox, and measles, with all which the Widnes Dock part of the district has been visited.

464; 5. ORMSKIRK; *North Meols*.—Births 83; Deaths 65. Small-pox is very prevalent in my district, and has caused 4 deaths.

464; 6. ORMSKIRK; *Tarleton*.—Births 31; Deaths 28. Scarlatina has been prevalent and fatal.

465; 1. WIGAN; *Standish*.—Births 56; Deaths 44. The increase in the number of deaths is owing to scarlatina and small-pox.

465; 3. WIGAN; *Wigan*.—Births 425; Deaths 328. Small-pox and scarlatina very prevalent. The former was fatal in 23 cases, 14 after vaccination.

465; 5. WIGAN; *Pemberton*.—Births 113; Deaths 126. The deaths are about double the average the last 5 corresponding quarters. Small-pox has been very prevalent, both with and without vaccination; it was fatal in 25 cases, scarlatina in 21, typhus in 11.

468; 9. BOLTON; *Sharples*.—Births 36; Deaths 126. Typhus has been very prevalent, but few deaths have occurred in proportion to the vast number of persons who have been afflicted.

471; 2. CHORLTON; *Ardwick*.—Births 392; Deaths 253. Small-pox and fever very prevalent; from the former 8 deaths, from the latter 36.

471; 4. CHORLTON; *Hulme*.—Births 722; Deaths 489. The deaths in this district are considerably above the average. Measles and scarlatina have been particularly fatal. I have registered 24 deaths from measles, and 50 from scarlatina; there have also been 5 deaths from small-pox. Owing to the severity of the times (most, if not all, the mills and other places of employment having for some period been working short time), the operative classes have been compelled to economize their expenditure in every possible way. This has led to an excessive over-crowding of dwellings amongst the poorer classes; for where some streets most part of the houses are uninhabited, in others there are as many as two and often three families in one house, many of these houses being unventilated and deficient in most sanitary requirements. To this I mainly attribute the increased mortality, and consider that we have reason to be thankful that this particular epidemic has prevailed, and that the winter has for the most part been unusually mild, otherwise the mortality would have been still greater. I have registered no less than 283 deaths of children under 5 years of age, 199 being 1 year and under. I regret to state 22 of them had no medical attendance. The excessive mortality I consider is owing, in a great measure, to mothers following various occupations, sending their infants out to nurse in their absence during the day time. The children die from want of breast milk, and the baneful administration of narcotics, also, as the surgeons complain, from not getting medical aid till too late, or in many cases from having been previously under some empiric or druggist whose inefficiency too often proves fatal.

472; 1. SALFORD; *Pendleton*.—Births 192; Deaths 127. Scarlatina has been very prevalent.

472; 4. SALFORD; *Regent Road*.—Births 260; Deaths 240. Taking the corresponding quarters of 5 previous years, the births are 66, and the deaths 19 below the average. The people are still very partially employed, and there are many empty houses.

473; 2. MANCHESTER; *Deansgate*.—Births 270; Deaths 212. There have been 8 deaths from small-pox, 28 from scarlatina, 5 from measles, 8 from fever in all 49 from zymotic diseases, though it is probable that of the number certified as from fever few were cases of real typhus. The deaths under 5 years were 100, out of a total of 212.

473; 4. MANCHESTER; *London Road*.—Births 270; Deaths 207. There have been 8 fatal cases of diarrhoea, 8 of whooping-cough, 7 of croup, 6 of small-pox, 5 of measles, 4 of scarlatina.

473; 7. MANCHESTER; *Cheetham*.—Births 170; Deaths 78. The deaths are about the average. Malignant scarlatina and typhus have been prevalent. 5 deaths from the former, and 4 from the latter disease have been registered.

474; 2. ASHTON-UNDER-LYNE; *Ashton Town*.—Births 282; Deaths 295. The deaths exceed

age by 18, which I attribute to the prevalence of scarlatina and small-pox. The deaths from the former are 12, from the latter 11.

74; 6. ASHTON-UNDER-LYNE; *Dukinfield*.—Births 243; Deaths 243. The deaths are 35 above the average of five years. Small-pox and scarlatina have been very prevalent, and are still prevalent in my district.

74; 7. ASHTON-UNDER-LYNE; *Hartshead*.—Births 147; Deaths 147. The number of deaths is considerably above the average. Small-pox and scarlatina have been prevalent, and there has been a great mortality amongst children.

75; 1. OLDHAM; *Oldham-below-Town*.—Births 309; Deaths 309. The deaths are 61 more than in corresponding quarter of 1857; 16 from scarlatina, and 7 from small-pox, which has been very prevalent.

75; 3. OLDHAM; *Chadderton*.—Births 103; Deaths 55. The births and deaths are below the average. Scarlatina has been prevalent, and 6 children have died from it. Small-pox is now very prevalent in a portion of the district; there have been deaths from it. In a family of 6 children all have been attacked with it, and 3 have died.

75; 5. OLDHAM; *Royton*.—Births 75; Deaths 52. The deaths are about the average. Small-pox has been prevalent, and fatal in 2 cases.

77; 4. HASLINGDEN; *Haslingden*.—Births 85; Deaths 80. The deaths are above the average, owing to the prevalence of typhus and scarlatina, there having been 6 deaths from the former disease, and 11 in the latter.

79; 2. CLITHEROE; *Slaidburn*.—Births 14; Deaths 16. The deaths considerably above the average in consequence principally of scarlatina of a malignant character having been prevalent in the Slaidburn district. Catarrhal affections with low bile (influenzoid) symptoms also prevalent.

80; 4. BLACKBURN; *Blackburn*.—Births 571; Deaths 627. The deaths are very much above the average of the four preceding March quarters. Scarlatina prevalent. About 160 of the deaths this quarter are from that disease.

82; 1. PRESTON; *Longton*.—Births 46; Deaths 46. The extraordinary excess of deaths is owing to scarlatina in some parts of my district.

83; 3. FYLDE; *Poulton-le-Fylde*.—Births 100; Deaths 71. Scarlatina, small-pox, influenza, diarrhoea, have prevailed extensively in this sub-district, and mortality has been greater than in any previous quarter.

IX. YORKSHIRE.

35. WEST RIDING.

489; 3. SKIPTON; *Barnoldswick*.—Births 47; Deaths 47. Scarlatina has been very prevalent, and it was fatal in 35 cases.

498; 3. HALIFAX; *Southowram*.—Births 59; Deaths 59. The deaths very much exceed the average. Scarlatina and bronchitis have prevailed during the quarter.

498; 4. HALIFAX; *Halifax*.—Births 298; Deaths 298. The deaths are 36 above the average, which may be accounted for by the continued prevalence of fever within my district. One-sixth of the deaths are from fever.

498; 9. HALIFAX; *Ovenden*.—Births 111; Deaths 111. The deaths have been above the average. Scarlatina has been prevalent, and fatal in 19 cases.

499; 7. BRADFORD; *Horton*.—Births 383; Deaths 363. The deaths are no less than 120 above the average of the last 4 years. The new workhouse contributes no less than 52. There are 29 from measles, and 21 from scarlatina.

499; 8. BRADFORD; *Thornton*.—Births 95; Deaths 81. The births are considerably under the average, which may be partly accounted for by there being upwards of 200 houses unoccupied in a portion of the district, many of the inhabitants having removed from want of employment.

499; 9. BRADFORD; *Wilsden*.—Births 38; Deaths 20. The births and deaths are below the average, on account of a movement of the population in consequence of want of employment. Scarlatina was prevalent in part of the district in the beginning of the quarter.

499; 13. BRADFORD; *Pudsey*.—Births 115; Deaths 92. The deaths are very considerably above the average of corresponding quarters in 5 previous years. The weather, characterized by sudden extremes, with great scarcity of work for the operative classes, and a consequent deficiency of wholesome and nourishing food, has been prejudicial to health. Bronchitis, pneumonia, &c. have much prevailed.

500; 4. HUNSLET; *Whithirk*.—Births 38; Deaths 42. 17 deaths out of the 42 were from scarlatina; 14 of them at Seacroft.

500; 5. HUNSLET; *Rothwell*.—Births 54; Deaths 49. I have more than an average of deaths this quarter, arising from scarlatina, and a very malignant fever, not described in the medical certificates otherwise than as "fever."

502; 2. DEWSBURY; *Batley*.—Births 130; Deaths 108. The excess in the deaths has been caused by the prevalence of measles and whooping-cough among children.

504; 4. PONTEFRAC; *Pontefract*.—Births 143; Deaths 82. During the last 14 days I have registered 2 cases of small-pox (at the ages of 40 and 18 years), both without previous vaccination. There are 10 other individuals of the same family suffering from that malady, none of them having been vaccinated. Their occupation is that of travelling tinkers and clothes-peg makers.

505; 2. BARNSLEY; *Barnsley*.—Births 277; Deaths 165. Small-pox has prevailed to some extent, but was fatal in only 4 cases. Vaccination has not been so well attended to as heretofore, owing to the meddling of a travelling doctor, who delivered several lectures here some time ago, and told his hearers that the Vaccination Act had been suspended,—an announcement which soon received further publicity through the press. The impression he intended to produce has taken root, and will require time to remove it. The law should be enforced by more stringent provisions. The linen trade is moderately good, but the coal trade is unsettled, owing to a reduction at all the collieries in the neighbourhood of 15 per cent in the workmen's wages. The miners are endeavouring to obtain more favourable terms, but with little chance of success, the employers being resolute; and the trade will consequently continue unsettled for a time, and perhaps end in a general strike. Corn is now very reasonable in price; butchers' meat and other provisions continue very high.

507; 4. ECCLESALL BIERLOW; *Ecclesall Bierlow*.—Births 356; Deaths 253. The deaths are considerably over the average. There are 27 fatal cases of small-pox; which occurred to 18 children, and 9 adults between the ages of 16 and 62 years.

508; 2. SHEFFIELD; *North*.—Births 400; Deaths 369. Small-pox was fatal in no fewer than 82 cases.

508; 3. SHEFFIELD; *South*.—Births 177; Deaths 121. There have been 23 deaths from variola; in one case only has there been certain previous successful vaccination. The public vaccination stations are numerous and regularly attended; but the division of the town into two poor law unions, and their further sub-division, put impediments in the way of a systematic vaccination of the whole district.

508; 4. SHEFFIELD; *Park*.—Births 218; Deaths 147. Small-pox caused 29 deaths.

508; 5. SHEFFIELD; *Brightside*.—Births 246; Deaths 210. The deaths are 91 above the average of 5 previous corresponding quarters. Small-pox has been very prevalent, and caused 48 deaths; diphtheria 8.

508; 6. SHEFFIELD; *Attercliffe*.—Births 80; Deaths 55. The increase of deaths in my district is accounted for by the prevalence of small-pox.

36. EAST RIDING.

515; 1. YORK; *Skelton*.—Births 19; Deaths 8. This district has been much healthier since the authorities paid attention to drainage and the removal of nuisances. The deaths are below the average. With the exception of one or two cases of a severe kind of sore-throat I believe that the district is healthy.

515; 6. YORK; *Dunnington*.—Births 30; Deaths 20. Small-pox has been very prevalent in Dunnington, principally among adults; 2 deaths occurred from the disease. It seems now to have subsided, as there have not been any fresh cases lately.

519; 6. SCULCOATES; *Drypool*.—Births 52; Deaths 42. Deaths 12 above the average of corresponding quarters for the last 7 years. Fever and scarlatina were very prevalent among children in the early part of the quarter.

520; 3. HULL; *Myton*.—Births 363; Deaths 340. The deaths are 114 above the average of 4 corresponding quarters. The prevalence of fever, scarlatina, and hooping-cough has materially influenced the increase. Typhus and other fever 20 deaths; scarlatina, 17; hooping-cough 19.

37. NORTH RIDING.

525; 2. SCARBOROUGH; *Scarborough*.—Births 150; Deaths 131. I can only account for the increase of mortality; 1st. by the rapid increase in the population; 2d. by the great flood in August last, which caused a great many of the houses to become so damp that they have scarcely yet got thoroughly dry; and 3d. by a kind of malaria which I am told by one of our medical men has visited the east coast both north and south of Scarborough.

534; 2. NORTHALLERTON; *Northallerton*.—Births 62; Deaths 60. The deaths are considerably above the average. Small-pox was fatal at Northallerton to an unvaccinated person aged 14 years; the disease was brought from York by a party of vagrants, who had 4 children ill of that malady, all unvaccinated; the disease spread, and in one house there were 8 cases. Many of the poor and uneducated through prejudice resisted vaccination, but have since the outbreak submitted to the operation.

X. NORTHERN COUNTIES.

38. DURHAM.

545; 4. DURHAM; *St. Nicholas*.—Births 242; Deaths 168. The deaths are a little above the average, in consequence of fever being so very prevalent.

39. NORTHUMBERLAND.

553; 5. TYNEMOUTH; *Earsdon*.—Births 98; Deaths 62. I have only to remark the unusual prevalence of scarlatina, the deaths from which have been numerous. Fever also of a typhoid type has been prevalent, rather an unusual thing in this district.

553; 6. TYNEMOUTH; *Blyth*.—Births 91; Deaths 91. The deaths, owing to the prevalence of scarlatina, are about thirty above the usual number of this quarter.

561; 3. BERWICK; *Norhamshire*.—Births 24; Deaths 24. Scarlatina has been very prevalent in this district and neighbourhood during the past quarter; also a kind of typhoid fever.

562; 1. GLENDALE; *Ford*.—Births 53; Deaths 53. The deaths are considerably above the average of this quarter, in consequence of scarlatina, which has been very fatal.

XI. WALES.

43. SOUTH WALES.

581; 4. CARDIFF; *Llantrisant*.—Births 111; Deaths 92. The deaths are above the average. Small-pox is and has been very prevalent during the quarter.

582; 2. MERTHYR TYDFIL; *Lower Merthyr Tydfil*.—Births 275; Deaths 260. The deaths have been excessive this quarter; 85 cases of small-pox proved fatal.

582; 3. MERTHYR TYDFIL; *Upper Merthyr Tydfil*.—Births 301; Deaths 446. The increase of mortality is due to the prevailing epidemic of small-pox. The deaths of the non-vaccinated against those persons who have been vaccinated are in the proportion of four to one.

582; 4. MERTHYR TYDFIL; *Aberdare*.—Births 370; Deaths 370. The deaths are above the average which I attribute chiefly to the prevalence of small-pox. This disease destroyed 108 lives.

584; 1. NEATH; *Margam*.—Births 193; Deaths 131. Small-pox is prevalent; I have registered 12 deaths from it in the quarter.

584; 2. NEATH; *Neath*.—Births 119; Deaths 12. 12 deaths arose from small-pox.

585; 2. SWANSEA; *Llangafelach*.—Births 111; Deaths 108. 12 deaths from small-pox, 14 from scarlatina.

585; 3. SWANSEA; *Swansea*.—Births 285; Deaths 164. Small-pox continues very prevalent, and the deaths have been registered from that cause. The greater part occurred to unvaccinated subjects.

592; 2. HAVERFORDWEST; *Haverfordwest*.—Births 118; Deaths 107. The deaths are above the average owing to the prevalence of small-pox.

592; 4. HAVERFORDWEST; *Fishguard*.—Births 45; Deaths 45. Small-pox has been prevalent, and it was fatal in 4 cases.

601; 2. CRICKHOWELL; *Llangunider*.—Births 34; Deaths 34. The deaths are above the average of corresponding quarters. Small-pox has been prevalent, and 10 fatal cases were registered. Typhus and scarlatina have also prevailed to some extent.

44. NORTH WALES.

612; 2. RUTHIN; *Ruthin*.—Births 31; Deaths 31. The prevalence of small-pox from contagion in the neighbourhood, coupled with severe cases of fever, has caused the deaths to exceed the births.

[The following Index furnishes a reference to the *Number* of each DISTRICT in the Tables of Marriages, Births, and Deaths contained in this Return. Any District in the Registrars' Notes may be found in the same manner. In forming the alphabetical arrangement, the principle adopted has been to place compound names in the order in which they are pronounced.]

QUARTERLY RETURN
OF
THE MARRIAGES, BIRTHS, AND DEATHS
REGISTERED IN THE DIVISIONS, COUNTIES, AND DISTRICTS OF
ENGLAND.

By Authority of the Registrar General.

PUBLISHED BY EYRE AND SPOTTISWOODE, 9, EAST HARDING ST., FETTER LANE, E.C.

No. 38.]

*Marriages, January, February, March, 1858.
Births and Deaths, April, May, June, 1858.*

[Price 4d.

*General Register Office, Somerset House,
29th July 1858.*

THIS Return comprises the BIRTHS and DEATHS registered by 2196 Registrars in all the districts of England during the spring quarter that ended on June 30th, 1858; and the MARRIAGES in 12,283 churches or chapels, about 3968 registered places of worship unconnected with the Established Church, and 629 Superintendent Registrars' offices, in the quarter that ended on March 31st, 1858.

The gloomy appearance of the winter quarter is gradually giving place to a better state of things. The marriages in that quarter were much below the average, and in the spring quarter the births were slightly below the average. But the public health in the spring quarter exhibited signs of improvement.

MARRIAGES.

30,034 marriages took place in the quarter that ended on March 31st; and consequently 60,068 persons married in the three months. The number is less by

6700 than the numbers of persons who married in each of the winter quarters of the two previous years, and is rather more than the number of persons who married in the hard war winter of 1855. The marriage-rate of the quarter was 1·254 per cent. per annum; or at such a rate, if it continued uniform, that 1254 persons would marry in a year to every 100,000 persons living. The average rate is 1·410, and the rate of the quarter is such, that *one* out of every 9 marriages was deferred, or broken off. The stagnation of trade had cast a shadow over the prospects of the people, and they did not marry. The inhabitants of the manufacturing districts were under the greatest depression; and the number of marriages in Cheshire and Lancashire fell from 5821 to 4793, more than a thousand; but all the parts of England and Wales are so intimately associated in evil as well as in good fortune that in every division the marriages declined. It is to be regretted that the returns of marriages in the spring quarter cannot be obtained from the clergy in time for publication with the returns of births and deaths for this quarter; otherwise it is probable that some improvement might be apparent.

BIRTHS.

The births of 169,170 children were registered in the quarter ending on June 30th, 1858; and the birth-rate was 3·482 per cent. per annum. It was slightly below the average rate of the spring season. The births decreased, or were stationary in every division.

INCREASE OF POPULATION.

169,170 births and 107,193 deaths were registered; and the natural increase of the population of England and Wales was 61,977 in 91 days; or 681 daily.

The probable natural increase of the population of the United Kingdom was 1021 daily. In the preceding winter quarter it was estimated at 750.

40,961 persons sailed from the ports of the United Kingdom at which there are Government emigration agents. After distributing proportionally 4084 of undistinguished birth place, it appears that 1930 were of foreign, while 20,077 were of Irish, 4702 of Scotch, and 14,252 of English origin. Of the English

* The Table may be read thus, without reference to the decimal points:—In the year 1848 to 100,000 of the population of England there were 1594 persons married, 3247 births, 2306 deaths registered.—The annual rates of marriage in each of the four quarters were 1·322, 1·610, 1·510 and 1·922 per cent.; the rates of death 2·794, 2·313, 2·005, and 2·108 per cent. In reading the population on the first line add 3 ciphers (000). The 3 months January, February, March, contain 90, in leap year 91 days; the 3 months April, May, June, 91 days; each of the last 2 quarters of the year 92 days. For this inequality a correction has been made in the calculation.

emigrants, 5717 sailed to the Australian colonies, 1543 to the North American colonies, 6218 to the United States, and 774 to other places.*

The emigration is still decreasing; it was at the rate of 157 daily from England and Wales, 429 daily from the inhabitants of the United Kingdom. In the spring quarter of 1852, six years ago, 1375 of the people emigrated daily.

THE WEATHER AND THE PRICE OF PROVISIONS.

The mean temperature of April (46°) and May (52°) differed little from the average at Greenwich; June was hot throughout, and its temperature (65°) was 7° above the average. On the 16th of June the temperature near the sea rose as high as 88° , and reached the point 95° between the latitudes 51° and 52° . The mean temperature of the day was 77° ; which is the highest temperature in June on record. Saturation being represented by 100, the degree of humidity in June was 67; so the air was dry, or 7° less humid than it was during 17 previous Junes. The rain-fall above the average in April and May was below the average in June. The rain-fall in the three months was 5.4 in. The air moves usually at the rate of 4 miles an hour on an average; it moved at the rate of less than a mile and half an hour in June. The mean temperature of the Thames from 55° in May rose to 67° in June. The meteorology of the different parts of the country is shown in Mr. Glaisher's Tables.

† Note.—The total number of quarters of wheat sold in England and Wales for the 13 weeks ending June 30th, 1856, 1,364,370; for the 13 weeks ending September 30th, 1856, 1,016,704; for the 13 weeks ending December 31st, 1856, 1,467,816; for the 13 weeks ending March 31st, 1857, 1,331,623; for the 13 weeks ending June 30th, 1857, 1,402,051; for the 13 weeks ending September 30th, 1857, 1,198,029; for the 13 weeks ending December 31st, 1857, 1,313,321; for the 13 weeks ending March 31st, 1858, 1,294,855; and for the 13 weeks ending June 30th, 1858, 1,208,420. The total number of quarters entered for Home Consumption was respectively 820,201; 1,531,489; 1,446,588 (11 weeks); 667,027; 548,315; 710,992; 1,242,628; 840,475; and 1,125,165.

* From a Return with which the Registrar General has been favoured by the Emigration Commissioners: the number returned as of English origin was 12831, while the birthplace of 4084 was not distinguished; in the above statement a proportional number of these have been added to those returned as of English origin.

The prices of the principal articles of food have followed different rates: the price of the quarter of wheat has regularly fallen in the three months of April, May, June of the years 1856, 1857, and 1858, from 68s. 8d. to 56s. 9d., and to 44s. 1d. a quarter; by the carcass at Leadenhall and Newgate Market beef was 5 $\frac{2}{8}$ d., 5 $\frac{3}{8}$ d., and 5 $\frac{1}{8}$ d.; and mutton 5 $\frac{7}{8}$ d., 5 $\frac{6}{8}$ d., and 5 $\frac{4}{8}$ d. a pound. While the price of wheat fell the price of potatoes (York regents) rose from 80s. and 128s. to 163s. a ton, at the waterside market, Southwark. The prices of animal food declined, the price of wheat fell 36 per cent.; the price of potatoes rose more than 100 per cent. in the interval.

STATE OF THE PUBLIC HEALTH.

107,193 persons died in the three months of April, May, and June; the deaths were at the rate of 1178 daily.

The mortality rate prevailing was 2·206 per cent. or 22·06 in 1000. This is slightly below the average rate, 22·25, of the ten preceding spring quarters.

The average death rate of the sixty-three least unhealthy districts is 17 in 1000; and the mortality of England, corrected for age, should be 16 $\frac{1}{3}$; but the actual rate in the quarter was 6 in excess of this rate. The 27,355 deaths in excess are principally deaths from various kinds of poisons, and are therefore properly designated Unnatural Deaths.

Upon dividing the population into two portions, (1) the 8,247,017 people living in rather close proximity to each other, and (2) the 9,680,592 living much further apart, the result, as shown in the annexed Table is that the mortality in the dense districts was at the rate of 24·73—nearly 25 in 1000; while in the other districts over which small towns and villages are distributed, the mortality was at the rate of 19·68, nearly 20 in 1000 of the population.

In the town districts the rate of mortality was 8, in the rest of the country 3, in 1000 above the rate which actually rules in comparatively healthy districts. Of the 27,355 unnatural deaths, 18,668 took place in the large town districts; 8687 in other places.

Now in England and Wales the town population is increasing much faster than the population of the rest of the country; and the question is therefore becoming every day graver:—How is the health of the nation to be sustained in the midst of the new dangers which millions of its people are encountering?

In the last spring quarter, while the mortality of the country districts decreased, the mortality of the town districts rose to 24·73, the average of the preceding ten

DEATHS in the Spring Quarters 1848–58.

years having been 23·94 in 1000. This was probably due partly to the reduced earnings in the towns, to the scarcity of potatoes, and to the intense heat, which accelerated the putrefaction of organic refuse in the houses, streets, ditches and rivers.

Is the actual mortality of cities inevitable? The Turks reply in the affirmative. Many of the cities of Europe in which the death-rate ranges from 30 to 40 acquiesce quietly in their fate; and in England, where we have adopted another course, it has been, not without some show of reason, asserted that the unnatural deaths in towns are the penalties of civilization. But what is civilization? If it consist simply in the aggregation of families on limited areas, without arrangements to meet the exigencies of their new position, it will ever have heavy penalties to pay. Uncleanliness is, however, not a consequence of civilization; it is a relic of barbarism. The people of districts living in England wide apart experience generally a low mortality, and the mortality increases in proportion as their dwellings are brought into closer proximity. People remaining the same, and indulging in the same habits, collected from their scattered habitations into a camp, and kept in that camp for some months, suffer from diseases, and are ultimately decimated by epidemics. Our towns were no better than uncleansed camps in the middle ages; and London in the seventeenth century lost 50 in 1000, or, including the plague years, 80 in 1000 of its inhabitants annually. The black death, sweating sickness, and plague followed each other in succession. The mortality of London was reduced to the rate of 29 in 1000 at the beginning of this century*; civilization advanced, and in the 15 years 1840-54, the rate further fell to 25†, still remaining 10 in 1000 above the calculated healthy rate for London. As Athens in ancient story had to send seven of its youth, chosen by lot, to be devoured, so London has hitherto given up *ten* of every thousand of her inhabitants yearly to disease and untimely death. All the towns of the kingdom in the aggregate gave up proportionally this number of victims in the last three months. They were not destroyed openly. The poison by which they died was not purchased in chemists' shops. It was administered in the silence of the night, and in the streets at noonday, either with the air which they breathed, or with the water which they drank.

The poison is generated by the decomposition of effete organic matter, which gives off diffusible and dangerous products, wherever it is left beyond a day in the houses, streets, and neighbouring ditches or streams, instead of being lodged in the disinfecting earth.

It can easily be shown that the mortality bears a certain proportion to the quantity of the poison which the people inhale; and that the quantity is greatest under the cesspool system, which formerly prevailed in London, and is now in use in the French, German, and Italian towns. The mortality has gradually fallen in London as the cesspools have been abolished; it is still high in foreign cities where the cesspools are in use. In Manchester, where the dirt is allowed to decay behind the houses, and is not thrown into sewers, the mortality was at the rate of 33, in the years 1841-50; in the foreign cesspooled cities the mortality ranges from 30 to 44 in 1000.

Of 1000 people in London, *ten* died unnatural deaths annually; and to make the view of the facts clear, let it be assumed for a moment that into the causes of *four* deaths no inquiry is now made, that *three* are killed by the poisonous emanations from cesspools, closets, and sinks in dwelling houses, offices, and workshops, that *two* die of diseases induced by the emanations from dirty streets or gullies, and *one* from the vapours arising from the Thames. Here evidently a great step is gained by the water system superseding the cesspool, as the noxious matter is projected into the sewers under the streets, and is partially oxydized. If the cesspools, therefore, are everywhere abolished, and the house is purified, the mortality,

* See M'Culloch's Statistics of the British Empire, Vol. 2., p. 613.

† The people in early and middle life are so numerous in London, owing to the excess of births and immigration, that the mortality should be 15 in 1000 to be at the several ages, at the same rate as it is in the healthy districts, where the mean lifetime is 49 years. The corrected rate of mortality is 20 in 1000, and the actual uncorrected rate in those districts is 17 in 1000.

on the above hypothesis, will be reduced to the extent of 3; while if the corrupt sewer air in the sewers be carried above the chimneys beyond the reach of the lungs, *two* more lives will be saved; and if the water and banks of the Thames are no longer the final repositories of the town guano, *one* more life will be saved. These numbers are adopted, not as expressing exact results, but to fix attention on the fact that the impurities of London are the main causes of its insalubrity; and that in their fatal effects they may be classed in this order, (1) impurities of dwellings, (2) impurities of streets and gullies, (3) impurities of the Thames.

The progress of sanitary measures in London has hitherto resulted in the removal of the impurities from the dwelling houses into the sewers and the Thames, and this enables us to understand how the mortality has declined as the Thames has grown fouler. It also enables us to understand how the mortality of London is lower than the mortality of many other cities.

The wise policy of substituting streams of water for cesspools is fully confirmed; and experience has shown that the town guano is less hurtful in the sewers and in the rivers than in the dwellings of the people. It is only when the supply of towns is drawn from the rivers saturated with foul organic matter that the people are poisoned in great numbers by water. The vapors of the Thames, noxious as everybody possessed of common sense has now learnt to consider them, are less heavily laden with poisonous exhalations than the vapors of cesspools and sewers. The practice of laying on water, and of abolishing cesspools should therefore be actively continued. At the same time steps should be taken to destroy or to deliver the exhalations of the sewers into the higher stratum of the atmosphere, where they would be partly destroyed, and would not be breathed, as they are now, undiluted. The Thames itself must be purified. Our present imperfect system of sewers admits of readjustment; but the country can never rest satisfied until the water which is distributed through its dwellings carries away all the town guano to fertilize the land, from which its materials were derived. Any other solution of the sewage question is provisional.

Exact observation for twenty years in every district of England and Wales places the question fairly before the country. Impure air is destroying the health of the people. The atmosphere in which they live can be purified by restoring the town guano to the fields. This involves a large immediate outlay; but the expense is not beyond the means of England. It will not exhaust the resources of a nation which freely devoted eighty millions sterling to resist the encroachments of Russia on the Turkish Empire; which maintains a squadron on the coast of Africa in the hope of diminishing the slave trade; which proposes, after conquering, to govern, perhaps to civilise India; and which has now a fleet on the other side of the globe opening the Chinese Empire to the enterprise of the world. If capital is sunk freely on these vast distant objects in the hope of realising returns, it will not fail when it is required to purify the air Englishmen breathe at home; for the investment will be profitable to all living men, and will confer blessings on all future generations. And if the national honour was concerned on the shores of the Black Sea, in the Baltic, on the Coast of Africa, in India, in the Chinese waters, in the presence of the enemy, is not the honour of England also concerned when the lives of her children are in peril, and no arm is stretched out to save? Can our towns strike their colours to their own accumulating dirt, and avow that they are vanquished, without ignominy? England is in sanitary science and art taking the lead in Europe, and teaching important lessons to all nations. But the work must be consummated. The mortality must be reduced. The people must be animated anew by the energies of health. And public men will find that some glory may be gained by saving life,—by great sanitary works. Honour will crown those who rescue the English race from pain, sickness, and degeneracy. They will for ever enjoy the satisfaction of having done their duty.

The Legislature has, in the Acts of the present Session, given the inhabitants of every district of England and Wales the power to raise the money and to execute the great works which the country requires; and it may be sanguinely hoped that the new powers will be employed to their full extent by the people themselves, under the Public Health and the Local Government Acts. The results will in a few years be apparent in the public registers.

* The Registration Counties consist of groups of entire Registration Districts ; which Districts are, in general, identical with the Poor Law Unions. As the principle adopted has been to place a District or Union which extends into more than one County with the County in which either the principal town or the greater part of the population is located, the limits of the Registration Counties differ more or less from the boundaries of the Counties proper.

MARRIAGES Registered in the Quarters ending 31st March 1856—1858; BIRTHS and DEATHS Registered in the Quarters ending 30th June 1856—1858; in the DIVISIONS, REGISTRATION COUNTIES, and DISTRICTS of ENGLAND—*continued.*

* The *Districts* are collections of contiguous Parishes or Places, generally identical with the Poor Law Unions of the same names; they are 629 in number, and are here arranged topographically under the Registration Counties.

† A slight change was made in these Districts in March 1858.

‡ The Hamlet of Mile End Old Town, which formed part of the Stepney District prior to 1st October 1857, is now a distinct and separate District. For the sake of comparison the births and deaths in Mile End Old Town prior to 30th September 1857 are stated for the present limits; for the marriages, the numbers of which have not been separately ascertained, a joint return is made.

* A change was made in these districts in November 1857.

† The number of districts is increased to 629 by the formation of the following new districts: Mile End Old Town (24 b) Dulverton (313 b), Whitechurch, Salop (363 b), Great Ouseburn (492 a), Wetherby (492 c), and Hemsworth (504 b).

Remarks on the weather, during the Quarter ending June 30th, 1858. By JAMES GLAISHER, ESQ., F.R.S., &c., Sec. of the British Meteorological Society.

April.—Till the 14th the air was cold, being 4°·2 below the average; from the 15th to the 26th it was warm, the average excess being 5°·9; and it was then cold again to the end of the month, being 1°·6 below the average. The mean high day temperature was 57°·6, exceeding the average by 0°·6; and the low night temperature was 38°·0, being 0°·9 deficient from the average. The mean temperature of the month was nearly of its average value.

May was cold till the 15th, being 4°·1 deficient from the average; it then became warm until the 24th, averaging 1°·2 in excess; from the 25th to the 28th it was again cold, being 2°·4 below the average; and then till the end of the month it was hot, the average excess being 7°·6. The mean high day temperature was 63°·7, being 0°·7 below the average; and the low night temperature was 42°·8, being 1°·4 deficient from the average value. The mean temperature of this month was about 1° lower than the average.

June was hot throughout, the average excess being 6°·0. The mean high day temperature of this month was 79°·5, being 8°·6 above the average; and the mean low night temperature was 53°·9, being 4° above the average. The mean temperature of this month has been but once exceeded since the year 1771, a period of 87 years; viz., in the year 1846, when it was 65°·3.

On the 16th of June the temperature near the sea rose as high as 88°, and between the latitudes 51° and 52° reached the point 95°. The mean temperature of this day at Greenwich was 76°·9, and there is no previous instance of so high a mean temperature in the month of June.

The mean temperature of the dew-point was below its average in April and May, and 3° above its average in June. This latter month was less humid than usual, the excess of air temperature over the average being greater than that of dew-point temperature.

The mean reading of the Barometer was in defect in May, and above the average in April and June; the mean reading for the latter month being the highest during the last 17 years.

The fall of rain was in excess in the months of April and May, and in defect in June; but was about the average value for the quarter.

Thunderstorms were very prevalent in June, and some were particularly violent. Mr. Eaton of Little Bridy reports a storm of unparalleled violence having occurred on the 10th in the north-west parts of Dorsetshire. The lightning and thunder, he says, were more terrific than any that had occurred since July 1808. The Rev. John Slatter of Rose Hill writes, June 16th, A most furious storm at this place at 9.45 A.M. from the W. and N.W. A violent hurricane preceded it, and the rain was slow to come, and not remarkable (about half an inch); but the lightning flashed 14 times in about 30 seconds, and the thunder was incessant. I never witnessed such elemental fury. No damage was done here beyond striking a fine elm tree, but elsewhere it was very mischievous.

The mean temperature of the air at Greenwich for the quarter ending May, constituting the three spring months, was 46°·4, being exactly of the average value.

NOTE.—In reading this table it will be borne in mind that the sign (—) minus signifies below the average, and that the sign (+) plus signifies above the average.

Thunderstorms occurred or thunder was heard and lightning seen on the 3d of April at Berk-hampstead, Holkham, and York; on the 16th at Osborne, Fairlight, Lewisham, Greenwich, St. John's Wood, Battersea, Whitehall, Camden Town, Paddington, Rose Hill, Oxford, Hartwell House, Hartwell Rectory, Gloucester, Cardington, Hereford, Bedford, and Holkham; on the 17th at Bicester, Berkhamstead, and Cardington; on the 20th at Bicester; on the 23d at Helston; on the 24th at Leeds and York; on the 28th at Little Bridy, Manchester, and Wakefield; and on the 30th at Rose Hill, Bicester, Hartwell House, Bedford, Scarborough, North Shields, and Allenheads. On the 2d of May at Berkhamstead and Hartwell House; on the 10th at Clifton; on the 11th at Teign-

mouth, Exeter, and Little Bridy; on the 12th at Teignmouth; on the 13th at Teignmouth, Oxford, Berkhamstead, Hartwell House, Hartwell Rectory, Gloucester, Cardington, and Hereford; on the 14th at Stonyhurst and North Shields; on the 15th at Hawarden, Stonyhurst, and York; on the 16th at Camden Town, Gloucester, Cardington, Bedford, and Holkham; on the 17th at Manchester and North Shields; on the 19th at Hartwell House and Hartwell Rectory; on the 21st at North Shields, Bywell, and Allenheads; on the 22d at Gloucester, Stonyhurst, and York; on the 23d at Gloucester, Grantham, Belvoir, Holkham, Nottingham, and York; on the 24th at Whitehall; and on the 25th at Bedford and Nottingham. On the 2d of June at Fairlight, Battersea, Paddington, Oxford, Belvoir, and Nottingham; on the 3d at Clifton, Rose Hill, Hartwell House, Hartwell Rectory, Gloucester, Hereford, Bedford, Holkham, Nottingham, Manchester, Wakefield, York, Scarborough, North Shields, Bywell, and Allenheads; on the 4th at Guernsey and Paddington; on the 5th at Fairlight, Lewisham, Greenwich, St. John's Wood, Whitehall, Camden Town, Berkhamstead, Hartwell Rectory, Royston, Cardington, Bedford, and Holkham; on the 7th at Guernsey, Teignmouth, Little Bridy, Paddington, and Lampeter; on the 8th at Guernsey, Teignmouth, Exeter, Osborne, Fairlight, Little Bridy, Barnstaple, Clifton, Greenwich, St. John's Wood, Battersea, Whitehall, Rose Hill, Oxford, Berkhamstead, and Lampeter; on the 9th at Exeter, Cardington, Bedford, Belvoir, Hawarden, Wakefield, and York; on the 10th at Teignmouth, Little Bridy, and Barnstaple; on the 11th at Exeter, Barnstaple, Paddington, Lampeter, and Manchester; on the 12th at Paddington, Royston, Hereford, Lampeter, Belvoir, Holkham, Nottingham, Hawarden, Liverpool, Manchester, and Allenheads; on the 13th at Guernsey, Osborne, Fairlight, and Wakefield; on the 15th at Teignmouth, Fairlight, Clifton, Hereford, Lampeter, Hawarden, Liverpool, Manchester, Wakefield, Stonyhurst, Silloth, Bywell, and Allenheads; on the 16th at Osborne, Fairlight, Clifton, Rose Hill, Oxford, Berkhamstead, Cardington, Hereford, Bedford, Hawarden, Liverpool, Stonyhurst, York, North Shields, Silloth, Bywell, and Allenheads; on the 17th at Royston, Bedford, Liverpool, Wakefield, Stonyhurst, York, Silloth, and Allenheads; and on the 18th at Manchester.

Thunder was heard but lightning was not seen. On the 3d of April at Lewisham, Greenwich, and Grantham; on the 13th at Helston; on the 16th at Rose Hill and Berkhamstead; on the 23d at Helston; on the 24th at Gloucester, Nottingham, Hawarden, and Liverpool; on the 25th at Hartwell Rectory; on the 28th at North Shields; on the 29th at Fairlight; and on the 30th at Hartwell Rectory, Cardington, Belvoir, Hawarden, and Bywell. On the 1st of May at Hawarden, Stonyhurst, and Silloth; on the 2d at Fairlight and Hartwell Rectory; on the 3d at Rose Hill and Hartwell Rectory; on the 4th at Oxford; on the 8th at Bywell; on the 10th at Barnstaple; on the 12th at Oxford, Hartwell Rectory, and Hawarden; on the 13th at Osborne, Little Bridy, Greenwich, Whitehall, Rose Hill, and Hereford; on the 14th at Bywell and Allenheads; on the 15th at Grantham; on the 16th at Grantham, Belvoir, Nottingham, Liverpool, North Shields, Bywell, and Allenheads; on the 18th at Cardington and Leeds; on the 19th at Lewisham, Greenwich, Berkhamstead, and Cardington; on the 21st at Stonyhurst; on the 23d at Camden Town, Berkhamstead, Hartwell Rectory and Lampeter; on the 25th at Cardington; on the 26th at Grantham and Belvoir; and on the 30th at Nottingham. On the 2d of June at Guernsey, Gloucester, Lampeter, and Allenheads; on the 3d at Little Bridy, Hereford, and Lampeter; on the 5th at Fairlight, Rose Hill, Hartwell House, and Royston; on the 6th at Guernsey and Hawarden; on the 7th at Fairlight; on the 8th at Belvoir, Hawarden, and Silloth; on the 9th at Hereford, Liverpool, Stonyhurst, North Shields, and Silloth; on the 11th at Hereford; on the 12th at Clifton, Rose Hill, Berkhamstead, Hartwell House, Hartwell Rectory, Cardington, Hereford, and Bywell; on the 13th at Berkhamstead and Hartwell House; on the 14th at Hartwell House; on the 15th at Exeter, Fairlight, Little Bridy, Barnstaple, Hartwell House, Royston, Lampeter, and North Shields; on the 16th at Little Bridy, Berkhamstead, Hartwell House, Hartwell Rectory, and Belvoir; on the 17th at Cardington, Holkham, North Shields, Bywell, and Allenheads; on the 18th at Liverpool; on the 19th at Belvoir; on the 23d at Silloth; on the 24th at Rose Hill; and on the 30th at Lewisham and Greenwich.

Hail fell on 9 days in April; on 15 in May; and on 7 in June.

Lightning was seen but thunder was not heard. On the 5th, 14th, and 17th of April in the south of England; and on the 15th and 16th in the Midland Counties. On the 1st, 7th, 10th, and 31st of May in the south, and on the 17th, in the north of England. And from the 2d to the 17th of June generally throughout the country.

Fog was prevalent on 23 days in April; 16 days in May; and 16 days in June; at the different stations during the quarter.

Snow fell on the 1st of April at Fairlight, Little Bridy, Hawarden, Leeds, Stonyhurst, and Allenheads; on the 2d at Exeter, Fairlight, Clifton, Lewisham, Greenwich, Whitehall, Rose Hill, Oxford, Bicester, Berkhamstead, Hartwell Rectory, Gloucester, Royston, Cardington, Hereford, Lampeter, Belvoir, Nottingham, Hawarden, and Allenheads; on the 3d at Allenheads; on the 5th at Little Bridy, and Clifton; on the 6th at Fairlight; on the 7th at Grantham, Hawarden, Wakefield, Leeds, North Shields, Silloth, Bywell, and Allenheads; on the 8th at Battersea, Oxford, Grantham, Belvoir, Hawarden, Wakefield, Leeds, and Stonyhurst; on the 9th at Greenwich, Rose Hill, Bicester, and Hereford; on the 10th at Fairlight and Leeds; on the 11th at Grantham, Holkham, and Allenheads; on the 12th at Royston, Grantham, Bywell, and Allenheads; and on the 30th at Little Bridy, Grantham, Wakefield, and Allenheads. On the 1st and 2d of May at Allenheads.

Solar Halos were seen on 11 days in April; 18 in May; and on 11 in June, at different places.

Lunar Halos were seen on 14 different occasions during the quarter.

Aurora was seen on the 1st of April at Rose Hill; on the 9th at Little Bridy, Cardington, Grantham, Nottingham, Hawarden, Liverpool, Manchester, Wakefield, Stonyhurst, York, North Shields, Silloth, and Allenheads; on the 10th at Clifton, Oxford, Hartwell House, Hartwell Rectory, Cardington, Grantham, Hawarden, Wakefield, North Shields, Silloth, and Allenheads; on the 11th at Clifton; on the 12th at Silloth; on the 24th at Fairlight; and on the 29th at Clifton. On the 2d and 6th at Clifton; on the 7th at Clifton and Oxford; and on the 8th and 10th at Clifton. On the 6th of June at Oxford.

NAMES OF STATIONS.	Mean Pressure of dry Air reduced to the level of the Sea.	Highest Reading of the Thermometer.	Lowest Reading of the Thermometer.	Range of Temperature in the Quarter.	Mean of all Highest.	Mean of all Lowest.	Mean Monthly Range of Temperature.	Mean Daily Range of Temperature.	Mean Temperature of the Air.	Mean Temperature of the Dew Point.	Mean Elastic Force of Vapour.	Mean Weight of Vapour in a cubic foot of Air.	Mean additional Weight required for saturation.	Mean degree of Humidity.	Mean Weight of a cubic foot of Air.	Mean Reading of Maximum in rays of Sun.	Mean Reading of Minimum on Grass.	Mean estimated Strength.	WIND.				Mean Amount of Ozone.	Mean Amount of Cloud.	Number of Days on which it fell.

The Observations have been reduced to Mean values by Glaisher's Barometrical and Diurnal Range Tables, and the Hygrometrical results have been deduced from his second edition of Hygrometrical Tables.

Year 1858.	Names of Stations and Observers.	Pressure of Atmosphere in Month.		Temperature of Air in Month.				Mean Temperature.		Vapour.		Mean Degree of Humidity, dity. Sat. = 100. REGISTRARS' NOTES.

In compliance with the following instruction, remarks have in many instances been appended by the Registrars to their Returns; from which the following Notes have been selected. The Registrars alone must be considered responsible for the opinions which they express.

INSTRUCTION TO REGISTRARS:—

"If the Deaths registered during the quarter have been above or below the average, mention whether the state of sanitary arrangements, movement of the population, the weather, prevalence or decline of Small-pox, Measles, Scarlatina, Hooping-cough, Typhus, Cholera, Bronchitis, or other disease,—more or less attention to Vaccination and other measures—does, in your opinion, wholly or partially account for the fact. Also with regard to increase or decrease of Births, you may mention any circumstance to which it may be attributed. By 'Average' must be understood *not* the average of numbers in other quarters of the year, but the average of *corresponding* quarters in four or five previous years."

The figures prefixed refer to the numbers of the District and Sub-District. The name of the District is in SMALL CAPITALS, that of the Sub-district in *italics*.

II. SOUTH-EASTERN COUNTIES.

2. KENT (*Extra-metropolitan*).

65; 1. CANTERBURY; *Canterbury*.—Births 97; Deaths 99. Diphtheria and measles very prevalent, and in many cases fatal.

3. SUSSEX.

75; 1. RYE; *Rye*.—Births 40; Deaths 86. The prevalence of scarlatina and measles has augmented the mortality considerably,

4. HAMPSHIRE.

96; 1. PORTSEA ISLAND; *Kingston*.—Births 216; Deaths 156. The deaths are 40 above those of the corresponding quarter of last year. The increase is principally attributable to the prevalence of fever and small-pox.

97; 1. ALVERSTOKE; *Alverstohe*.—Births 180; Deaths 148. 29 deaths from measles and 9 from small-pox have been registered during the quarter.

98; 1. FAREHAM; *Fareham*.—Births 51; Deaths 58. 3 deaths from diphtheria.

117; 1. WHITCHURCH; *Whitchurch*.—Births 53; Deaths 39. The average of deaths in corresponding quarters of four previous years is 26. Diphtheria has been fatal in 9 cases; it has now disappeared, and the district is healthy.

III. SOUTH MIDLAND COUNTIES.

6. MIDDLESEX (*Extra-metropolitan*).

133; 2. UXBRIDGE; *Uxbridge*.—Births 43; Deaths 10. The Local Board of Health by supplying water and causing water-closets to be made throughout the district, and enforcing other sanitary arrangements, has no doubt improved the health of the town. Only five deaths have occurred in Uxbridge in the quarter.

134; 5. BRENTFORD; *Acton*.—Births 35; Deaths 34. Sixteen of the deaths occurred in the Central London district school, of which 13 were from mesenteric disease, and the remainder from phthisis. The school is a new building erected in the parish of Hanwell, in a fine open part of the country. It is calculated to accommodate upwards of 1500 pauper children, and I am informed there are at present upwards of 1300 children in it.

7. HERTFORDSHIRE.

144; 1. ST. ALBANS; *Harpenden*.—Births 52; Deaths 41. The deaths are above the average. Measles which is followed by hooping-cough is still in the district. 12 deaths from measles have been registered.

12. BEDFORDSHIRE.

183; 1. LEIGHTON BUZZARD; *Leighton Buzzard*.—Births 74; Deaths 51. 3 cases of small-pox were fatal in one family.

13. CAMBRIDGESHIRE.

193; 4. WISBECH; *Terrington St. Clement*.—Births 73; Deaths 17. The deaths are below the average, owing partly I believe to better drainage. The sub-district is healthy at present; ague not quite so prevalent.

IV. EASTERN COUNTIES.

14. ESSEX.

198; 2. ORSETT; *Orsett*.—Births 40; Deaths 37. In this district the disproportion in the deaths of males and females is owing in many instances to "men unknown" being washed ashore. For the same reason the death-rate obtained from the registers is raised, so as to make the locality appear more unhealthy than it is.

202; 5. MALDON; *Tollesbury*.—Births 26; Deaths 12. The number of deaths is unusually small, notwithstanding that ague is very prevalent, and more so than it has been for years. An old gentleman of 93 years has had several attacks, although he has lived in the neighbourhood all his life.

203; 2. TENDRING; *Thorp*.—Births 59; Deaths 45. The births and deaths are above their averages. Typhus and scarlatina with fever of a typhoid character and ague have prevailed in the neighbourhood. The weather has no doubt had some effect on these diseases, and in some instances more attention to sanitary arrangements would be beneficial.

16. NORFOLK.

228; 1. YARMOUTH; *Southern*.—Births 101; Deaths 83. The deaths registered during the quarter have been above the average, arising from the prevalence of scarlatina; 24 deaths having been caused by that disease.

228; 2. YARMOUTH; *Northern*.—Births 141; Deaths 40. The deaths are very much above the average for the corresponding quarters of 1855-6-7, which is 68. This increase is attributable to scarlatina, which has been very prevalent. I have also registered many cases of measles.

230; 3. TUNSTEAD; *Stalham*.—Births 26; Deaths 1. Diphtheria and scarlatina were prevalent and fatal. Sanitary arrangements are quite neglected.

236; 1. HENSTEAD; *Humbleyard*.—Births 49; Deaths 34. The deaths are rather more than the average, scarlatina and typhus having been prevalent amongst children.

240; 2. GUILTCROSS; *Kenninghall*.—Births 53; Deaths 42. Scarlatina was prevalent and caused 14 deaths in the parish of Kenninghall; it is now on the decline.

246; 1. KING'S LYNN; *North*.—Births 36; Deaths 23. Intermittent and remittent fevers have been very prevalent during the past quarter, and even now have not entirely subsided. This may be partly attributed, I think, to the warping up of the arm of the river cut off by the Estuary works.

V. SOUTH-WESTERN COUNTIES.

17. WILTSHIRE.

257; 2. MELKSHAM; *Trowbridge*.—Births 98; Deaths 49. In the above number of deaths, 7 were from measles, which I am informed by a medical man is becoming very prevalent in this sub-district.

259; 3. WESTBURY; *Westbury*.—Births 60; Deaths 5. The increase in the deaths is attributable to the great mortality amongst children, occasioned by measles.

260; 1. WARMINSTER; *Warminster*.—Births 55; Deaths 33. Measles very prevalent in this sub-district, and fatal to many children.

18. DORSETSHIRE.

273; 3. WAREHAM; *Wareham*.—Births 51; Deaths 39. There have been 6 deaths from fever in the parish of East Lulworth, which disease has prevailed to a considerable extent in that place.

276; 2. SHERBORNE; *Sherborne*.—Births 35; Deaths 52. The deaths during the quarter have been considerably above the average, arising from the prevalence of scarlatina.

19. DEVONSHIRE.

279; 1. AXMINSTER; *Lyme*.—Births 38; Deaths 33. The deaths are above the average, in consequence of the prevalence of small-pox and hooping-cough. 7 fatal cases of confluent small-pox have occurred, and 6 of hooping-cough. All those of the former disease, except one, were without previous vaccination. The prevalence of small-pox has alarmed the inhabitants, who are getting their children vaccinated as fast as they can. Many adults are being re-vaccinated. Two of our surgeons are vaccinating the poor gratis, so that every facility is given to stay the progress of the disease.

279; 2. AXMINSTER; *Arminster*.—Births 39; Deaths 24. Small-pox has appeared in a few dwellings within my district, but no death therefrom has occurred. The number of adults and children vaccinated within my district during the last six weeks has been unusually large.

281; 3. ST. THOMAS; *Woodbury*.—Births 34; Deaths 28. The deaths are much above the average of corresponding quarters; many deaths are from measles and pneumonia, which have been very prevalent.

293; 4. TIVERTON; *Tiverton*.—Births 71; Deaths 39. The deaths are remarkably few, being 30 below the average of the preceding 5 years. The register shows the entire absence of epidemic diseases.

295; 4. BARNSTAPLE; *Ilfracombe*.—Births 40; Deaths 24. The deaths have increased in consequence of scarlatina in a part of my district at the village of Berrynarbor, where 8 children have died from this complaint, 3 in one house (all of these after less than 24 hours' illness) and 2 in another. The deaths in the town of Ilfracombe are below the average, sanitary arrangements having been well attended to.

297; 1. BIDEFORD; *Bideford*.—Births 54; Deaths 39. The deaths are 12 above the average. Scarlatina has prevailed in the district, but it has not been so general or fatal as in the two preceding quarters. 10 deaths have been registered from that cause.

297; 2. BIDEFORD; *Northam*.—Births 30; Deaths 24. The deaths are 8 above the average, owing to 10 having occurred from scarlatina.

21. SOMERSETSHIRE.

315; 1. TAUNTON; *Pitminster*.—Births 49; Deaths 25. Small-pox was prevalent, but it is now on the decline; no fatal case in the district.

315; 3. TAUNTON; *St. Mary Magdalen*.—Births 93; Deaths 86. The deaths are above the average. Small-pox has been very prevalent, and of a most virulent character. Vaccination, or re-vaccination, has been generally adopted, and, in my experience, has proved a protection under the most unfavourable circumstances. I have vaccinated more than a thousand persons during the quarter.

315; 4. TAUNTON; *St. James*.—Births 76; Deaths 58. The deaths are above the average. Small-pox has prevailed to a considerable extent, but is now subsiding. The number of persons registered as having died from that cause is 18. Great numbers have been vaccinated and re-vaccinated.

318; 4. CHARD; *Crewkerne*.—Births 70; Deaths 65. 24 deaths have been from small-pox. This disease has been thus fatal from the obstinacy of many parents in the town of Crewkerne not allowing their children to be vaccinated.

319; 4. YEOVIL; *Yeovil*.—Births 87; Deaths 60. Small-pox has been prevalent in the outskirts of the town, a row of houses called Goar Knap, a very poor and dirty neighbourhood, and there I have registered 6 deaths during the quarter, in none of which cases had vaccination been previously performed.

321; 2. FROME; *Frome*.—Births 74; Deaths 59. Small-pox has been very prevalent in the sub-district during the quarter; 7 deaths are from this disease, and many cases are still under treatment.

323; 2. WELLS; *Glastonbury*.—Births 107; Deaths 61. Small-pox and measles have been very prevalent, and have caused an increase in the deaths. Small-pox continues to increase; measles is almost abated.

326; 2. BATH; *Bathwick*.—Births 24; Deaths 45. Small-pox has been prevalent in my district, and a few cases have been fatal.

326; 3. BATH; *Abbey*.—Births 62; Deaths 94. The mortality was high. Small-pox was fatal in 14 cases, 10 of which were without previous vaccination.

326; 4. BATH; *Lyncombe*.—Births 59; Deaths 85. Small-pox has been very prevalent in this sub-district during the past quarter; several hundred cases have occurred, the results of which prove the necessity of enforcing vaccination. 10 deaths occurred from small-pox, but none to persons who had been vaccinated effectually.

326; 5. BATH; *Walcot*.—Births 68; Deaths 66. 13 deaths are from small-pox, only one of which is registered as having occurred after vaccination.

326; 6. BATH; *Lansdown*.—Births 78; Deaths 86. The deaths are 30 above the average, owing chiefly to the prevalence of small-pox and measles. 9 persons died from the former, 7 of whom had never been vaccinated, owing to the prejudice and neglect of their parents. The disease prevailed to a great extent, but was mostly of a modified character.

326; 7. BATH; *Batheaston*.—Births 39; Deaths 28. Small-pox, which has been epidemic in this sub-district during the last 12 months, has for the present at least disappeared, as at the time I write I do not think there is a single case under treatment in the district.

VI. WEST MIDLAND COUNTIES.

22. GLOUCESTERSHIRE.

329; 1. BRISTOL; *St. Mary Redcliff*.—Births 126. Deaths 112. The deaths are considerably above the average, owing to the prevalence of small-pox in April and May. The deaths from it were 26.

24. SHROPSHIRE.

353; 4. CLUN; *Lydbury*.—Births 25; Deaths 14. The deaths have been double the average. Disease of the throat was fatal in 5 cases.

360; 1. SHREWSBURY; *St. Mary*.—Births 130; Deaths 105. Small-pox still continues prevalent. The mortality is small compared with the number attacked. Little attention is paid to vaccination amongst the poor.

360; 2. SHREWSBURY; *St. Chad*.—Births 75. Deaths 65. The district is free from epidemics, with the exception of small-pox, of which a considerable number of cases have occurred.

25. STAFFORDSHIRE.

378; 2. PENKRIDGE; *Brewood*.—Births 38; Deaths 46. Measles and affections of the throat continue very prevalent. Diphtheria proved fatal in 2 cases.

379; 7. WOLVERHAMPTON; *Bilston*.—Births 320; Deaths 144. The deaths are below the average considerably, though the poor are still suffering from the want of employment. Many iron-works are closed.

26. WORCESTERSHIRE.

386; 4. MARTLEY; *Leigh*.—Births 27; Deaths 33. Malignant sore throat has been, and is, epidemic in this district; there have been 4 deaths from it in the quarter. Small-pox has also been epidemic, but only one death has been caused by it.

27. WARWICKSHIRE.

400; 2. COVENTRY; *Holy Trinity*.—Births 179; Deaths 110. Hooping-cough has continued prevalent, and, with convulsions, has terminated fatally in 18 cases. Small-pox has also prevailed in some parts of my district, and 5 deaths have resulted from that cause. A large number of certificates of successful

vaccination have been sent in from the medical officers during the quarter, thus indicating increased attention to the means of averting the disease.

VII. NORTH-MIDLAND COUNTIES.

28. LEICESTERSHIRE.

411; 1. BLABY; *Wigston*.—Births 59; Deaths 38. Small-pox has been very prevalent here for some time; it is now on the decline, and few deaths have occurred from it.

30. LINCOLNSHIRE.

423; 1. SPALDING; *Pinchbeck*.—Births 35; Deaths 23. The average number of deaths is 15. Diphtheria has prevailed as an epidemic.

430; 4. SPILSBY; *Burgh-le-Marsh*.—Births 52; Deaths 36. Scarlatina has been very prevalent and fatal at Bratoft in this sub-district during the quarter. 6 deaths occurred in one family in the space of a week, those of a father and his 5 children; and another child died in less than a month.

434; 3. GAINSBOROUGH; *Misterton*.—Births 23; Deaths 15. The deaths are rather above the averages of the same quarter for several preceding years. Since the late Act of Parliament was passed, taking from the Board of Guardians the power to carry out sanitary arrangements, little or no attention has been paid thereto. There have been several cases of fever in the district, but, though very expensive to the Poor Law Union, they have not ended fatally. The fever was caught in another district by a nurse.

31. NOTTINGHAMSHIRE.

438; 2. BASFORD; *Ilkeston*.—Births 153; Deaths 82. The number of deaths exceeds the average. In the early part of the quarter bronchitis was very prevalent, and proved fatal in many cases, especially in young subjects. Scarlatina has also raged as an epidemic, and has carried off many victims, in some instances after illness of a few hours only.

438; 5. BASFORD; *Arnold*.—Births 70; Deaths 30. The above numbers are considerably below the average of the corresponding quarters for 10 years past, the averages of such quarters having been births 83, deaths 45. This great disparity I attribute to the wretched state of trade amongst framework knitters and their dependents, which has caused great numbers to leave this part in search of other employment. The district is and has been for some time past remarkably healthy.

440; 4. NOTTINGHAM; *Byron*.—Births 145; Deaths 112. Hooping cough and scarlatina have prevailed to some extent during the quarter. I have registered 11 deaths from the former, and 13 from the latter disease.

32. DERBYSHIRE.

445; 1. DERBY; *St. Alkmund*.—Births 148; Deaths 147. The deaths are considerably above the average, owing to the prevalence of the following diseases: small-pox, which was fatal in 16 cases; scarlatina in 13; and hooping cough in 8.

445; 2. DERBY; *St. Peter*.—Births 313; Deaths 175. The deaths are below the average. There are 15 fatal cases of scarlatina; 5 of small-pox without vaccination, four after vaccination.

449; 2. BAKEWELL; *Matlock*.—Births 97; Deaths 69. Small-pox has been prevalent in this sub-district during the quarter.

VIII. NORTH-WESTERN COUNTIES.

33. CHESHIRE.

452; 2. STOCKPORT; *Hyde*.—Births 160; Deaths 109. Scarlatina is very prevalent in my sub-district; 19 deaths in the quarter have been from that disease alone.

455; 3. RUNCORN; *Runcorn*.—Births 130; Deaths 71. Small-pox has been fatal in 10 cases. More children have been vaccinated in Runcorn this quarter than for some time previously, which no doubt is owing to the prevalence of small-pox.

457; 2. CONGLETON; *Congleton*.—Births 153; Deaths 122. The deaths are above the average, owing to the prevalence of scarlatina and diseases of the chest and throat.

34. LANCASHIRE.

461; 5. LIVERPOOL; *St. Thomas*.—Births 282; Deaths 241. Measles has caused 30 deaths, typhus 9, scarlatina 7, and small-pox 5 (all the last cases unvaccinated). A woman died at the age of 100 years and another at 103 years.

462; 6. WEST DERBY; *West Derby*.—Births 432; Deaths 288. The deaths are 15 less than in the previous quarter, but exceed by 93 the average for corresponding quarters of the last four years. A great number have arisen from bronchitis, scarlatina, and measles, especially in April and May.

464; 5. ORMSKIRK; *North Meols*.—Births 101; Deaths 80. The deaths exceed the average of five corresponding quarters by 28. Small-pox was fatal in 12 cases, scarlatina in 6. These diseases have been very prevalent in some parts of my district, but I believe that now there is not a single case.

464; 7. ORMSKIRK; *Scarisbrick*.—Births 42; Deaths 35. Scarlatina has been very prevalent during the quarter, and was fatal in 11 cases.

471; 3. CHORLTON; *Chorlton upon Medlock*.—Births 328; Deaths 212. The deaths are above the average, and in excess of any corresponding quarter for the last four years. Hooping cough is unusually prevalent, and of the 24 cases registered 15 occurred in June. There have been 14 deaths from scarlatina, 6 from measles, and 2 from small-pox in children, neither of whom had been protected by vaccination.

471; 4. CHORLTON; *Hulme*.—Births 682; Deaths 500. The deaths in this district are again considerably above the average. Scarlatina and pertussis have been particularly fatal. I have registered 61 deaths from scarlatina alone, and 42 from pertussis. There have been 3 fatal cases of small-pox, one of which had no medical attendance.

472; 1. SALFORD; *Pendleton*.—Births 207; Deaths 153. 24 deaths were from scarlatina, and 10 from measles.

472; 4. SALFORD; *Regent Road*.—Births 325; Deaths 270. The deaths are much above the average for five corresponding quarters, which is 221. Scarlatina is the predominant disease, and caused 56 deaths. It has now nearly subsided.

473; 2. MANCHESTER; *Deansgate*.—Births 244; Deaths 225. The certified causes of death are 166. From scarlatina 13 children died, from small-pox 5, fever 7, measles 4, hooping cough 9, and diarrhoea 3. There has as yet been no premonition of cholera here. The deaths from diarrhoea are fewer than usual at this time of the year.

473; 7. MANCHESTER; *Cheetham*.—Births 168; Deaths 71. The deaths about the average. Scarlatina was prevalent in the early part of the quarter. There have been several cases of small-pox in adults, but none fatal.

474; 2. ASHTON-UNDER-LYNE; *Ashton Town*.—Births 306; Deaths 258. The deaths exceed the average by 32, which I think may be attributed to scarlatina, 35 having been registered from that cause.

474; 3. ASHTON-UNDER-LYNE; *Audenshaw*.—Births 101; Deaths 94. Scarlatina and small-pox prevalent.

474; 6. ASHTON-UNDER-LYNE; *Dukinfield*.—Births 293; Deaths 208. The deaths are 12 above the average of 5 years. Scarlatina and small-pox are still prevalent in my district. Many persons previously vaccinated have taken small-pox, but in a much milder form than those who had not been previously vaccinated. Most children who have died from scarlatina suffered from a diphtheritic state of the throat and dropsy. Vaccination is very well attended to in my district, which I ascertain from the number of duplicate certificates received.

475; 1. OLDHAM; *Oldham-below-Town*.—Births 388; Deaths 268. The deaths are 20 more than in the corresponding quarter of 1857. The district is very healthy, although small-pox has been very prevalent. 3 deaths have been registered from that disease.

479; 4. CLITHEROE; *Clitheroe*.—Births 74; Deaths 65. The deaths are 5 above the average for five corresponding quarters. Scarlatina has been prevalent, and 21 deaths from that cause, and 2 from typhus have been registered.

480; 4. BLACKBURN; *Blackburn*.—Births 598; Deaths 462. The deaths are above the average of the four preceding June quarters, owing to scarlatina.

481; 4. CHORLEY; *Chorley*.—Births 192; Deaths 132. The deaths exceed the average, owing to the prevalence of measles and scarlatina, 21 deaths having occurred from the former, and 17 from the latter cause.

486; 3. ULVERSTONE; *Ulverstone*.—Births 91; Deaths 47. The births and deaths are about the average. Small-pox is very prevalent in all parts of my district; it appears, however, to be of a mild form, in consequence probably of vaccination. Only 5 cases out of about 20 to 30 proved fatal; 4 of the fatal cases having occurred to children not vaccinated, and one not successfully vaccinated. There has been no committee for the removal of nuisances during the last two years, and the breaking out of this loathsome disease is therefore not to be wondered at. I only receive about 30 certificates of vaccination to 80 births.

IX. YORKSHIRE.

35. WEST RIDING.

497; 2. HUDDERSFIELD; *Meltham*.—Births 60; Deaths 50. The deaths are about 15 per cent. above the average of five corresponding quarters. Scarlatina still prevails, though somewhat mitigated in its character.

498; 4. HALIFAX; *Halifax*.—Births 345; Deaths 278. The deaths are 43 above the average. Scarlatina still prevails to a considerable extent. Hooping-cough has been fatal in many cases.

499; 7. BRADFORD; *Horton*.—Births 385; Deaths 249. The births and deaths are about the average. Scarlatina is prevalent, and seems to be on the increase.

499; 8. BRADFORD; *Thornton*.—Births 104; Deaths 91. The deaths are considerably above the average of corresponding quarters. Measles and bronchitis have prevailed throughout the quarter, to which the excess of deaths is mainly attributable.

499; 13. BRADFORD; *Pudsey*.—Births 129; Deaths 80. Though the deaths do not exceed the average, scarlatina has been unusually prevalent, and it was fatal in 9 cases.

506; 1. WORTLEY; *Cawthorne*.—Births 50; Deaths 37. Malignant sore throat or diphtheria was the most prevalent complaint, and fatal in 10 cases.

506; 2. WORTLEY; *High Hoyland*.—Births 45; Deaths 19. Small-pox became prevalent in a township in this district in March, and two deaths from it have been registered. The disease is now on the decline,—no new case having presented itself for 10 days. On inquiry I find a strong impression that those who had been previously vaccinated did not suffer so much as those who had not, and there is now a strong feeling in favour of vaccination.

508; 3. SHEFFIELD; *South*.—Births 162; Deaths 103. The mortality from small-pox continues high. The deaths from it were 12; they occurred mostly in the early part of the quarter.

508; 5. SHEFFIELD; *Brightside*.—Births 235; Deaths 141. The births are 30, and the deaths 36, above the averages of five previous corresponding quarters. The increase of population will in some measure account for the difference. As compared with those of last quarter, the deaths are less by 69, there being fewer by 34 from small-pox alone.

Hooping-cough . . .	6		

509; 2. ROTHERHAM; *Rotherham*.—Births 84; Deaths 74. The deaths above the average, arising from small-pox, principally amongst children and those not vaccinated.

514; 3. TADCASTER; *Bramham*.—Births 51; Deaths 53. The deaths are above the average, which I attribute to the prevalence of scarlatina in three villages in my district; viz. Bramham, Clifford, and Boston Spa. The greatest number of deaths took place where the sanitary arrangements are in the worst state. Boards of Health have just been formed, and they are now making considerable improvements.

37. NORTH RIDING.

525; 2. SCARBOROUGH; *Scarborough*.—Births 171; Deaths 97. Compared with the numbers in corresponding quarters of five previous years, there is an increase of 19 births and an increase of 10 deaths, in both cases caused by the rapid yearly increase of the population of Scarborough. As in the last quarter, the deaths were numerous amongst children. The mortality very much decreased towards the end of the quarter. There have died 4 persons from cynanche maligna, 3 from diphtheria, and 4 from scarlatina.

532; 3. GUISBROUGH; *Kirkleatham*.—Births 88; Deaths 56. The number of deaths for this quarter is considerably above the average. This is entirely accounted for by the extreme prevalence of hooping-cough and measles over the whole district,—15 deaths having taken place from these diseases.

X. NORTHERN COUNTIES.

38. DURHAM.

545; 4. DURHAM; *St. Nicholas*.—Births 273; Deaths 128. The births are a little above and the deaths about the average. Small-pox and fever have been prevalent, but not many fatal cases have occurred from the former.

548; 1. CHESTER-LE-STREET; *Chester-le-Street*.—Births 147; Deaths 83. The deaths are much above the average, owing, I think, to the weather, which has been unusually hot and oppressive.

39. NORTHUMBERLAND.

555; 3. HEXHAM; *Allendale*.—Births 85; Deaths 42. The deaths are about the average. Bronchitis is still prevalent, owing, I presume, to a great number of the inhabitants being employed in mining.

40. CUMBERLAND.

569; 1. WIGTON; *Wigton*.—Births 85; Deaths 57. The deaths are 6 above the average of 5 corresponding quarters. We have had small-pox throughout the quarter in the township of Wigton, but only 2 deaths from that cause have been registered.

XI. MONMOUTHSHIRE & WALES.

43. SOUTH WALES.

582; 4. MERTHYR TYDFIL; *Aberdare*.—Births 453; Deaths 301. Small-pox has not altogether disappeared from my district. I have registered 62 fatal cases this quarter, but most of them in the early part of it.

585; 2. SWANSEA; *Llangafelach*.—Births 127; Deaths 76. 6 deaths from small-pox.

585; 3. SWANSEA; *Swansea*.—Births 288; Deaths 173. Small-pox is still very prevalent; 34 deaths from it have been registered in this sub-district during the quarter; 7 from scarlatina.

589; 1. CARMARTHEN; *Llangendeirne*.—Births 90; Deaths 81. The deaths have been very numerous; a great number of children died from hooping-cough, scarlatina, and small-pox.

592; 1. HAVERFORDWEST; *Milford*. — Births 65; Deaths 53. There have been many cases of fever and small-pox, though few fatal. Vaccination is now well attended to.

592; 2. HAVERFORDWEST; *Haverfordwest*. — Births 93; Deaths 105. The deaths are above the average, owing to the prevalence of small-pox.

601; 2. CRICKHOWELL; *Llangunider*. — Births 38; Deaths 27. Small-pox continues to prevail in the Hill division of my district, but is apparently of a milder type than it was for some months previous,

although the fatal cases are nearly the same as in last quarter.

44. NORTH WALES.

608; 2. MONTGOMERY; *Chirbury*. — Births 50; Deaths 37. Small pox has been prevalent during the last 2 quarters, but it is now on the decline. More attention is given to vaccination. There has been only one death, which was that of a lady who had been vaccinated unsuccessfully 27 years ago.

[The following Index furnishes a reference to the *Number* of each DISTRICT in the Tables of Marriages, Births, and Deaths contained in this Return. Any District in the Registrars' Notes may be found in the same manner. In forming the alphabetical arrangement, the principle adopted has been to place compound names in the order in which they are pronounced.]

QUARTERLY RETURN

OF

THE MARRIAGES, BIRTHS, AND DEATHS

REGISTERED IN THE DIVISIONS, COUNTIES, AND DISTRICTS OF

ENGLAND.

By Authority of the Registrar General.

PUBLISHED BY EYRE AND SPOTTISWOODE, 9, EAST HARDING ST., FETTER LANE, E.C.

No. 39.]

Marriages, April, May, June, 1858.

Births and Deaths, July, August, September, 1858.

[Price 4d.

*General Register Office, Somerset House,
28th October 1858.*

THIS Return comprises the BIRTHS and DEATHS registered by 2197 Registrars in all the districts of England during the summer quarter that ended on September 30th, 1858; and the MARRIAGES in 12,303 churches or chapels, about 3997 registered places of worship unconnected with the Established Church, and 629 Superintendent Registrars' offices, in the quarter that ended on June 30th, 1858.

The depression of the country diminished in the spring quarter of the year. The marriages nevertheless remained below the average number.

The birth-rate was slightly below the average in the summer quarter. The mortality was less than the average of the summer season, and this is to some extent the result of sanitary improvements.

MARRIAGES.

39,909 marriages were celebrated in the quarter ending June 30th; consequently 79,818 persons married in the three months. This is nearly 20,000 in excess of

MARRIAGES, BIRTHS, and DEATHS, returned in the Years 1846-58 and in the Quarters of those Years.

the numbers married in the previous quarter, but is somewhat less than the numbers in the corresponding quarter of last year. The people married at the annual rate of 164, the average rate of the season being 171 in 10,000. The rate of marriage is lowest in winter; and in the last winter it was 125, or 16 below the average of that season; so that the improvement of the prospects of the people in spring is evident. The agricultural counties of the south of England, the northern counties and London, were but slightly affected; Staffordshire and Lancashire experienced the greatest degree of depression, but that was not very considerable.

BIRTHS.

157,449 children were registered in the quarter that ended on September 30th, or 3766 less than the births in the corresponding quarter of the previous year. The birth-rate was 3·195, or slightly below the average rate of the season, 3·247.

INCREASE OF POPULATION.

157,449 births and 98,260 deaths were registered, consequently the natural increase of the population in the 92 days was 59,189, or 643 daily in England. The probable natural increase of population in the United Kingdom was 964 daily.

10,803, or, allowing for persons of undistinguished nationality, 12,844 English emigrants sailed from ports at which there are Government emigration agents in the last three months; 6859 to the Australian colonies, 692 to the North American colonies, 4877 to the United States, and 416 to all other places.*

The emigrants from the United Kingdom amounted to 29,354; or to fewer, by fifteen thousand, than have emigrated in any corresponding quarter since 1847.

THE WEATHER AND THE PRICE OF PROVISIONS.

The prices of wheat fell progressively from 72s. 3d. a quarter, in the months of July, August, September 1856, to 59s. 11d. in 1857, and to 44s. 7d. on an average in the corresponding three months of the present year; the decrease of price was thus

† The Table may be read thus, without reference to the decimal points:—In the year 1848 to 100,000 of the population of England there were 1594 persons married, 3247 births, 2306 deaths registered.—The annual rates of marriage in each of the four quarters were 1·322, 1·610, 1·510 and 1·922 per cent.; the rates of death 2·794, 2·313, 2·005, and 2·108 per cent. In reading the population on the first line add 3 ciphers (000). The 3 months January, February, March, contain 90, in leap year 91 days; the 3 months April, May, June, 91 days; each of the last 2 quarters of the year 92 days. For this inequality a correction has been made in the calculation.

* From a Return with which the Registrar General has been favoured by the Emigration Commissioners: the number returned as of English origin was 10,803, while the birthplace of 4664 was not distinguished; in the above statement a proportional number of these have been added to those returned as of English origin.

38 per cent. The price of beef by the carcase at Leadenhall and Newgate markets fell in the two years from $5\frac{1}{2}d.$ to $5\frac{1}{4}d.$ a pound; mutton from $6d.$ to $5\frac{1}{2}d.$ a pound, or 8 per cent. in price. Potatoes (York Regents) were sold at 78s. a ton at the waterside market, Southwark; or 26 per cent. less than the prices of the same season in the previous year. In this year 30 lbs. were sold for a shilling; in the last year 21 lbs. only. The price of potatoes is now the same as the price was in 1856.

The weather during the three months presented some peculiarities; at Greenwich the temperature of the air in July was below, in August slightly above ($1\cdot5^{\circ}$), in September $4\cdot0^{\circ}$ above the average of 87 years. The humidity was below, the barometric pressure above the average. The rain-fall was 5·4 in. in the three months, or nearly two inches below the average. The rain-fall was not so scanty in the north; in latitude 52° – 53° it was 7·1 in., in latitude 53° – 54° it was 8·4 in. In the Isle of Wight, Devon, and Cornwall from 7 to 8 in. of rain fell.

STATE OF THE PUBLIC HEALTH.

98,260 deaths were registered in 92 days; and the mortality was at the rate of 1·994 per cent. annually, or ·146 below the average. The average rate of the season exceeded 21; the actual rate of the last quarter was less than 20 in 1000.

During the last summer the annual rate of mortality in the population of the country, of villages and of small towns, was at the rate of 17 in 1000; the average rate being 18. And in the same time the town population died off at the annual rate of 24 in 1000; the average rate being 26.

The AVERAGE PRICES of Consols, of Wheat, Meat, and Potatoes, also the AVERAGE QUANTITY of Wheat sold and imported weekly, in each of the Nine Quarters ending September 30th, 1858.

Note.—The total number of quarters of wheat sold in England and Wales for the 13 weeks ending September 30th, 1856, 1,016,704; for the 13 weeks ending December 31st, 1856, 1,467,816; for the 13 weeks ending March 31st, 1857, 1,331,623; for the 13 weeks ending June 30th, 1857, 1,402,051; for the 13 weeks ending September 30th, 1857, 1,198,029; for the 13 weeks ending December 31st, 1857, 1,313,321; for the 13 weeks ending March 31st, 1858, 1,294,855; for the 13 weeks ending June 30th, 1858, 1,208,420; and for the 13 weeks ending September 30th, 1858, 1,264,996. The total number of quarters entered for Home Consumption was respectively 1,531,489; 1,446,588 (14 weeks); 667,027; 548,315; 719,992; 1,242,628; 840,475; 1,125,165; and 1,070,845.

The deaths in the ninety-two days amounted to 98,260. If the mortality had been at the standard rate deduced from sixty-three of the least unhealthy districts, the deaths would have amounted to 73,088 ; consequently the deaths in excess of the comparatively healthy average, or the unnatural deaths, amounted to 25,172 ; of which 20,146 happened in the large towns, and 5026 in the small towns and villages.

Diphtheria, which is often called “throat disease,” has prevailed in some districts of the south, and has now extended northwards ; it has been fatal in the Horncastle district, Lincolnshire ; prevalent in Newark ; and several children have died of the disease in Sheffield. Districts of the East Riding and of the North Riding of Yorkshire have been visited by the epidemic diphtheria.

Typhoid fever, which a young physician, Dr. Murchison, proposes to call pythogenic* fever, to point at its origin from putrid animal effluvia, has been prevalent in some districts. Several deaths occurred from it in Daventry. All the cases were confined to a small space which was badly drained. The Regius Professor of Medicine in the University of Oxford has recently written an interesting report on this fever occurring in the parish of Great Horwood. The township contained a population of 704 in 1851 ; and 125 had been attacked, 18 killed by the fever up to July 9th, the date of his report. He shows how the village, on the ridge of a hill, in a parish pleasantly wooded, with fine pastures and fruitful corn fields, occupied by a population wholly agricultural, was attacked by the fever ; how the first case, appearing about Michaelmas in last year, occurred in one of the best houses in the place. The patient had been at Buckingham, and there was much fever at the time. He then tells how the brothers and sisters of the servant, and the servant herself, finally fell ill in their home ; how all the people of a room over filthy water, in the worst house in the parish, were attacked, and three of the family died ; and then how the inmates of a new row of houses and of old cottages were visited by the village plague. He sums up by ascribing the continuance of the disease during the last nine months in various degrees to contagion, overcrowded dwellings, putrescent matter, and an insufficient supply of fresh air, or, as it is called, bad ventilation. The evil is most grievous in the sleeping rooms. “We can do no more,” said one woman, “than keep clean that which we have. We cannot get our landlord to give us more air, or “make the windows we have to open. ‘Women’ he said, ‘are best shut up.’”

* πύθομαι, putresco.

"I often awake stifled" said another woman, "and me and my husband go and sit at the window." The poor people, however, can remedy the other great evil from which they suffer; "accumulations of muck, filth, and piggeries close to human dwellings." Here is the type of fever and its causes in agricultural districts. Dr. Acland shows how the ravages of disease may be diminished. He sketches a model cottage, and refers for further information to the admirable volume by Roberts on the dwellings of the labouring classes. He tells how dwellings should be managed, and how nuisances should be abolished.*

The greater part of the evils from which the country people are now suffering is the result of ignorance, which can only be dispersed by the diffusion of sanitary knowledge through its natural channels, the medical practitioners, the public writers, the lawyers, the clergy, and the gentry of the country. Dr. Acland, at one of the fountain heads of education, has great opportunities, which he has already turned to account in this direction, with the happiest effects.

Following the waters of the hills of Buckinghamshire down through the fens, we arrive at Ely. Here a remarkable example is found of the salutary effects of simple sanitary measures, of which every town in the kingdom may have the advantage. Ely stands, with its lofty cathedral, on one of the old fen islands. It is a small city of 6176 inhabitants (in 1851), and is in the neighbourhood of the low lands, where the great systems of modern embankments and draining were commenced by Vermuyden, one of Cromwell's colonels of horse. The Bishop of Ely in ancient times went in his boat to Cambridge. And the country around, like all our old marshes, is still imperfectly drained. The atmosphere has therefore no natural advantages. The Public Health Act was introduced in 1851. The Ely Board of Health was founded. They set on foot two great works; one for supplying the town with water, the other for carrying off that water through every house clear out of the town. The public works were completed at the end of 1854; and the houses were gradually connected with the public sewers, leaving, however, at the end of 1857, 200 in 1200 houses out of connection. Mr. Marshall, the superintendent registrar of the district, in an able paper shows the results of this great experiment. In the *seven* years (1843-49) before the Public Health Act was in operation the mortality was at the rate of 26 deaths annually to every 1000 living; in the seven subsequent years (1851-57), when the sanitary measures were only partially carried out, the mortality fell down to the rate of 19 deaths annually to every 1000 living. The mortality in the two last years (1856-57) was at the rate of 17 in 1000. In the same periods the surrounding rural parishes underwent some improvement; but the improvement of the city has advanced so much more rapidly that its mortality was in the last two years 4 in 1000 less than the mortality of the surrounding country. The young people under the age of 35 have enjoyed remarkable immunities from disease, and the benefit will be transmitted to succeeding generations. The two chief sanitary works which have been completed are the introduction of water taken from the river of inferior quality, and the destruction of *four thousand* cubic yards of cesspools,—nearly four yards to each house. The surveyor, Mr. Burns, exclaims, with justifiable pride, "There is still a number of cesspools remaining, and the sooner they are done away with the better. After this is done, I may truly say that I found Ely a city of cesspools, filth, and sickness; but I shall leave it a city of drains, health, and cleanliness, and that is something to be proud of." Yes, Mr. Burns, you may well be proud of your work. Pau in the Pyrenees, to which British invalids still resort for health, experienced a mortality of 28 and 23, when you had reduced the mortality of Ely to 17 in 1000.†

The citizens of Ely have sunk 15,000*l.* on their sanitary works, which appear to have been conducted in something like the same determined spirit as animated Cromwell's colonel of horse. Certain ratepayers who enjoy the benefits complain of the burthen of the rates.

* Fever in Agricultural Districts. By H. W. Acland, M.D., F.R.S., Regius Professor of Medicine in the University of Oxford. This pamphlet should be widely circulated through all the agricultural districts.

† See Paper by Dr. Ottley in Medical Gazette, 23d October 1858.

We may now turn from this small resolute city in an agricultural district to Liverpool, the second city of the kingdom, where the great work of sanitary improvement is also advancing.

Liverpool lies on the shore of the fresh, deep, wide Mersey, which is lined by her magnificent docks; and the houses rise from the river over the red sandstone heights in long stretching lines. Lancashire and Cheshire cover the plains and hills behind the queenly town; before her are Ireland, America, and the Ocean which her ships ride over, carrying foreign produce or the manufactures of the north, to and from the various regions of the world. The place is well chosen for health; and in Gough's Camden (ed. 1806) Liverpool is said to be celebrated for "her beauty and populousness." Yet it was found and published in the first Registration Report*, that the mortality of the population of this district was in the latter half of 1837 at the rate of 39 in 1000 annually; while the population of West Derby, containing, with other parishes, the outlying parts of the borough, died at the rate of 25 in 1000. The strong contrast between the contiguous places, and the subsequent discovery that Liverpool was one of the unhealthiest parishes in the kingdom, excited surprise as well as regret in the public mind. A local association was formed of some of the best people; and the causes of the mortality were investigated and were afterwards made known by Dr. Sutherland in a series of lucid papers. Little, however, was done; the prophets had been crying in the desert; and in 1846 the mortality grew still more threatening. Cholera raged fearfully in the borough in 1849. Steps were now taken to carry out sanitary measures, under the direction of Dr. Duncan and the other able officers of the town. The sanitary school of Liverpool subsequently furnished some of the most efficient members of the commission which did good service in the East. Still it is to be regretted that, according to the annexed table (*see* page 30), the health of the great bulk of the population of Liverpool has improved but slowly. Liverpool has a good supply of water; but it is still infested by cesspools, including under this name the filthy Lancashire midden; and the drains pour their contents into the dock basins, which exhale a malarious sickly air over the people. The mortality in the borough of Liverpool was at the rate of 29 in 1000 in the year 1857. Much good, therefore, has been done since 1837; thousands of lives have been saved. Still Liverpool has not yet, like Ely, taken the bull by the horns. Or why should not the mortality be as low as 19 or even 17 in 1000? What natural advantages has Ely, taking one thing with another, over Liverpool? If Ely has had thousands of cubic yards of dirt removed, Liverpool has hundreds of thousands of cubic yards to deal with; but her means are commensurate with her duty. Mr. Newlands can do for Liverpool what Mr. Burns has done for Ely. The cesspool, the midden, or call it what they may, for it is still the same, is the chief destroyer of the Lancashire population. Crowded dwellings, vice, want, do a part of the mischief; but in Liverpool the cesspool destroyed a large proportion of the 6418 people who last year perished in excess of the numbers who would have died at the rates prevailing in country districts. The tender-hearted may shed natural tears over them as they lie in the cemetery. Abolish the cesspools of Liverpool and you immediately save the lives of thousands of people. Yet the parties who have exerted themselves to put a stop to capital punishments have not been roused by the ruthless destruction of men; and no Beccaria has written on these crimes and punishments. A living poet in one of his last poems, exclaims:—

" Ah, it is the gallows tree !

" Breath of Christian Charity,

" Blow ! and sweep it from the earth."

But what number of lives did the "gallows tree" take away in 1857? Thirteen in all England and Wales; two only in Lancashire. And these were the lives of murderers, who were put to death for their crimes after the most deliberate judicial inquiry. But the six thousand four hundred and eighteen men, women, and children of Liverpool were destroyed cruelly in that year without discrimination. Of the cesspool, rather than of the gallows tree, a wiser muse will sing,—*Sweep it from the earth*

* Registrar General's First Report, Appendix, p. 118. 1839.

* The Registration Counties consist of groups of entire Registration Districts; which Districts are, in general, identical with the Poor Law Unions. As the principle adopted has been to place a District or Union which extends into more than one County with the County in which either the principal town or the greater part of the population is located, the limits of the Registration Counties differ more or less from the boundaries of the Counties proper.

MARRIAGES Registered in the Quarters ending 30th June 1856—1858; BIRTHS and DEATHS Registered in the Quarters ending 30th September 1856—1858; in the DIVISIONS, REGISTRATION COUNTIES, and DISTRICTS of ENGLAND—*continued*.

* The Districts are collections of contiguous Parishes or Places, generally identical with the Poor Law Unions of the same names ; they are 630 in number, and are here arranged topographically under the Registration Counties.
† A slight change was made in these Districts in March 1858.
‡ The Hamlet of Mile End Old Town, which formed part of the Stepney District prior to 1st October 1857, is now a distinct and separate District. For the sake of comparison the births and deaths in Mile End Old Town prior to 30th September 1857 are stated for the present limits ; for the marriages, the numbers of which have not been separately ascertained, a joint return is made.

II.—SOUTH EASTERN COUNTIES—continued.

* The Gower Union and District was formed on 19th July 1858 by the severance of parishes from the district of Swansea.

† A change was made in these districts in November 1857.

‡ The number of districts is increased to 630 by the formation of the following new districts: Mile End Old Town (24 b), Dulverton (313 b), Whitechurch, Salop (363 b), Great Ouseburn (492 a), Wetherby (492 c), Hemsworth (504 b), and Gower (585 b).

Remarks on the weather, during the Quarter ending September 30th, 1858. By JAMES GLAISHER, ESQ., F.R.S., &c., Sec. of the British Meteorological Society.

Till July the 10th the air was cold, being $5^{\circ} \cdot 7$ below the average temperature; it then became warm until the 25th, the mean excess above the average being $2^{\circ} \cdot 5$; from the 25th to the end of the month the air was cold again, the average deficiency being $2^{\circ} \cdot 5$. The mean high day temperature was $73^{\circ} \cdot 8$, exceeding the average by $0^{\circ} \cdot 2$; and the mean low night temperature was $51^{\circ} \cdot 8$, being $1^{\circ} \cdot 4$ below the average. The mean temperature of the month was about 1° below the average.

August was warm till the 24th, being 2° above the average temperature, then till the end of the month the air was cold, the average deficiency being $2\frac{1}{2}^{\circ}$. The mean high day temperature was $75^{\circ} \cdot 6$, exceeding its average by $2^{\circ} \cdot 9$; and the mean low night temperature was $52^{\circ} \cdot 1$, being $1^{\circ} \cdot 4$ below the average. The mean temperature of the month was $1\frac{1}{2}$ above the average of the preceding 87 years.

September was warm throughout, being 4° in excess of the average of 87 years. The mean high day temperature was $70^{\circ} \cdot 9$, exceeding the average by $3^{\circ} \cdot 4$; and the mean low night temperature was $52^{\circ} \cdot 6$, exceeding the average by $3^{\circ} \cdot 7$. The mean temperature of this month has been but four times exceeded during the last 87 years; viz., in the years 1779, 1795, 1815, and 1818, when the mean temperature was respectively, $60^{\circ} \cdot 7$, $60^{\circ} \cdot 8$, $62^{\circ} \cdot 3$, and $60^{\circ} \cdot 7$.

The mean temperature of the dew-point was below its average in July and August, and above in September. The mean degree of humidity was in defect in each month of the quarter, and the air, therefore, was somewhat less humid than usual in these months.

The mean reading of the Barometer was in defect in July and in excess of the average in August and September; and was slightly in excess for the quarter.

The fall of rain was a little above the average in July; one inch below in August; and $1\frac{1}{4}$ inches below in September; and for the quarter there was a deficiency of about half an inch. The fall of rain at Lewisham, since January 1, is $14\frac{3}{4}$ inches, and in the corresponding period of last year was somewhat less than $14\frac{1}{4}$ inches.

The mean temperature of the air at Greenwich for the quarter ending September, constituting the three summer months, was $62^{\circ} \cdot 5$, being $2^{\circ} \cdot 5$ above the average of 87 years.

NOTE.—In reading this table it will be borne in mind that the sign (—) minus signifies below the average, and that the sign (+) plus signifies above the average.

Thunderstorms occurred or thunder was heard and lightning seen on the 6th of July at St. John's Wood and North Shields; on the 7th at Little Bridy, Lewisham, Camden Town, Berkhamstead, Hartwell Rectory, Royston, Grantham, and Belvoir; on the 8th at Lewisham, Paddington, Royston, Cardington, Hereford, Bedford, Norwich, Nottingham, and Stonyhurst; on the 14th at Little Bridy; on the 15th at Osborne, Fairlight, Little Bridy, Aldershot, Lewisham, Greenwich, Camden Town, Paddington, Rose Hill, Berkhamstead, Hartwell Rectory, Cardington, Bedford, Grantham, Belvoir, and Scarborough; on the 16th at Little Bridy, Lewisham, Greenwich, St. John's Wood, Camden Town, Berkhamstead, Hartwell House, Hartwell Rectory, Royston, Hereford, Norwich, Grantham, and Scarborough; on the 17th at Truro, St. John's Wood, and Hartwell House; on the 18th at Hereford, Grantham, Nottingham, Manchester, Chorlton-upon-Medlock, Stonyhurst, Scarborough, and North Shields; on the 19th at Wakefield; on the 24th at Chorlton-upon-Medlock, Stonyhurst, Isle of Man, North Shields, Silloth, Bywell, and Allenheads; and on the 25th at Grantham and Allenheads. On the 3d and 5th of August at Stonyhurst; on the 10th at Osborne and Hereford; on the 11th at Exeter, Clifton, Rose Hill, Gloucester, Hereford, Lampeter, Hawarden, and Silloth; on the 12th at Camden Town, Berkhamstead, Hartwell Rectory, Royston, Cardington, Hereford, Bedford, Norwich, Belvoir, Nottingham, Liverpool, Manchester, Chorlton-upon-Medlock, Wakefield, and Leeds; on the 13th at Scarborough; on the 14th at Little Bridy, Aldershot, Lewisham, Green-

wich, Berkhamstead, and Scarborough; on the 18th at Fairlight, Camden Town, Norwich, Holkham, Wakefield, and Scarborough; on the 19th at Little Bridy; on the 24th at Hartwell Rectory; and on the 25th at Fairlight. On the 5th of September at Lewisham, Hartwell House, Cardington, Bedford, Grantham, Stonyhurst, and Silloth; on the 16th at Exeter and Little Bridy; on the 17th at Aldershot, Lewisham, Camden Town, Rose Hill, Berkhamstead, Gloucester, Hereford, Nottingham, Liverpool, Scarborough, and North Shields; on the 18th at Royston, Grantham, and Scarborough; on the 21st at Helston and Truro; and on the 22d at Osborne, Aldershot, Clifton, Hereford, Norwich, Hawarden, Chorlton-upon-Medlock, and Stonyhurst.

Thunder was heard but lightning was not seen on the 5th of July at Aldershot; on the 6th at Bywell; on the 7th at Aldershot, Clifton, Greenwich, Hartwell House, Royston, Cardington, and Holkham; on the 8th at Greenwich, Royston, Holkham, Manchester, and Silloth; on the 9th at Silloth; on the 12th at Hawarden; on the 15th at Helston, Berkhamstead, and Bywell; on the 16th at Fairlight, Clifton, Lewisham, Cardington, Belvoir, Nottingham, Stonyhurst, and Bywell; on the 17th at Hereford; on the 18th at Fairlight, Gloucester, Belvoir, and Nottingham; on the 20th at Hartwell Rectory; and on the 23d at Holkham. On the 3d of August at North Shields; on the 10th at Little Bridy and Hartwell Rectory; on the 11th at Fairlight, Hartwell Rectory, and Royston; on the 12th at Fairlight, Aldershot, Greenwich, Whitehall, Rose Hill, Grantham, Holkham, Hawarden, Chorlton-upon-Medlock, Stonyhurst, and Silloth; on the 13th at Scarborough and Silloth; on the 14th at Teignmouth, Fairlight, Hartwell House, Hartwell Rectory, and Norwich; on the 17th at Berkhamstead and Hartwell Rectory; on the 18th at Bedford; on the 25th at Fairlight; on the 27th at Stonyhurst; on the 30th at Fairlight; and on the 31st at Grantham, Belvoir, and Holkham. On the 5th of September at Fairlight, Greenwich, Camden Town, Belvoir, and Nottingham; on the 7th at Belvoir; and on the 22d at Fairlight, Little Bridy, Camden Town, Berkhamstead, and Cardington.

Hail fell on the 1st of July at North Shields; on the 7th at Grantham; on the 18th at Nottingham; and on the 20th at Rose Hill. On the 25th of August at Fairlight and Berkhamstead; and on the 31st at Bedford. On the 5th of September at Bedford, Stonyhurst, and Silloth.

Lightning was seen but thunder was not heard. On the 7th of July at Greenwich; on the 13th at Guernsey; on the 15th at Little Bridy, Clifton, Lewisham, Gloucester, Royston, and Nottingham; on the 17th at Helston and Truro; on the 18th at Helston and Little Bridy; and on the 24th at Monchester. On the 10th of August at Greenwich, Hartwell Rectory, and Cardington; on the 11th at Osborne, Little Bridy, Lewisham, Greenwich, Berkhamstead, Cardington, Bedford, Liverpool, Manchester, and Silloth; on the 12th at Lewisham, Greenwich, Grantham, Chorlton-upon-Medlock, Stonyhurst, and North Shields; on the 13th at Little Bridy, Aldershot, Lewisham, Berkhamstead, and Silloth; on the 14th at Exeter and Little Bridy; on the 18th at Lewisham, Greenwich, Royston, Cardington, Grantham, and Belvoir; on the 19th at Manchester and North Shields; on the 30th at Lewisham, Greenwich, and Cardington; and on the 31st at Cardington. On the 5th of September at Fairlight, Little Bridy, Aldershot, Clifton, Lewisham, Greenwich, Camden Town, Berkhamstead, Royston, Hereford, Belvoir, and Nottingham; on the 9th at Lewisham; on the 12th at Aldershot; on the 16th at Guernsey, Helston, Truro, Osborne, Clifton, Berkhamstead, Gloucester, Norwich, Nottingham, and Stonyhurst; on the 17th at Osborne, Fairlight, Little Bridy, Clifton, Greenwich, Battersea, Royston, Cardington, Hereford, Grantham, and Holkham; on the 18th at Belvoir and Nottingham; on the 19th at Fairlight; on the 22d at Gloucester and Cardington; and on the 23d at Royston.

Fog was prevalent on the 8th, 9th, 12th, 13th, 14th, 16th, 17th, 22d, 23d, 24th, 28th, 29th, 30th, and 31st of July at different parts of the country. On the 1st of August at Aldershot; on the 2d at Little Bridy; on the 4th at Helston and Little Bridy; on the 7th at Whitehall; on the 8th at Aldershot; on the 9th at Hartwell House and Wakefield; on the 10th at North Shields; on the 11th at Guernsey and Little Bridy; on the 12th at Guernsey, Little Bridy, and Berkhamstead; on the 13th at Lewisham, Wakefield, and North Shields; on the 14th at Little Bridy, Berkhamstead, and Stonyhurst; on the 17th and 18th at Little Bridy and Berkhamstead; on the 19th at Little Bridy; on the 22d at Scarborough; on the 23d at Whitehall, Hereford, and Scarborough; on the 24th at Clifton, Berkhamstead, Hartwell House, Royston, Cardington, Hereford, Lampeter, Wakefield, and Stonyhurst; on the 26th at Lewisham; and on the 29th at Little Bridy. It was prevalent also on 21 days in September, but for the most part in the south of England.

Solar Halos were seen on the 1st and 11th of July at Little Bridy; on the 16th at Little Bridy and the Isle of Man; on the 17th, 19th, 20th, and 23d at Little Bridy; on the 28th at Grantham; on the 29th at Berkhamstead, Grantham, and Nottingham; and on the 31st at Little Bridy. On the 2d and 6th of August at Little Bridy; on the 13th at Grantham; on the 15th at Little Bridy; on the 16th at Berkhamstead; and on the 29th at Little Bridy. On the 2d of September at Hartwell Rectory; on the 17th at Clifton; and on the 18th at Nottingham and Hawarden.

Lunar Halos were seen on the 6th of July at Truro; on the 18th at Little Bridy; on the 26th at Aldershot, Camden Town, Berkhamstead, and Nottingham; and on the 27th and 30th at Hawarden. On the 14th of August at Truro; on the 22d at Hereford; on the 23d at Berkhamstead; on the 25th at Aldershot; on the 28th at Little Bridy and Clifton; and on the 31st at Truro. On the 1st of September at Cardington; on the 16th at Berkhamstead; on the 20th at Helston, Little Bridy, and Clifton; on the 24th at Little Bridy and Nottingham; and on the 25th at Little Bridy.

Aurora was seen on the 16th of July at Liverpool.

Wheat cut on 17th July at Royston; on the 19th at Berkhamstead; on the 20th at Cardington and Osborne; on the 23d at Teignmouth; on the 26th at Little Bridy and Grantham; on the 27th at Barnstaple and Belvoir; and on the 28th at Norwich. On the 2d of August at Helston; on the 3d at Fairlight; and on the 7th at Stonyhurst.

Barley cut on 26th July at Bywell; on the 29th at Helston and Royston; and on the 31st at Osborne and Little Bridy. On the 5th of August at Berkhamstead; on the 20th at Grantham; and on the 25th at Fairlight.

Oats cut on 13th July at Helston; on the 14th at Osborne; on the 26th at Grantham; on the 27th at Belvoir; on the 29th at Barnstaple; and on the 30th at Little Bridy. On 2d August at Berkhamstead; on the 7th at Fairlight; and on the 28th at Stonyhurst.

Silloth -	29°544	82°8																								

The highest temperature of the air reached 90° at a few places, and was above 80° at nearly all stations. The lowest were at Lampeter, 36°4; at York, 37°0; at Holkham, 37°2; at Belvoir, 37°3; and at Silloth, 37°6. The greatest daily ranges were at Hartwell House, 23°3; at Nottingham and Ryde 22°3; at Hereford, 21°9; at Greenwich 21°2; and at Camden Town 20°4. The least were at Guernsey, 9°1; at Ventnor, 9°2; at Scarborough, 9°5; at Liverpool, 10°8; and at Worthing, 12°8. Rain fell on the greatest number of days at Stonyhurst, Chorlton upon-Medlock, Royston, Truro, Ventnor, and Silloth. The heaviest falls were 17°3 in. at North Shields; 13°7 in. at Stonyhurst; 13°6 in. at Silloth; 10°4 in. at Little BrIdy; and 9°9 in. at Truro. The least were at

The Observations have been reduced to Mean values by Glaisher's Barometrical and Diurnal Range Tables, and the Hygrometrical results have been deduced from his second edition of Hygrometrical Tables.

REGISTRARS' NOTES.

In compliance with the following instruction, remarks have in many instances been appended by the Registrars to their Returns; from which the following Notes have been selected. The Registrars alone must be considered responsible for the opinions which they express.

INSTRUCTION TO REGISTRARS:—

"If the Deaths registered during the quarter have been above or below the average, mention whether the state of sanitary arrangements, movement of the population, the weather, prevalence or decline of Small-pox, Measles, Scarlatina, Hooping-cough, Typhus, Cholera, Bronchitis, or other disease,—more or less attention to Vaccination and other measures—does, in your opinion, wholly or partially account for the fact. Also with regard to increase or decrease of Births, you may mention any circumstance to which it may be attributed. By 'Average' must be understood *not* the average of numbers in other quarters of the year, but the average of *corresponding* quarters in four or five previous years."

The figures prefixed refer to the numbers of the District and Sub-District. The name of the District is in SMALL CAPITALS, that of the Sub-district in *italics*.

II. SOUTH-EASTERN COUNTIES.

1. SURREY (*Extra-metropolitan*).

39; 1. GUILDFORD; *Woking*.—Births 37; Deaths 25. The deaths are somewhat above the average. Diphtheria and pneumonia have been prevalent in the district. Four children died of the former, and two of the latter disease. The fatal cases were confined to two families.

42; 1. HAMBLEDON; *Witley*.—Births 43; Deaths 43. The deaths are above the average; measles and scarlatina having been very prevalent in the district.

2. KENT (*Extra-metropolitan*).

57; 3. TONBRIDGE; *Brenchley*.—Births 44; Deaths 28. The deaths are rather numerous. Six occurred from epidemic throat disease, which has extensively prevailed. There have been a few cases of clear cynanche maligna, without laryngo-tracheal symptoms, and without the formation of any special membranous deposit, in which when death occurred, it arose from sinking, and from tonsillitic dysphagia and suffocation. There have been a few cases of purer diphtheria, with little tumefaction, no swelled glands, slight constitutional symptoms, a yellowish plastic membrane about fauces, and great dyspnoea or actual suffocation from mechanically obstructed windpipe, the fauces and pharynx not being occluded at all. In one of these cases I traced the false membrane after death down into the bronchi, far below the possibility of tracheotomy; and there have been other cases (5 or (under my own observation) of a remarkably intermediate character, presenting the inflamed tonsil, the enlarged sub-maxillary glands, the foetid breath, the very foul tongue, the serous discharge from nares, excoriating lip, the dysphagia and prostration simultaneously with the exudation of leathery matter, removable sometimes in flakes weighing a drachm, and made up of agglomerated epithelial cells. The surface of velum from which I have taken them remained rather raw and bloody, but not excavated, basement membrane seemingly entire. Several of these cases occurred in a low but not densely populated locality, where several fatal cases of malignant quinsey occurred 25 years ago.

58; 5. MAIDSTONE; *East*.—Births 91; Deaths 85. The deaths are considerably above the average. Measles, hooping-cough, and scarlatina have been prevalent during the quarter. 47 of the deaths registered were those of children under 6 years of age.

74; 1. ROMNEY MARSH; *New Romney*.—Births 28; Deaths 31. Typhus, scarlatina, and remittent fever have been prevalent and fatal; and to these fevers the increase of mortality is due. The scarcity and bad quality of the water, in consequence of the great dryness of the weather, may have been the exciting cause.

3. SUSSEX.

85; 2. BRIGHTON; *St. Peter*.—Births 367; Deaths 294. The deaths are above the average. Diarrhoea and other zymotic diseases have prevailed among children.

4. HAMPSHIRE.

97; 1. ALVERSTOKE; *Alverstokey*.—Births 166; Deaths 127. Small-pox was fatal in 10 cases.

5. BERKSHIRE.

127; 1. READING; *St. Mary*.—Births 89; Deaths 55. Small-pox prevalent; 3 deaths occurred in five days.

130; 1. EASTHAMPTON; *Bracknell*.—Births 37; Deaths 42. Scarlatina has been very prevalent in this district during the last quarter, and 12 deaths have been registered from it.

III. SOUTH MIDLAND COUNTIES.

10. NORTHAMPTONSHIRE.

169; 2. DAVENTRY; *Daventry*.—Births 62; Deaths 58. Typhoid fever has been rather prevalent in Daventry during the past quarter, and several deaths have occurred from it; but the mortality does not appear to be much, if any, above the average. The fever is supposed to be principally from defective drainage in that part where it occurred, as very nearly all the cases were confined to a very small space. The disease, however, appears to be rapidly declining.

11. HUNTINGDONSHIRE.

176; 3. HUNTINGDON; *Spaldwick*.—Births 36; Deaths 37. Deaths above the average, from fever in the parish of Ellington.

IV. EASTERN COUNTIES.

14. ESSEX.

197; 2. ROMFORD; *Great Ilford*.—Births 44; Deaths 35. Three cases of scarlatina and one of typhus have occurred in the quarter, in a district

where drainage has not been well attended to; otherwise the district has been healthy.

203; 2. TENDRING; *Thorpe*.—Births 32; Deaths 28. The births and deaths are much below the average. Typhus is prevalent in some parts of this neighbourhood; and it has proved fatal in many cases.

15. SUFFOLK.

211; 3. RISBRIDGE; *Clare*.—Births 35; Deaths 32. Of the deaths 4 were from hooping-cough and 11 from diphtheria.

227; 1. MUTFORD; *Kessingland*.—Births 33; Deaths 32. 6 deaths of children are registered as caused by scarlatina.

16. NORFOLK.

228; 1. YARMOUTH; *Southern*.—Births 104; Deaths 101. The deaths in the quarter continue above the average. Scarlatina, measles, hooping-cough, and diarrhœa have prevailed. 13 deaths occurred from scarlatina, 5 from typhus, 5 from hooping-cough, 3 from measles, and 18 from diarrhœa.

228; 2. YARMOUTH; *Northern*.—Births 125; Deaths 142. The deaths are much above the average, which is attributable, I think, to diarrhœa and fever.

230; 2. TUNSTEAD; *Smallburgh*.—Births 29; Deaths 56. Diphtheria has greatly increased the number of deaths in the quarter.

230; 4. TUNSTEAD; *Bacton*.—Births 16; Deaths 21. Diphtheria has prevailed in this sub-district, and 9 cases of that disease have been registered. 6 children of one family at Swafeld all died of it in less than 5 weeks.

232; 2. AYLHAM; *Buxton*.—Births 60; Deaths 36. The deaths are much below the average, being the smallest number ever registered. The district has been unusually healthy during the quarter, although there were 8 cases of diphtheria.

246; 1. KING'S LYNN; *North*.—Births 21; Deaths 22. Typhus has been very prevalent in the district during the last three months; but it has been almost entirely confined to a yard which is remarkable for offensive privies and accumulations of filth. Four deaths have resulted from it.

247; 2. DOWNHAM; *Downham*.—Births 71; Deaths 39. A woman named Fanny Smith died this quarter in Downham, aged 105 years and 11 months.

V. SOUTH-WESTERN COUNTIES.

17. WILTSHIRE.

253; 4. CHIPPENHAM; *Christian Malford*.—Births 23; Deaths 18. Diphtheria has made its appearance in several villages, and in a few cases among children it has proved fatal.

257; 1. MELKSHAM; *Melksham*.—Births 38; Deaths 36. In the return of deaths there are 11 cases of diphtheria; they are confined to the chapelry of Seend.

18. DORSETSHIRE.

278; 2. BRIDPORT; *Bridport*.—Births 72; Deaths 53. The deaths are above the average, in consequence of the prevalence of small-pox.

19. DEVONSHIRE.

279; 1. AXMINSTER; *Lyme*.—Births 31; Deaths 25. But for small-pox and hooping cough the deaths would have been under the average. I have to record 4 from small-pox; and it appears that in none

of these cases had there been previous vaccination. I am of opinion that if vaccination had been practised more generally in this district the disease which has been existing here since the beginning of the year might have been stayed.

281; 1. ST. THOMAS; *East Budleigh*.—Births 23; Deaths 27. Measles has prevailed as an epidemic, but not very fatally. The district, however, in some parts, has been unusually unhealthy, and the deaths have risen somewhat above the average.

281; 4. ST. THOMAS; *Broadclist*.—Births 39; Deaths 18. Scarlatina has been very prevalent, and also bilious fever; 3 deaths from the former and 2 from the latter occurred during the quarter.

282; 1. EXETER; *St. Sidwell*.—Births 110; Deaths 117. Scarlatina and measles have been rife, and have contributed 21 deaths.

285; 5. KINGSBRIDGE; *Modbury*.—Births 27; Deaths 30. Scarlatina has been fatal to 14 children.

287; 1. PLYMOUTH; *Charles-the-Martyr*.—Births 180; Deaths 113. The deaths are considerably less than in the corresponding quarter of 1857. Hooping-cough and scarlatina have been prevalent; 8 deaths from the former and 5 from the latter appear in this quarter's returns. 3 cases of small-pox (unvaccinated) have also been registered.

287; 2. PLYMOUTH; *St. Andrew*.—Births 320; Deaths 170. The deaths are 12 less than the mean of five corresponding seasons, and 61 less than in the summer of last year, notwithstanding the prevalence of small-pox and scarlatina. Small-pox was fatal in 11 cases (all unvaccinated); scarlatina in 8.

20. CORNWALL.

302; 3. ST. GERMANS; *Saltash*.—Births 48; Deaths 44. Deaths much above the average from the presence of malignant scarlatina amongst children in the parish of Quethiock.

308; 1. FALMOUTH; *Mylor*.—Births 39; Deaths 36. The deaths above the average. There are many cases of diphtheria.

310; 4. REDRUTH; *Camborne*.—Births 127; Deaths 48. The births are slightly above and the deaths a little below the average of the quarter. Small-pox has been prevalent throughout the district, and four deaths have been registered from this disease; three having occurred to children and one to an adult, in all of whom vaccination had been neglected.

21. SOMERSETSHIRE.

315; 4. TAUNTON; *St. James*.—Births 68; Deaths 55. There have been 8 cases of small-pox; the disease is now subsiding.

315; 5. TAUNTON; *Bishops Lydeard*.—Births 18; Deaths 17. There is an increase of small-pox.

317; 3. LANGPORT; *Curry Rivell*.—Births 49; Deaths 28. Small-pox has been prevalent during the past quarter at Barrington, Nidon, and at Hambridge, a hamlet of Curry Rivell, all in this district; but only one case resulted fatally.

318; 3. CHARD; *Chard*.—Births 49; Deaths 27. Two deaths have occurred from small-pox, and the disease still prevails.

319; 3. YEOVIL; *Martock*.—Births 44; Deaths 27. Small-pox has prevailed during the last quarter to a considerable extent, but chiefly in the adjacent parishes. The deaths, however, have been comparatively few. In this parish, with a population of 3,000 and upwards, we have not had more than 8 or ten cases, and those chiefly where vaccination had been neglected or

objected to. I find that nothing but a house-to-house attendance will succeed in making vaccination general; and that the system of appointing stations proves wholly useless. Measles has of late been rather prevalent. The number of deaths, notwithstanding these epidemics, has been below the average.

326; 3. BATH; *Abbey*.—Births 63; Deaths 87. The mortality is high for this period of the year. Deaths from diarrhoea 6, English cholera 2, rubeola 2, scarlatina 3, malignant sore throat 1, diphtheria 3, small-pox 12. Of these last only 2 are reported as having occurred after vaccination.

326; 4. BATH; *Lyncombe*.—Births 69; Deaths 81. In continuation of my last quarter's report on small-pox, I have to add, that it continued very prevalent during July, was considerably abated in August and September, and has now almost disappeared. Of 81 deaths during the quarter, 20 were from small-pox (in July 10, August 5, and September 5). At least 16 of the above cases were unvaccinated.

326; 6. BATH; *Lansdown*.—Births 78; Deaths 83. The deaths are 26 above the average, owing principally to the continuance of small-pox, from which 14 persons have died. 11 of these had never been vaccinated, and it is doubtful whether the 3 others were not also without protection. No death has been registered from small-pox since 2d September, and I am in good hopes it has left the district, which now appears to have recovered its usual healthy state, being free from any epidemic.

VI. WEST MIDLAND COUNTIES.

22. GLOUCESTERSHIRE.

329; 1. BRISTOL; *St. Mary Redcliff*.—Births 105; Deaths 99. The deaths are above the average, owing to the prevalence of scarlatina.

329; 4. BRISTOL; *St. James*.—Births 72; Deaths 117. The small-pox, which was epidemic throughout the district during the previous quarter, has entirely disappeared. Scarlatina, which began to show itself towards the close of that quarter, has been on the increase during the last three months. The deaths of 22 children have been registered from that disease. Two deaths from puerperal fever likewise have occurred. The mortality has been higher than in any corresponding quarter during the last five years.

329; 5. BRISTOL; *St. Augustine*.—Births 115; Deaths 80. Scarlatina has been very fatal in my district. Out of the 80 deaths registered during the quarter 25 are assignable to that disease. There have also been a few cases of typhus, and 4 deaths from small-pox.

336; 2. GLOUCESTER; *St. Nicholas*.—Births 58; Deaths 60. The deaths are above the average in consequence of the prevalence of small-pox, which was fatal in 19 cases.

336; 3. GLOUCESTER; *St. John the Baptist*.—Births 65; Deaths 28. The deaths are below the average. There were 4 cases of small-pox.

336; 4. GLOUCESTER; *South Hamlet*.—Births 110; Deaths 52. Deaths from small-pox 4, scarlatina 7.

24. SHROPSHIRE.

359; 1. ATCHAM; *Condover*.—Births 31; Deaths 24. The want of an efficient power to enforce sanitary reforms is in this place an evil which every day grows worse. The country parishes being very thinly populated, seem hardly to be capable of "self-government." Any interference is certain to assume the character of

a personal attack, consequently no one likes to begin, and nuisances increase abundantly. In the quarter I registered two deaths which can only be traced to bad sanitary condition.

360; 1. SHREWSBURY; *St. Mary*.—Births 120; Deaths 90. Both are near the average. Small-pox is and has been prevalent for above two years. Eleven cases occurred this quarter; 2 after successful vaccination, 2 doubtful, and 7 decidedly without previous vaccination.

25. STAFFORDSHIRE.

370; 3. WOLSTANTON; *Burslem*.—Births 225; Deaths 125. The deaths are 25 above the average of the last five corresponding quarters. This is the heaviest summer return since 1852. Measles and diarrhoea have been prevalent during the quarter. I have registered 7 deaths from the former, and 10 from the latter disease.

371; 5. STOKE-UPON-TRENT; *Longton*.—Births 166; Deaths 85. Had it not been for the prevalence of small-pox, from which 20 deaths have been registered, the mortality of the last quarter would have been below the average.

379; 7. WOLVERHAMPTON; *Bilston*.—Births 285; Deaths 166. There have been 25 fatal cases of scarlatina.

27. WARWICKSHIRE.

394; 3. BIRMINGHAM; *St. Martin*.—Births 281; Deaths 234. The deaths show an increase of 77 above the average of corresponding quarters of the last 5 years. Scarlatina has been very prevalent, and proved fatal in 53 cases; diarrhoea in 32; whooping-cough in 12; small-pox in 6 (all of these without vaccination).

394; 8. BIRMINGHAM; *St. George*.—Births 410; Deaths 259. Diarrhoea was fatal in 43 cases, scarlatina in 24, small-pox in 4.

400; 2. COVENTRY; *Holy Trinity*.—Births 200; Deaths 105. Of the deaths in this sub-district during the past quarter, 62 are those of children under 5 years old, of which 40 are under one year. The most prevailing causes of death have been as usual amongst children; diarrhoea, convulsions, marasmus. There were also 10 fatal cases of small-pox. This disease, however, has much subsided towards the latter part of the quarter. Amongst the certified causes of death, there are 3 instances of diphtheria at the respective ages of 1, 13, and 48 years.

404; 3. STRATFORD-ON-AVON; *Stratford-on-Avon*.—Births 42; Deaths 45. The rate of mortality has been unusually great on account of the prevalence of scarlatina maligna, from which 17 deaths have been registered. It appears to be epidemic, as cases occur in clean and well-ventilated abodes, but it has been more fatal in close, dirty, and ill-ventilated parts.

VII. NORTH-MIDLAND COUNTIES.

28. LEICESTERSHIRE.

411; 2. BLABY; *Enderby*.—Births 70; Deaths 30. There has been no epidemic during the last 3 months, except fever, which has been fatal amongst children in many instances.

416; 4. BARROW-UPON-SOAR; *Syston*.—Births 44; Deaths 30. Small-pox has been very bad in the parishes of Syston and North and South Thurmaston. No deaths occurred to persons vaccinated, but a few to those who had not been protected.

30. LINCOLNSHIRE.

429; 2. HORNCastle; *Horncastle*.—Births 71; Deaths 68. The deaths are much above the average, 25 having occurred from diphtheria (all to children under 12 years of age). This disease now prevails to a great extent, but the deaths from it have been confined to children.

429; 4. HORNCastle; *Tattershall*.—Births 58; Deaths 19. The births are over the average, but the deaths exceedingly low. Diphtheria has prevailed extensively, and 5 cases proved fatal. It is, however, greatly abated.

432; 3. CAISTOR; *Market Rasen*.—Births 75; Deaths 56. Deaths rather above the average; principally from diphtheria.

31. NOTTINGHAMSHIRE.

438; 1. BASFORD; *Greasley*.—Births 164; Deaths 105. The deaths are much heavier than in the corresponding quarter of last year. Hooping-cough and scarlatina have been very general, and often fatal.

438; 2. BASFORD; *Ilkeston*.—Births 145; Deaths 88. The deaths have exceeded the average, owing to the continuance of scarlatina, which has caused 43 deaths during the 3 months.

438; 3. BASFORD; *Basford*.—Births 147; Deaths 90. The number of deaths is not above the average, though scarlatina has prevailed extensively, and been fatal in 17 cases.

438; 4. BASFORD; *Bulwell*.—Births 77; Deaths 47. Scarlatina has prevailed much in the parish of Bulwell this quarter. Many deaths have occurred among children from one to four years of age.

440; 3. NOTTINGHAM; *St. Ann*.—Births 143; Deaths 147. Both are slightly above the average of the last 5 corresponding quarters. Small-pox and scarlatina are prevalent in this district; 7 deaths have been caused by the former disease, and 11 by the latter.

442; 1. NEWARK; *North Collingham*.—Births 44; Deaths 19. The whole of my district has been very healthy during the last quarter. Diphtheria has prevailed. In my own practice I have attended 40 cases of it, and lost none. Looking on it as a disease of debility, I have from the beginning treated it with quinine and acid, port wine, and beef tea. Where the patient has been old enough to gargle, I have used gargles of chloride of soda, and in every case applied the solid nitrate of silver daily to the tonsils till the sloughs have disappeared. I may state that two children died, but I was not called till they were *in articulo mortis*.

32. DERBYSHIRE.

445; 2. DERBY; *St. Peter*.—Births 287; Deaths 194. The deaths would have been less than the average, but for the prevalence of scarlatina, from which 45 deaths occurred during the quarter. Only 4 or 5 cases of small-pox are included in this return. The last 3 cases registered occurred in one house yesterday, all within 12 hours. I went immediately to inspect the place, and found it almost surrounded with privies, emitting a most offensive smell, to which I at once called the attention of the inspector of nuisances.

446; 6. BELPER; *Wirksworth*.—Births 43; Deaths 30. The deaths are a little over the average. Scarlatina has been very prevalent, and 10 deaths are from this cause. Low typhus has also prevailed, but no deaths from it have yet followed.

447; 6. ASHBURN; *Brassington*.—Births 35; Deaths 26. The deaths are above the average, scarlatina having been very prevalent.

VIII. NORTH-WESTERN COUNTIES.

33. CHESHIRE.

453; 2. MACCLESFIELD; *Bollington*.—Births 68; Deaths 38. The deaths have been much below the average for some time, which, I think, may be attributed to the favourable state of the weather, and to the greater cleanliness of the dwellings of the poor, owing to the establishment of a sanitary society in a part of this district.

457; 2. CONGLETON; *Congleton*.—Births 150; Deaths 125.—The deaths are much above the average, owing to the prevalence of scarlatina.

34. LANCASHIRE.

461; 1. LIVERPOOL; *St. Martin*.—Births 525; Deaths 625. The deaths are numerous this quarter, owing to the prevalence of diarrhoea and scarlatina, which have been fatal in a great number of cases; bronchitis has also been prevalent. Small-pox, I am happy to say, has greatly abated.

461; 6. LIVERPOOL; *Mount Pleasant*.—Births 345; Deaths 444. Scarlatina has been very prevalent and fatal amongst children; otherwise the district is very healthy.

462; 6. WEST DERBY; *West Derby*.—Births 429; Deaths 262. It is proper to remark the continued healthiness of my district, which is owing to the excellent sanitary measures and regulations that have for some years been adopted by the health committee of the town council of Liverpool (the greatest part of my district is within the municipal borough). On reference to my returns made to you for the last five years it will appear that the births have been nearly double the deaths.

463; 5. PRESCOT; *Prescot*.—Births 122; Deaths 47. Cholera was prevalent during the quarter. 2 deaths occurred from cholera and 3 from diarrhoea.

463; 6. PRESCOT; *St. Helens*.—Births 367; Deaths 187. From diarrhoea 38 deaths; from cholera 7. The district at present healthy.

465; 7. WIGAN; *Ashton in Makerfield*.—Births 76; Deaths 10. This return is very remarkable as showing the greatest number of births and the smallest number of deaths in corresponding quarters for 21 years; not only so, but the deaths give the lowest return of any quarter since the Registration Act came into operation. The present number of inhabitants is about 6,000. Talk of salubrious districts! but where is the district or township of 6,000 persons that has a lower rate of mortality than one death to 600 persons in a quarter containing 92 days!

468; 10. BOLTON; *Little Bolton*.—Births 243; Deaths 117. The deaths are much below the average for this quarter, and the district has been remarkably healthy for several months past. Employment has been abundant, provisions cheap and plentiful, which, together with the extreme mildness of the season, has probably caused the diminution of sickness and mortality.

468; 12. BOLTON; *Bolton Western*.—Births 255; Deaths 140. Although the deaths are not above the average of corresponding quarters, small-pox has been prevalent and fatal in many cases; not one of the sufferers who died of it had been vaccinated.

471; 3. CHORLTON; *Chorlton upon Medlock*.—Births 336; Deaths 252. The deaths are far above the average of corresponding quarters for the last 6 years. The heavy mortality is clearly attributable to fever, scarlatina, and hooping-cough, of which respectively

there have died 12, 37, and 37 persons, in all 86. It is to be regretted that in this town most heads of families are satisfied with their own skill; in medicine "a little knowledge is a dangerous thing." It is seldom that a medical man is consulted in infantile complaints till symptoms dangerous to life manifest themselves. The deaths from diarrhoea, chiefly infantile, have been 21, dysentery 4, and ordinary cholera 2. These numbers are far below the average; in fact, for the last 2 years there has been a remarkable freedom from bowel complaints. No less than 155 of those who died were under 6 years of age.

472; 3. SALFORD; *Greengate*.—Births 320; Deaths 317. Births and deaths are about the average. Many children are ill with scarlatina in this district, owing to the dirty habits of their parents, and the ill-ventilated cottages in which they live.

472; 4. SALFORD; *Regent Road*.—Births 285; Deaths 270. The deaths are 52 above the average of corresponding quarters in the five previous years; 62 were caused by scarlatina, and 44 by diarrhoea.

473; 2. MANCHESTER; *Deansgate*.—Births 226; Deaths 266. Exclusive of the coroner's cases, the deaths during the past quarter have been 242, a number which, compared with the births, appears to be above the due average. Many streets have been pulled down in my district lately to make way for warehouses, mills, stations, &c., and I apprehend the population is considerably diminished. More than half of these deaths, indeed, nearly three fifths, 144 in 244, were those of children under 5 years old, of whom 55 were carried off by scarlatina, 42 by diarrhoea, 8 by hooping-cough, 7 by fever, 4 by measles, and 2 by small-pox.

473; 3. MANCHESTER; *London Road*.—Births 212; Deaths 220. The number of deaths is above that of births. Of the deaths, 133 occurred under 5 years of age, 72 of these under one year.

473; 4. MANCHESTER; *Market Street*.—Births 227; Deaths 385. The deaths are over the average of 6 quarters ending September 30th. Diarrhoea and scarlatina, the latter especially, have prevailed in an unusual degree.

473; 5. MANCHESTER; *St. George*.—Births 432; Deaths 385. The number of deaths is above the average, which may be accounted for by the prevalence of malignant scarlatina and diarrhoea; the numbers being from scarlatina 61, from diarrhoea 64.

473; 7. MANCHESTER; *Cheetham*.—Births 158; Deaths 74. Deaths about the average. Scarlatina and measles have been prevalent.

474; 6. ASHTON-UNDER-LYNE; *Dukinfield*.—Births 284; Deaths 171. The deaths are 7 below the average of 5 years. Small-pox, scarlatina, and rash fevers have been very prevalent; several severe cases of choleraic diarrhoea occurred, and one death from Asiatic cholera.

477; 5. HASLINGDEN; *Accrington*.—Births 150; Deaths 94. The deaths are 34 above the average of corresponding quarters of four previous years. Scarlatina 9 deaths, variola 4, diarrhoea 7, cholera 3.

478; 3. BURNLEY; *Colne*.—Births 178; Deaths 109. The deaths are 18 above the average of four corresponding quarters. The excess is caused by scarlatina, which has prevailed in part of the district, and has been fatal in 18 cases.

479; 4. CLITHEROE; *Clitheroe*.—Births 86; Deaths 79. The deaths are 33 above the average of corresponding quarters of five previous years. Scarlatina still exists in this district in its epidemic character, and in the quarter it proved fatal in 33 cases.

481; 4. CHORLEY; *Chorley*.—Births 146; Deaths 142. The deaths are considerably in excess of the average, owing to the prevalence of scarlatina, from which cause alone 46 deaths have occurred.

482; 2. PRESTON; *Preston*.—Births 725; Deaths 563. The deaths are 70 above the average of five corresponding quarters. 122 occurred from diarrhoea, 24 from scarlatina.

482; 3. PRESTON; *Walton-le-Dale*.—Births 44; Deaths 45. The births are the lowest number of any quarter since the commencement of the registration Act, which to some extent may be accounted for by the cotton mills at Bashall's-row, at School-lane, at Roach mill, Riding's farm, and one at Samlesbury mill, all in this sub-district, being entirely closed, and the inhabitants to a great extent having left the parts. The deaths are above the average. Scarlatina of a bad sort prevails in the district. I have registered 4 deaths from it.

483; 1. FYLDE; *Kirkham*.—Births 60; Deaths 60. Malignant scarlatina has been prevalent the last 3 or 4 months.

483; 3. FYLDE; *Poulton-le-Fylde*.—Births 96; Deaths 55. The sub-district at present is tolerably healthy. We have had a plentiful harvest, and the working classes have been fully employed at remunerating wages, which, together with cheap bread, has probably improved the health of the district.

486; 3. ULVERSTONE; *Ulverstone*.—Births 93; Deaths 57. Small-pox continues. 8 fatal cases more have been registered.

IX. YORKSHIRE.

35. WEST RIDING.

494; 2. KEIGHLEY; *Keighley*.—Births 200; Deaths 200. The deaths are much above the average. There were 33 from measles, and 23 from scarlatina.

497; 2. HUDDERSFIELD; *Meltham*.—Births 60; Deaths 42. The number of deaths is not less than 53 per cent. above the average of corresponding quarters of the last five years. This great increase is principally owing to scarlatina, which still prevails in this district, and continues to prove fatal to many; its victims are principally children under 13 years of age.

498; 4. HALIFAX; *Halifax*.—Births 288; Deaths 240. The deaths are 38 above the average, which may be accounted for by the continued prevalence of scarlatina, which has caused nearly an eighth part of the whole number.

498; 10. HALIFAX; *Northowram*.—Births 178; Deaths 102. The deaths are 4 under the average. I may, however, mention that one fifth of them has been from scarlatina.

499; 5. BRADFORD; *East End*.—Births 224; Deaths 176. The deaths are about an average, although scarlatina has been fatal in 30 cases, typhus in 16, and diarrhoea in 14.

499; 6. BRADFORD; *West End*.—Births 170; Deaths 140. The mortality is above the average, owing to the late drought, and the scarcity and bad quality of the water. Many deaths arose from scarlatina, fever, and diarrhoea; from scarlatina, 34.

499; 7. BRADFORD; *Horton*.—Births 340; Deaths 266. The deaths are 22 above the average, scarlatina having been very prevalent.

499; 13. BRADFORD; *Pudsey*.—Births 110; Deaths 80. The deaths are above the average of corresponding quarters in 5 previous years, that average being 65. The increase may in part be attributed to the

prevalence of scarlatina, which has proved fatal in 16 cases.

505; 2. **BARNSLEY**; *Barnsley*.—Births 267; Deaths 163. The deaths are 28 above the average of three corresponding quarters. Two deaths from diphtheria and 4 from typhus occurred at Dodworth, where sanitary measures are said to be very imperfect, and supply of water insufficient. The inhabitants are taking steps for introducing the Public Health Act into the village. The linen trade is moderately good, all the mills working full time, and the hand-loom weavers generally employed. The coal trade is unsettled, the differences between masters and men at the Oaks Colliery being still in existence. The men (about 50) have been ejected from the dwelling houses belonging to the masters, and are now, with their families, encamped in the open air. Several breaches of the peace have occurred. Hopes, however, are entertained of an early arrangement. The harvest, a very bountiful one, has been well secured. Potatoes are good in quantity and quality, and reasonable in price; butchers' meat continues high.

508; 2. **SHEFFIELD**; *North Sheffield*.—Births 340; Deaths 287. From diarrhoea 33 deaths, from scarlatina 22, from smallpox 4.

508; 3. **SHEFFIELD**; *South*.—Births 152; Deaths 99. A large proportion (15) of the deaths in this quarter has been caused by throat affections. At No. 42 in Arundel-lane 5 children died of diphtheria on the following days: 3d July, 23d July, 27th July, and 12th August.

508; 4. **SHEFFIELD**; *Sheffield Park*.—Births 140; Deaths 135. From scarlatina 25 deaths, diphtheria 5, cynanche 5, small-pox 3.

508; 5. **SHEFFIELD**; *Brightside*.—Births 252; Deaths 109. The deaths are 4 below the average of five previous corresponding quarters. Diphtheria, diarrhoea, and scarlatina have been prevalent. With these exceptions the district may be said to be in a healthy state.

36. EAST RIDING.

522; 5. **SKIRLAUGH**; *Brandesburton*.—Births 18; Deaths 17. The increase of deaths is owing to the prevalence of typhus and diphtheria.

37. NORTH RIDING.

526; 1. **MALTON**; *Rillington*.—Births 29; Deaths 7. The district has been remarkably healthy, the chief affections being choleraic, materially induced by improper beverages in harvest operations.

532; 1. **GUISBROUGH**; *Lofthouse*.—Births 19; Deaths 21. The deaths are double the average of corresponding quarters in 5 previous years. This is to be accounted for by the prevalence of a disorder called "diphtheria," or, as it is certified by the medical attendant, "malignant sore throat." It has been fatal to 7 children, all under 14 years of age. Several adults suffered from the disorder, but have recovered.

534; 2. **NORTHALLERTON**; *Northallerton*.—Births 76; Deaths 44. Although diarrhoea, cynanche maligna, bilious fever, and typhus have been very prevalent (from the last complaint 4 deaths have been registered) the deaths are a little below the average.

X. NORTHERN COUNTIES.

38. DURHAM.

545; 3. **DURHAM**; *St. Oswald*.—Births 121; Deaths 115. The deaths are above the average. Fever, diarrhoea, and small-pox have been prevalent and fatal during the quarter.

545; 4. **DURHAM**; *St. Nicholas*.—Births 252; Deaths 133. The deaths are below the average. Diarrhoea, fever, and small-pox have been very prevalent.

546; 1. **EASINGTON**; *Easington*.—Births 227; Deaths 165. The deaths are considerably above the average, which is 124. Measles was prevalent at the commencement of the quarter. Hooping-cough is prevalent at the present time, and there have been several fatal cases of it; there have also been some deaths from small-pox.

39. NORTHUMBERLAND.

558; 2. **MORPETH**; *Bedlington*.—Births 122; Deaths 82. The deaths are much above the average. Typhus has been very prevalent for the last six or seven weeks in the parish of Bedlington.

40. CUMBERLAND.

569; 1. **WIGTON**; *Wigton*.—Births 74; Deaths 47. We have had a great deal of small-pox in the town of Wigton all the quarter, but only 2 cases have ended fatally.

XI. MONMOUTHSHIRE & WALES.

43. SOUTH WALES.

585 a; 2. **SWANSEA**; *Llangafelach*.—Births 99; Deaths 80. From scarlatina 15 deaths.

585 a; 3. **SWANSEA**; *Swansea*.—Births 271; Deaths 186. Scarlatina prevails; 15 deaths have occurred from that cause during the quarter, 8 from measles, and 11 from small-pox. The last is gradually declining.

589; 3. **CARMARTHEN**; *Carmarthen*.—Births 96; Deaths 86. 19 deaths from small-pox have been registered in September.

591; 2. **PEMBROKE**; *Pembroke*.—Births 102; Deaths 63. Small-pox very prevalent. In no instance has it been clearly established that the patient had been vaccinated.

592; 1. **HAVERFORDWEST**; *Milford*.—Births 74; Deaths 42. Small-pox and fever have been very prevalent, but only 4 cases of fever and 3 of small-pox have been fatal. Vaccination is now particularly attended to by parents of children, and medical men connected with the board of guardians.

44. NORTH WALES.

622; 3. **CONWAY**; *Llechwedd Isaf*.—Births 13; Deaths 19. Typhus and scarlatina very prevalent.

MORTALITY in LIVERPOOL and in ELY to 1,000 living, in each of the years 1838 to 1857.

YEARS A.D.	LIVERPOOL.			ELY.
	ANNUAL RATE OF MORTALITY (or yearly deaths to 1,000 living).			
	Liverpool District (parish).	Sub-districts of— Toxteth Park, Everton, West Derby.	Liverpool Borough (nearly).	Ely† Sub-district.
1838	31	23	29	19
1839	34	23	32	21
1840	39	27	36	28
1841	34	26	32	26
1842	33	27	31	22
1843	32	25	30	29
1844	33	25	30	21
1845	31	24	29	28
1846	40	35	38	27
1847*	71 ?	37	61 ?	27
1848	38	31	36	34
1849	52	37	47	28
1850	29	23	27	18
1851	34	26	31	21
1852	33	25	30	20
1853	31	22	28	23
1854	38	25	34	20
1855	33	22	29	22
1856	29	20	26	18
1857	32	22	29	19

Note.—In making these calculations it is assumed that the population increased at the same rate between 1833 and 1857 as between the enumerations of 1841 and 1851. The population of the Borough of Liverpool in 1851 was 375,955, and that of Liverpool District (parish), with the sub-districts of Toxteth Park, Everton, and West Derby, was 388,360; the results given in the column headed “ Liverpool Borough ” refer to a wider area than that of the borough, and a population of 12,405 persons in 1851 living outside its limits.

* The Irish famine, as there was then no Poor Law in Ireland, drove large numbers of the sick and dying people to Liverpool. In this year one of the registrars made a large number of fraudulent entries. The mortality of 1847 in the Liverpool parish does not correctly represent the mortality of the inhabitants.

† Much of the sub-district of Ely, containing 8,092 people in 1851, is not under the Health Act, and has derived no benefit from its operation. Mr. Marshall confines his investigations to the city area.

DEATHS in 1857 in the BOROUGH of LIVERPOOL ; and the Number that would have happened, if the Rate of Mortality had been the same as in Healthy Districts of England.

	Deaths registered in 1857.	Deaths that would have hap- pened at the Rates prevailing in 63 Healthy Districts.	Excess of Deaths over the Deaths that would have happened at the Rates prevailing in 63 Healthy Districts.
LIVERPOOL BOROUGH	12,895	6,477	6,418
West Derby, Everton, and Toxteth Park Sub-districts - - }	3,778*	2,529	1,249
Liverpool District -	9,117	3,948	5,169

* The deaths actually registered in the three sub-districts were 4,176. To allow for the population included in the sub-districts, but not belonging to the borough, this number has been reduced to 3,778, by assuming that the deaths which occurred beyond the limits of the borough bore the same proportion to population as the total deaths bore to the total population of the three sub-districts.

The following report has been addressed to the Chairman of the Local Board of Health, Taunton, by Mr. C. H. Cornish, F.R.C.S., Registrar of Births and Deaths for the sub-district of Taunton St. Mary :—

To the Chairman of the Local Board of Health,
Taunton.

Sir, Taunton, 18th October 1858.

I have the honour of forwarding you, in continuation of the reports already sent you, my annual report of deaths and their causes, occurring within the Borough of Taunton during the year ending 30th September 1858.

The diseases I have divided into seven classes.

I have also added the number of births registered during the year.

DEATHS in the Borough of TAUNTON during the year ending 30th September 1858.

DISEASES.	QUARTERS ENDING				
	31st Dec. 1857.	31st March 1858.	30th June 1858.	30th Sept. 1858.	TOTAL.
1. Zymotic.—Fever - - -	5	1	-	4	10
Erysipelas - - -	1	-	-	2	3
Influenza - - -	2	-	-	-	2
Small-pox - - -	-	2	47	10	59
Croup - - -	1	2	2	1	6
Syphilis - - -	-	1	-	-	1
Hooping-cough - - -	-	-	3	5	8
Scarlet Fever - - -	-	-	1	1	2

	83	91	126	90	390
Age—Under 5 years - - -	28	27	68	37	160
5 years to 70 - - -	41	47	50	46	184
Above 70 - - -	14	17	8	7	46
	83	91	126	90	390
Births—Males 215 } Females 216 }	-	-	-	-	431

The number of deaths from Zymotic diseases indicate that sanitary measures are still far from being complete. I especially allude to vaccination, ventilation, and water. The dwellings of the poor are chiefly in confined cottages, with a very defective supply of water, and with rooms small and overcrowded; hence the difficulty, almost impossibility, of infants obtaining pure air; and hence the pallid hue, the glandular swellings, the predisposition to be affected by Zymotic diseases, and the large number of deaths under the age of five years, to which I request your attention.

Small-pox has been very prevalent and fatal; it commenced the latter end of March, rapidly rose to its culminating point in the quarter ending 30th June, and afterwards gradually declined. I believe the Borough is now free from its ravages. The births registered exceed the deaths by 41.

I have the honour to be, Sir,
Your obedient servant,
C. H. CORNISH, F.R.C.S.,
Registrar of Births and Deaths, District
of Taunton St. Mary.

[The following Index furnishes a reference to the *Number* of each DISTRICT in the Tables of Marriages, Births, and Deaths contained in this Return. Any District in the Registrars' Notes may be found in the same manner. In forming the alphabetical arrangement, the principle adopted has been to place compound names in the order in which they are pronounced.]

QUARTERLY RETURN

OF

THE MARRIAGES, BIRTHS, AND DEATHS

REGISTERED IN THE DIVISIONS, COUNTIES, AND DISTRICTS OF

ENGLAND.

By Authority of the Registrar General.

PUBLISHED BY EYRE AND SPOTTISWOODE, 9, EAST HARDING ST., FETTER LANE, E.C.

No. 40.]

Marriages, July, August, Sept, 1858.
Births and Deaths, Oct., Nov., Dec., 1858.

[Price 4d.

General Register Office, Somerset House,
1st February 1859.

THIS Return comprises the BIRTHS and DEATHS registered by 2197 Registrars in all the districts of England during the autumn quarter that ended on December 31st, 1858; and the MARRIAGES in 12,332 churches or chapels, about 4043 registered places of worship unconnected with the Established Church, and 630 Superintendent Registrars' offices, in the quarter that ended on September 30th, 1858.

The returns present an unfavourable aspect of the country. The marriages are below the average; and the deaths in the quarter are much above the average number. On this account, and on account of the increase of population, it has never before happened that so many deaths were registered in any autumn quarter as were registered in the last three months of the year 1858. The birth-rate was slightly above the average of the season.

The returns of the year 1858 show an excess of mortality in the six cold months, while the mortality in spring and summer was below the average. 1858 was an unhealthy year; and the birth-rate was slightly below the average.

MARRIAGES, BIRTHS, and DEATHS, returned in the Years 1846-58 and in the Quarters of those Years.

MARRIAGES.

38,628 weddings were celebrated in the quarter that ended on September 30th; consequently 77,256 persons were married. The numbers were below the numbers of the married in the corresponding quarters of 1857 and 1856. The decrease since 1856 is observable in London, and in the divisions south of the Thames. The marriages in Lancashire, Yorkshire, and the Northern Division were nearly stationary; in the Welsh Division they decreased.

BIRTHS.

The births of 158,007 children were registered in the quarter that ended on December 31st; so the births were at the annual rate of 3·198 per cent. or ·017 over the average of the quarter, but below the rates of the corresponding quarters of the two previous years.

655,627 births were registered in the year 1858, and the birth-rate was 3·358.

INCREASE OF POPULATION.

As 158,007 births and 118,663 deaths were registered, the natural increase of the population was 39,344, or 428 souls daily. The probable natural increase of population of the United Kingdom was 642 daily.*

7973, or, allowing for the numbers of undistinguished origin, about 9516 English emigrants,—103 daily,—sailed from the chief ports of the United Kingdom in the last three months of the year 1858; namely, 2834 to the United States, 6392 to the Australian colonies, 289 to other places.†

The natural increase of the population of England in the whole year was 205,609, or 563 daily.

113,972 emigrants sailed from the ports of the United Kingdom, in the year 1858. Of the number about 45,726 were of English origin; on an average 125 English men and women left our shores daily.

† The Table may be read thus, without reference to the decimal points:—In the year 1848 to 100,000 of the population of England there were 1594 persons married, 3247 births, 2306 deaths registered.—The annual rates of marriage in each of the four quarters were 1·322, 1·610, 1·510 and 1·922 per cent.; the rates of death 2·794, 2·313, 2·005, and 2·108 per cent. In reading the population on the first line add 3 ciphers (000). The 3 months January, February, March, contain 90, in leap year 91 days; the 3 months April, May, June, 91 days; each of the last 2 quarters of the year 92 days. For this inequality a correction has been made in the calculation.

* The Scotch returns have not yet been received; Irish births and deaths are not registered. The excess of births over deaths in England and Wales is raised 50 per cent., to represent approximately the excess in the United Kingdom.

† From a Return with which the Registrar General has been favoured by the Emigration Commissioners: the number returned as of English origin was 7,973, while the birthplace of 3360 was not distinguished; in the above statement a proportional number of these have been added to those returned as of English origin.

PRICES, THE WEATHER, AND PAUPERISM.

The funds rose and the prices of wheat continued to fall in the year 1858. Wheat was sold at 41s. 9d. a quarter on an average during the last thirteen weeks of the year; and the prices in the thirteen corresponding weeks of 1856 and 1857 were 63s. 4d. and 52s. 0d. The fall was 34 per cent. in two years. Beef by the carcase was 5 $\frac{2}{8}$ d., 5 $\frac{3}{8}$ d., and 5 $\frac{5}{8}$ d. per pound in the same seasons at Leadenhall and Newgate Markets; mutton 5 $\frac{6}{8}$ d., 5 $\frac{6}{8}$ d., and 5 $\frac{4}{8}$ d. The average prices of beef were stationary; but the average prices of the higher qualities fell from 6 $\frac{3}{4}$ d. to 6 $\frac{1}{2}$ d.; the prices of the lower qualities rose from 3 $\frac{3}{4}$ d. to 4d. Again the prices of the best mutton by the carcase was 6 $\frac{3}{4}$ d. at the beginning and the end of the period; but the price of the inferior mutton fell a halfpenny in the pound. Potatoes, which are so important an article of food, were sold at the rate of 100s., 140s., and 87s. 6d. a ton at the waterside market, Southwark, in the three last quarters of the years 1856-7-8. Potatoes have been 37 per cent. cheaper than they were in the corresponding weeks of 1857, and 12 per cent. cheaper than they were in 1856.

The weather in the last quarter was peculiar, and had considerable effect on the mortality. The average temperature of the three months at Greenwich was 43° 8', differing little (0° 2') from the average of the corresponding months of 87 years. But November was very cold; the mean temperature was 39° 6', and on the 24th of November the lowest temperature recorded was at many stations below 20°, that is 12° below the freezing point of water. The mean temperature has been lower in only twelve out of 87 Novembers. October and December were above the average

The AVERAGE PRICES of Consols, of Wheat, Meat, and Potatoes, also the AVERAGE NUMBER of Paupers relieved on the last day of each week, and the Mean Temperature, in each of the Nine Quarters ending December 31st, 1858.

* Deduced from the Weekly Tables published in the *Economist*. The average of the highest and of the lowest prices is here shown in cols. 3, 4, and 5, and not the absolute highest or lowest price quoted at any period of the quarter.

† Deduced from the Returns of the Poor Law Board. The returns relate to 644 Unions, &c., comprising a population of 17,651,136 (in 1851), and do not include the paupers of 288 parishes incorporated under Gilbert's Act, or still under the 43rd Elizabeth, containing a population of 276,473 in 1851; Lunatic Paupers in Asylums and Vagrants relieved in the above Unions are also excluded. They amounted on January 1st, 1858, to—Insane Persons, 19,487; Vagrants, 2,265. The rest of the paupers on that day amounted to 880,280.

temperature of those months. October and November were dry ; December moist. The *fall of rain* was deficient in each month ; for the fall was only 3' 1 in., and the deficiency in the quarter amounted to 4' 5 in. The rain-fall was in the four last years 1855-58 respectively 23' 5 in. ; 21' 5 in. ; 21' 4 in. ; and 17' 2 in. The 17' 2 in. of rain in 1858 is the lowest rain-fall since 1840 : in that year the rain-fall was 16' 4 in. The effect of this deficiency on the wells, and the water supply of the people generally, must be borne in mind ; for when the springs fail, stagnant water is sometimes drunk and employed for domestic use.

The Poor Law Board has favoured the Registrar General with returns, which are of great interest, and throw much light on the condition of the people. They require little explanation. We learn from them that on an average during the quarter that ended on December 31st last, 115,751 in-door paupers and 710,904 out-door paupers were relieved under the Poor Law ; or 826,655 persons in the aggregate were in the receipt of relief. The average number of out-door paupers in the last thirteen weeks of the years 1856, 1857, and 1858 were 720,003, 736,814, and 710,904. The number in the thirteen weeks of the last year is less than the numbers in the corresponding weeks of the two preceding years. In the year 1857 there were on an average 4' 49 in-door and out-door paupers to 100 of the population ; in 1858 the proportion was nearly the same (4' 51). The average numbers, after corrections for places making no returns, were 869,027 and 882,498. The first quarter of 1858 was a season of evident distress ; and the paupers then receiving relief amounted on a weekly average to nearly a million (974,017). The distress continued in spring, but diminished as summer advanced.

England thus under her system of Poor Laws bestows on one in 22 of her population, taking one day with another, relief to the extent of about 4*d.* a day, making in the aggregate about 6,000,000*l.* a year. This is perhaps not more than 2 per cent. on the income of all classes.

Some foreign writers occasionally speak of England as a country "eaten up" by pauperism ; they do not seem to be aware of the fact that in other countries—as in Ireland formerly,—the absence of a legally ordained system of relief implies aggravation and not absence of distress. It would be equally correct to look upon England as a country of wealthy ratepayers overflowing with Christian charity.

STATE OF THE PUBLIC HEALTH.

118,663 deaths were registered in the three months that ended on December 31st. After correcting for increase of population ; this implies that the mortality was at the annual rate of 2' 402 per cent., or rather more than 24 in 1000.

The mortality of the quarter in town districts was at the rate of 28 in 1000 living; in the districts of the country, of villages, and of small towns the mortality was at the rate of 21 in 1000 living. Upon taking the four quarters, of which the returns are now complete, the result is that the deaths of 450,018 persons were registered in the year 1858, and the annual mortality was at the rate of 23 in 1000; in the large town districts the annual rate was 25 or more; in the other districts, 21 in 1000 died.

The population of England is only enumerated every *ten* years, and the difficulty arising from our ignorance of the exact population of the several parts of the country is now sensibly felt. It is nearly eight years since the census was taken; and the growth of the population of the whole country has undergone considerable fluctuations during this important period. Particular towns are necessarily exposed to greater fluctuations than the whole kingdom; as they are peopled partly by indigenous inhabitants and partly by immigrants from the country. If we assume that the town population, which in the aggregate amounted to 8,247,017 in 1851, increased at the rate which prevailed in the previous ten years (1841-51) up to 1858, the numbers would amount in the middle of that year to 9,471,204; and the mortality in the year would be at the rate of 25 in 1000. This may be taken as an under estimate of the mortality of the towns; as 21 in 1000 is rather an over estimate of the mortality in the country.

The population of England and Wales in the middle of 1858 probably did not exceed 19,576,950*; and, at the rates of comparatively healthy districts, the deaths in the year should not have exceeded 349,398; the actual deaths amounted to 450,018, and the excess of 100,620 deaths is due chiefly to the fatal neglect of the sanitary arrangements which are required in every district, and are indispensable in densely peopled cities. These 100,620 deaths may be called unnatural deaths, of which about 69,730 happened in the large town districts, and 30,890 in the rest of the kingdom. This is a sad reckoning; but it is an under-statement of the facts.†

The Lords of Her Majesty's Privy Council having under the Public Health Act the power to institute local sanitary inquiries, the registrars of every sub-district in the kingdom have been requested to give immediate information of any reigning epidemic, and to insert in their notes numerical statements of the deaths from certain leading zymotic diseases. After some revision their returns have been printed in the form of notes (pp. 30-48), suggesting inquiries which will no doubt be zealously prosecuted by Mr. Simon, the able health officer of the Board.

It will be observed that different diseases have prevailed in different localities; each group of population all over the country suffering more or less from its local disease, or enjoying unusual exemption. The excess of the mortality is most frequently referred to scarlatina and to the epidemic of diphtheria, which began on the southern coast and has during the year spread over the North Midland and the Northern Counties. Some districts exhibit no increase of mortality. Thus in North Devon among 105,692 people only 465 deaths took place in three months, and the mortality was at the annual rate of only 18 in 1000. In the sixty-three healthy districts the mortality of the quarter was at the rate of 19 in 1000 annually. In Glendale 39 in 14,348 people died in the quarter, and the mortality was generally low in the surrounding districts of Northumberland. The Morpeth district is an exception; or rather the Bedlington sub-district of Morpeth, for there 96 of the deaths occurred, leaving only 40 as the deaths in Morpeth itself. In Bedlington 15 persons died of fever; diarrhoea, bronchitis, and diphtheria prevailed. The mortality in Bedlington progressively rose from 23 in 1000 in the year 1856 to 27 in 1000 in 1857, and to 35 in 1000 in the year 1858, according to the calculation of Mr. Woodman, the clerk to the Board of Health. "From this it appears," he adds, "that at Bedlington the death-rate is steadily increasing year

* This result is obtained by assuming that the population has increased in the towns and in the country at the same rates since 1851 as in the ten previous years (1841-51); by taking the excess of births registered over deaths in the whole country, the population is 19,523,000.

† If the ages and the mortality of the population of England had been the same as the ages and the mortality of the 63 healthy districts, the annual death-rate of England would not exceed 17.85 in 1000 living. By applying this rate to the population of town and country the above numbers are obtained.

“ by year ; that the poison from filth and cesspools, and the want of water, are “ increasing, and producing their certain results.” Bedlington neglects sanitary measures, and sits tranquilly over its cesspools, which send up disease among the inhabitants. Morpeth has main sewers as well as a water supply ; fever has nearly disappeared, and cholera has been averted, although yet much remains to be done to complete the sanitary defences of the place.

The mortality in many of the towns has been excessively high : and this has been notably the case in Brighton, Reading, Windsor, Great Yarmouth, Melksham ; Exeter, Plymouth, and the other towns of South Devon ; Bath and the towns of Somersetshire ; Bristol, Gloucester, and Cheltenham ; Newcastle-under-Lyne and the Pottery Districts ; Wolverhampton and Dudley ; Birmingham and Stratford-on-Avon ; Leicester, Lincoln, Nottingham, and Derby ; Liverpool, Manchester, and the manufacturing towns of Lancashire ; Keighley, Halifax, Bradford, and Leeds. In Sheffield 1021 persons died in 92 days, out of a population amounting in 1851 to 103,626. Certain sanitary works have been carried out in Lancaster, and only 178 persons died there in the same time, out of a population of 34,660. Multiplying the deaths and the population of Lancaster by *three*, it is seen that the deaths were in the proportion of 534 to 103,980, while in Sheffield the deaths were 1021 to 103,626 ! Can nothing be done to render the sanitary arrangements of Sheffield at least as satisfactory as those of Lancaster ?

Upon examining all the facts, it is evident that the excessive mortality of the year 1858 may be traced, partly to the pressure in the early part of the year on the poor in the manufacturing districts, partly to the extreme cold of November, partly to defective supplies of pure water, and partly to the prevalence of the epidemic of diphtheria.

We must not shut our eyes to the fact, that one great nuisance perpetually increases as the population increases, and that no effectual provision has yet been made for getting rid of it from human dwellings. It is referred to several times in the notes of the registrars in towns which have been most heavily afflicted. To take one instance :—the deaths (386) exceeded the births (375) in St. Peter's, Brighton ; the registrar enumerates the prevailing zymotic diseases, and then observes :—

“ The inhabitants of this sub-district are chiefly artizans, mechanics, and the labouring poor. In many of their dwellings a very insufficient supply of water has been available to them, owing to the dryness of the weather in the first portion of the quarter, the water in the wells in use having been very low. There is no effectual drainage attached to their dwellings, and the cesspool system is in general use.”

Our towns have not had the advantage generally of being led by such enlightened and energetic men as the late Dean of Ely, and have consequently, notwithstanding some efforts, left the greatest nuisance of all still subsisting. Yet the removal of this nuisance is the one thing needful ; in sanitary reform it is “ the root of the matter.”

Liebig, the great agricultural chemist of Europe, has recently reminded us of English guano as a substitute for foreign supplies. “ I am firmly of opinion,” he says, “ that if England wishes to remain an agricultural country she must use “ as manure the nightsoil and similar residues produced in large cities.” Now England is a great agricultural country, and she will remain a great agricultural country to the end of time. And before the supplies of Peruvian guano fail in our imports, she must bring the article which may be called English guano into the field. It is poison alike in the cesspool of large cities and in the middens of cottages in the country ; it is manure in the soil. The land requires it ; the houses must get rid of it.

Byron, to justify his plain speaking, quotes a sentence from Voltaire : “ *La pudeur s'est enfuite des cœurs, et s'est réfugiée sur les lèvres.*” Without pleading guilty to this charge, it must be admitted that while the cesspool nuisance has been increasing every year in all the cities of Europe, from Petersburg to Paris, from Vienna and Venice to London and Liverpool, it suggests ideas so disagreeable that it is rarely mentioned. The time has, however, come when the thing must be met. It cannot be evaded. Scientific research has traced the propagation of typhoid fever to this source. It is the great nidus of the cholera poison. The very aggravated

disease, diphtheria, which infests this country, first assumed the epidemic form in France. And every traveller knows, that if the perfumery of France is exquisite ; if her *cuisine* is the despair of English gourmands ; if her arts are admirable ; if her society is charming ; her *cabinets* are everywhere detestable. They give an Englishman literally *mal à la gorge*. And French guano was apparently the slime on which the diphtheria,—whether it is a new or old form of disease,—whether it is a parasitic or a simple zymotic malady,—assumed its epidemic character. In England it has unhappily found a congenial home ; and all over the continent it spreads under still more favourable conditions. In Munich, whence Liebig warns England of her danger, adorned as the Bavarian capital is with a Glyptothek, a Pinacothek, and other wonders of Bavarian art, delicate ladies are persecuted in the hotels by ammoniacal emanations.

Science has demonstrated that fermenting human excrement is a poison in and near human dwellings ; and chemistry has shown that the same elements in other states become grasses, grain, fruits, and flowers, by the natural magic of the earth. Why then, it may be asked, have none of the enlightened despotisms of the continent emptied the cesspools of their subjects by absolute decrees ? Why have they not conferred this boon on the native agriculture which they so assiduously protect ? Neither want of knowledge, nor probably of good-will, has paralyzed administrative action, but rather want of power. Despotism is only almighty in its powers of doing mischief. It can set the world in flames ; it can shed torrents of blood ; but it cannot regenerate nations. It cannot purify the people it has subjugated. Otherwise a few lines in the first Code Napoleon might have abolished French cesspools, and have directed the French guano to be deposited every day in the French soil, and by such a law have conferred more benefit on France than she derives from nine-tenths of the articles in that famous Digest.

Ancient legislation did not shrink from plainly dealing with the most indelicate matters where human life was at stake, and where the physical purity of mankind was concerned. Thus in the laws which we have been taught were delivered by Divine inspiration the following passage is found :—“Thou shalt have a place also
“ without the camp, whither thou shalt go forth abroad : And thou shalt have
“ a paddle upon thy weapon ; and it shall be, *cumque sederis* thou shalt dig
“ therewith, and shalt turn back and cover that which cometh from thee : *For*
“ *the Lord thy God walketh in the midst of thy camp*, to deliver thee, and to
“ give up thine enemies before thee ; *therefore shall thy camp be holy : that*
“ *He see no unclean thing in thee, and turn away from thee.*” (Deuteronomy, xxiii. 12th, 13th, 14th).

This is, *mutatis mutandis*, the true sanitary theory ; all these matters, all dung, and all dirt, must be immediately placed under the soil, which is the best of all disinfectants ; and modern invention can readily find the mechanism for effecting the purpose, in ways involving less than the Mosaic labour, and quite inoffensive to the refined sensibility of modern civilization. The air of our cities will then be sweet ; our rivers will flow unpolluted ; the foliage of trees and delicate odours of flowers will caress the senses in the country, in the cottage, and in the mansion.

In England, one of the free countries of the world, this might perhaps be immediately effected, with the consent of the people, expressed by their representatives, in an enactment somewhat to this effect : “Seeing that English guano is a fertilizing
“ manure in the soil, and is a loathsome, shameful, and poisonous nuisance in or
“ near dwelling houses, be it enacted, that the retention of any such manure in cess-
“ pools, in privies, in middens, or in any other form whatsoever, in or near a
“ dwelling house, shall render the owner or occupier of the place in which it is
“ found liable to a fine not exceeding shillings a day.” If the municipal and parish authorities have the necessary powers to facilitate the working of the measure intrusted to the police for execution, it would speedily effect a revolution in the sanitary condition of England.

“For the Lord thy God walketh in the midst of thy camp,”—thy cities and thy fields,—“therefore shall thy camp be holy : that He see no unclean thing in thee, and turn away from thee ;” nor behold again a hundred thousand of thy children perish in any year to come for national violations of His laws.

VACCINATION RETURNS.

The Vaccination Extension Act of 1853 (16 & 17 Vict. cap. 100.) contained the following provision :—

“ Sect. 4. Upon and immediately after the successful Vaccination of any Child
 “ the Medical Officer or Practitioner who shall have performed the Operation
 “ shall deliver to the Father or Mother of the said Child, or to the Person who
 “ shall have the Care, Nurture, or Custody of the said Child, a Certificate under
 “ his Hand, according to the Form of Schedule herein-after inserted marked (A.),
 “ that the said Child has been successfully vaccinated, and shall also transmit a
 “ Duplicate of the said Certificate to the Registrar of Births and Deaths of the
 “ Sub-district in which the Operation was performed ; and such Certificate shall,
 “ without further Proof, be admissible as Evidence of the successful Vaccination
 “ of such Child in any Information or Complaint which shall be brought against
 “ the Father or Mother of the said Child, or against the Person who shall have
 “ had the Care, Nurture, or Custody of such Child, as aforesaid, for Noncompliance
 “ with the Provisions of this Act.”

It appeared desirable to ascertain how this provision had worked ; and accordingly each registrar was requested to fill up the annexed return :—

RETURN OF VACCINATION CERTIFICATES RECEIVED IN 1858.

Total Number of <i>Duplicate Certificates</i> of successful Vaccination received by me from Medical Officers or Practitioners during the Year ended 31st De- cember 1858.	}	Total Number.

N.B.—Be careful to state only the number of **DUPLICATE CERTIFICATES** received by you, without regard to the number of “ Entries” contained in your Register Book of successful Vaccinations.

The above is a true Return.

(Signed) _____ Registrar.

From these returns the Table (pp. 26–29) has been compiled.

The registrars received 376,798 vaccination certificates, although they registered the births of 655,627 children.

Persons vaccinated are not always children ; and the children vaccinated are often born in previous years. But this consideration may probably be left out of account ; and it may hence be inferred that the registrars will not receive more than 376,798 certificates relative to the vaccination of these 655,627 children.

A certain number of children die before they can be vaccinated. If these are represented by the deaths in the first three months of life, they will not exceed 8 per cent., or about 52,400. There will remain 226,429 certificates unaccounted for. A certain proportion of the children must in spite of the law have remained unvaccinated ; and in reference to another portion actually vaccinated, the medical practitioners must have neglected to forward the duplicate certificates to the registrars. That the latter number is large is evident from the fact, that, according to the returns made to the Poor Law Board, 455,004 children in the year that ended on September 29th, 1858, were vaccinated successfully by the public vaccinators alone. In other words, their vaccination was paid for by the public. Of the number vaccinated successfully in the year 1858, by the public vaccinators, they must have neglected to send the duplicate certificates to the registrars in at least 78,000 instances ; but as private practitioners sent a certain number of the 376,798 certificates, the public vaccinators must to that further extent have neglected to make the required returns.

The Act appears to work very unsatisfactorily in all its registration clauses, which evidently require revision.

The Registration Counties consist of groups of entire Registration Districts ; which Districts are, in general, identical with the Poor Law Unions. As the principle adopted has been to place a District or Union which extends into more than one County with the County in which the principal town or the greater part of the population is located, the limits of the Registration Counties differ more or less from the boundaries of the Counties proper.

* The *Districts* are collections of contiguous Parishes or Places, generally identical with the Poor Law Unions of the same names; they are 630 in number, and are here arranged topographically under the Registration Counties.

† Slight changes were made in these Districts in March and November 1858.

‡ The Hamlet of Mile End Old Town, which formed part of the Stepney District prior to 1st October 1857, is now a distinct and separate District. For the sake of comparison the births and deaths in Mile End Old Town prior to 30th September 1857 are stated for the present limits; for the marriages, the numbers of which have not been separately ascertained, a joint return is made.

II.—SOUTH EASTERN COUNTIES—continued.

* The Gower Union and District was formed on 19th July 1853 by the severance of parishes from the district of Swansea.

† A change was made in these districts in November 1857.

‡ The number of districts is increased to 630 by the formation of the following new districts: Mile End Old Town (24 b), Dulverton (313 b), Whitechurch, Salop (363 b), Great Ouseburn (492 a), Wetherby (492 c), Hemsworth (504 b), and Gower (585 b).

Remarks on the weather, during the Quarter ending December 31st, 1858. By JAMES GLAISHER, ESQ., F.R.S., &c., Sec. of the British Meteorological Society.

October till the 4th was warm, being $3\frac{1}{4}^{\circ}$ above the average; it was then cold till the 12th, being $2\frac{3}{4}^{\circ}$ deficient from the average; from the 13th to the 28th it was warm, being $3\frac{1}{4}^{\circ}$ in excess; and then till the end of the month was again cold; the mean daily deficiency being $5\frac{1}{2}^{\circ}$. The mean high day temperature was 60° , exceeding the average by $1\frac{3}{4}^{\circ}$; and the mean low night was 44° , exceeding the average by $\frac{1}{4}^{\circ}$ only. The mean temperature of the month was $50^{\circ}\cdot8$ being $1\frac{1}{2}^{\circ}$ above the average.

November was very cold till the 24th, being 6° below the average, and then became warm for the remainder of the month, the average excess being $5\frac{3}{4}^{\circ}$. The mean high day temperature was 46° , being $3\frac{1}{2}^{\circ}$ below the average; and the mean low night was $33\frac{1}{2}^{\circ}$, being $4\frac{1}{2}^{\circ}$ deficient from the average. The mean temperature of the month was $39^{\circ}\cdot6$, being $4\frac{1}{4}^{\circ}$ below the average of the last 17 years. The mean temperature of this month has been lower on 12 occasions only during the last 87 years. On the 24th of November the lowest temperature recorded at many stations was below 20° , and at Royston in Hertfordshire the temperature decreased to the point 11° . The mean temperature of the 23d and 24th at Greenwich was lower than that of any two consecutive days in November during the last 45 years.

December was warm till the 5th, being $3\frac{3}{4}^{\circ}$ in excess; it was then cold till the 17th, averaging $3\frac{1}{2}^{\circ}$ in defect, and then for the remainder of the month it was warm, the average excess being $5\frac{1}{4}^{\circ}$. The mean high day temperature was 45° , differing but little from the average; and the low night was $36\frac{1}{2}^{\circ}$, exceeding the average by $\frac{3}{4}^{\circ}$. The mean temperature for the month was $\frac{1}{2}^{\circ}$ above the average of the previous 17 years.

The mean temperature of November was from 10° to 11° lower than that of October in the south and middle of England, but this value decreased to 7° at stations in the North of England. The temperature from November to December increased about 1° at stations South of 52° lat., and was of nearly the same value at stations more northwards.

The mean temperature of the dew-point was above its average in October and December, and below in November. The mean degree of humidity exceeded its average in December, but was deficient in October and November.

The fall of rain was deficient in each month, and the total deficiency for the quarter amounted to 4.5 inches. The annual fall for the last four years has shown a yearly decrease; in 1855 the amount was 23.5 inches; in 1856, 21.5 inches; in 1857, 21.4 inches; and in 1858, 17.2 inches; and the latter amount is the lowest since 1840, when it was 16.4 inches.

The mean pressure of the atmosphere was considerably above the average in October, and somewhat below in November and December.

The mean temperature of the air at Greenwich for the quarter ending November, constituting the three autumnal months, was $50^{\circ}\cdot2$, being $0^{\circ}\cdot9$ above the average of 87 years.

NOTE.—In reading this table it will be borne in mind that the sign (−) minus signifies below the average, and that the sign (+) plus signifies above the average.

Thunderstorms occurred or thunder was heard and lightning seen on the 5th of October at St. Thomas's Hospital, Whitehall, Camden Town, Cardington, and Bedford. On the 18th of December at Clifton, Gloucester, Hereford, Belvoir, Nottingham, and Hawarden; on the 19th and 21st at Guernsey; on the 22nd at Clifton, Rose Hill, Bicester, and Gloucester; and on the 26th at Hartwell Rectory.

Thunder was heard but lightning was not seen on October the 5th at Greenwich; and on the 11th at Scarborough. On the 28th of November at Rose Hill. On December the 19th at Clifton; on the 22nd at Hartwell House and Hartwell Rectory; and on the 26th at Camden Town and Great Berkhamstead.

Hail fell on the 5th of October at Aldershot, Gloucester, Cardington, Bedford, and Chorlton-upon-Medlock; on the 7th at Allenheads; on the 8th at Hawarden, Manchester, Isle of Man, and Allenheads; on the 10th at the Isle of Man; on the 11th at Helston; and on the 29th at North Shields and Bywell. On November the 5th at North Shields; on the 6th and 15th at North Shields and Bywell; on the 16th at Teignmouth; on the 19th at Stonyhurst; and on the 30th at Guernsey and Barnstaple. On the 4th of December at Helston; on the 5th at Guernsey; on the 16th at the Isle of Man; on the 18th at Gloucester, Nottingham, and the Isle of Man; on the 19th at Little Bridy, the Isle of Man, and Silloth; on the 20th at Guernsey; on the 22nd at Barnstaple, Clifton, Bicester, and Lampeter; on the 23d at the Isle of Man; on the 24th at Fairlight and Clifton; on the 26th at Helston, Fairlight, Little Bridy, Clifton, Rose Hill, Bicester, and Manchester; on the 27th at Lampeter; on the 28th at Lampeter, Hawarden, Manchester, and Stonyhurst; on the 29th at Lampeter, Hawarden, and the Isle of Man; and on the 30th at Aspley.

Lightning was seen but thunder was not heard on the 8th of October at Nottingham; on the 9th at Cardington; and on the 11th at Lewisham, Greenwich, and Cardington. On the 13th of November at Aldershot; on the 28th at Helston, Truro, Exeter, and Little Bridy; on the 29th at Guernsey and Berkhamstead; and on the 30th at Guernsey, Osborne, Fairlight, and Aspley. On the 18th of December at Exeter, Barnstaple, Bicester, Bedford, and Grantham; on the 19th at Helston and Little Bridy; on the 21st at Helston; on the 23rd at Rose Hill, Berkhamstead, Hartwell House, Hartwell Rectory, Nottingham, and Hawarden; on the 24th at Fairlight, Lewisham, Battersea, Hartwell House, and Hartwell Rectory; on the 26th at Lewisham and Greenwich; and on the 27th at Rose Hill.

Fog was prevalent in October, on the 10th in the south of England; in the Midland counties on the 7th, 9th, 11th, 29th, and 30th; north of latitude $51\frac{1}{2}^{\circ}$ on the 17th, 20th, 23d, 25th, and 26th; in the north of England on the 1st, 2d, and 3d; and throughout the country generally on the 14th, 15th, 16th, 21st, 22d, 24th, 27th, 28th, and 31st. In November, in the south of England, on the 27th and 29th; in the Midland counties on the 13th, 16th, 17th, 28th, and 30th; in places north of latitude $51\frac{1}{2}^{\circ}$, on the 1st, 2d, 3d, 5th, 8th, 9th, 12th, 25th, and 26th; and generally throughout the country on the 4th, 10th, 11th, 18th, 19th, 20th, 21st, 22d, 23d, and 24th. In December, in the south of England, on the 21st; in the Midland counties on the 5th, 11th, and 17th; north of latitude $51\frac{1}{2}^{\circ}$ on the 7th, 9th, and 10th; on the west coast on the 27th, 28th, and 29th; and generally throughout the country on the 6th, 8th, 13th, 14th, 15th, 30th, and 31st.

Snow fell on the 8th of October on Skiddaw and Saddleback, and at Allenheads; on the 10th at Guernsey; on the 18th at Hawarden and Allenheads; and on the 29th at Allenheads. On the 6th of November at Allenheads; on the 7th at Royston and Allenheads; on the 14th at Fairlight; on the 15th, 16th, and 18th at Allenheads; and on the 25th at Grantham, North Shields, and Bywell. On the 8th of December at Fairlight; on the 16th at Nottingham, York, and North Shields; on the 17th at Chorlton-upon-Medlock and Leeds; and on the 23d and 24th at Aldershot.

Solar Halos were seen on the 1st October at Little Bridy and the Isle of Man; on the 2d at Little Bridy; on the 5th at Grantham; on the 9th at Little Bridy and Berkhamstead; on the 11th at Aldershot; and on the 12th at Clifton, Berkhamstead, Nottingham, and Hawarden. On the 8th of November at Lampeter; on the 13th at Berkhamstead and Hartwell Rectory; on the 14th at Berkhamstead; on the 15th at Little Bridy and Nottingham; on the 16th at Aldershot, Grantham, and Nottingham; on the 17th at Clifton, Berkhamstead, and Hartwell Rectory; on the 20th at Little Bridy and Berkhamstead; on the 21st at Berkhamstead; and on the 27th and 30th at Little Bridy. On the 4th and 23d of December at Little Bridy; on the 25th at North Shields; and on the 27th and 28th at Little Bridy.

Lunar Halos were seen on the 5th of October at Truro; on the 20th at Camden Town; on the 23d at Bywell; on the 24th at Wakefield and North Shields; on the 25th at Bywell; on the 27th at Little Bridy; and on the 28th at Little Bridy and Aldershot. On the 10th of November at Aldershot; on the 12th at Aldershot, Berkhamstead, and the Isle of Man; on the 13th at Berkhamstead, Hawarden, and the Isle of Man; on the 14th at Aldershot; on the 16th at Hartwell Rectory, Grantham, Belvoir Castle, Nottingham, Hawarden, Liverpool, and the Isle of Man; on the 17th at Clifton, Berkhamstead, Cardington, Hereford, Lampeter, and Bywell; on the 18th at Stonyhurst; on the 20th and 21st at North Shields; on the 22d at Bywell; on the 23d at Belvoir Castle and Silloth; on the 24th at Bywell; and on the 27th and 30th at Truro. On the 13th of December at Stonyhurst and North Shields; on the 16th at Helston and Silloth; on the 19th at Fairlight; on the 20th at Little Bridy and Wakefield; on the 21st at Little Bridy and Liverpool; and on the 22d at Fairlight, Clifton, Berkhamstead, and Cardington; on the 23d at Little Bridy; on the 25th at Little Bridy and Berkhamstead; and on the 27th and 28th at Little Bridy.

Aurora was seen on the 2d of October at Hawarden; on the 3d at Clifton; on the 8th at Aldershot, Clifton, Hereford, Nottingham, and Hawarden; and on the 31st Guernsey. On the 8th at Nottingham; on the 9th at Clifton; and on the 30th at Rose Hill. On the 1st December at Clifton; on the 4th at Guernsey, Teignmouth, Exeter, Little Bridy, Aldershot, Clifton, Rose Hill, Hartwell House, Aspley, Cardington, Lampeter, Grantham, Nottingham, Hawarden, Liverpool, York, North Shields, and Silloth; on the 5th at Little Bridy, Clifton, and Nottingham; on the 13th at North Shields; on the 14th and 26th at Silloth; and on the 29th at Rose Hill.

* The Registration Counties consist of groups of entire Registration Districts; which Districts are, in general, identical with the Poor Law Unions. As the principle adopted has been to place a District or Union which extends into more than one County with the County in which either the principal town or the greater part of the population is located, the limits of the Registration Counties differ more or less from the boundaries of the Counties proper.

REGISTRARS' NOTES.

In compliance with the following instruction, remarks have in many instances been appended by the Registrars to their Returns; from which the following Notes have been selected. The Registrars alone must be considered responsible for the opinions which they express.

INSTRUCTION TO REGISTRARS:—

"If the Deaths registered during the quarter have been above or below the average, mention whether the state of sanitary arrangements, movement of the population, the weather, prevalence or decline of Small-pox, Measles, Scarlatina, Hooping-cough, Typhus, Cholera, Bronchitis, or other disease,—more or less attention to Vaccination and other measures—does, in your opinion, wholly or partially account for the fact. Also with regard to increase or decrease of Births, you may mention any circumstance to which it may be attributed. By 'Average' must be understood *not* the average of numbers in other quarters of the year, but the average of *corresponding* quarters in four or five previous years."

The figures prefixed refer to the numbers of the District and Sub-District. The name of the District is in SMALL CAPITALS, that of the Sub-district in *italics*.

II. SOUTH-EASTERN COUNTIES.

1. SURREY (*Extra-metropolitan*).

38; 3. CHERTSEY; *Chobham*.—Births 39; Deaths 31. Deaths one third above the average. 9 from diphtheria, which has been very prevalent in my district.

39; 5. GUILDFORD; *Godalming*.—Births 49; Deaths 70. The greatly increased number of deaths is owing to the prevalence of scarlatina, which has carried off no less than 27 in almost all parts of my district.

48; 1. RICHMOND; *Richmond*.—Births 89; Deaths 88. Deaths above the average. 13 from scarlatina, all of children not exceeding 6 years of age. 3 from typhus (adults) and 11 from bronchitis.

2. KENT (*Extra-metropolitan*).

50; 1. DARTFORD; *Beasley*.—Births 119; Deaths 64. Deaths above the average. 33 are deaths of children under 5 years of age. Scarlatina has been very prevalent, one fourth of the whole number of deaths being the result of scarlatina, or scarlatina and malignant sore throat.

50; 2. DARTFORD; *Dartford*.—Births 106; Deaths 69. Deaths above the average. From typhus 3, scarlatina 6, small-pox 4, diarrhoea 3.

56; 2. SEVENOAKS; *Sevenoaks*.—Births 66; Deaths 61. The deaths from scarlatina are 9; 3 cases of diarrhoea and 1 of typhus.

57; 3. TONBRIDGE; *Brenchley*.—Births 44; Deaths 29. Diphtheria has prevailed exclusively in two parishes of my sub-district, and scarlatina also; 7 deaths are recorded from the former disease, 5 from the latter. Total mortality above the average.

58; 1. MAIDSTONE; *Yalding*.—Births 39; Deaths 23. Diphtheria prevails among children.

58; 4. MAIDSTONE; *West*.—Births 86; Deaths 88. The deaths are 19 above the average; there have been 4 fatal cases of diphtheria, 5 of small-pox, and 6 of measles.

58; 5. MAIDSTONE; *East*.—Births 106; Deaths 94. The deaths are 31 above the average, arising chiefly from the prevalence of measles, scarlatina, and diphtheria. I have registered from measles 8, scarlatina 8, typhus 1, continued fever 1, diphtheria 4, and small-pox 1. Measles, scarlatina, and diphtheria are still prevalent.

60; 1. CRANBROOK; *Cranbrook*.—Births 62; Deaths 41. 12 cases of scarlatina, and 6 of hooping-cough. We have a case of small-pox in Cranbrook, which

may prove fatal, in a tramp lodging at a beer shop, to which that class of people resort.

61; 1. TENTERDEN; *Rolvenden*.—Births 37; Deaths 36. Deaths above the average, in consequence of there having been 10 fatal cases of scarlatina. Vaccination is very much neglected by parents of children.

61; 2. TENTERDEN; *Tenterden*.—Births 48; Deaths 55. Deaths above the average, caused by scarlatina.

62; 2. WEST ASHFORD; *Ashford*.—Births 95; Deaths 59. Deaths considerably above the average (41). Measles, whooping-cough, croup, pneumonia, bronchitis, and diphtheria have been very prevalent, and to these causes 34 deaths are ascribed by the medical men.

64; 2. BRIDGE; *Barham*.—Births 52; Deaths 28. Measles has been very prevalent in the parish of Adisham during the past quarter; two deaths of children occurred in one family.

67; 2. FAVERSHAM; *Faversham*.—Births 85; Deaths 49. Diphtheria and bronchitis have been prevalent, and many deaths have been registered from those diseases.

70; 3. THANET; *Ramsgate*.—Births 130; Deaths 96. Deaths rather above the average, which I can only attribute to the fact of 16 persons, aged 70 years of age and upwards, having died.

71; 4. EASTRY; *Deal*.—Births 83; Deaths 70. Deaths a little above the average; scarlatina and diphtheria prevalent. I have registered 11 deaths from scarlatina, 4 from sore throat, and 5 from diphtheria.

3. SUSSEX.

75; 2; RYE; *Beckley*.—Births 45; Deaths 25. During the month of December, in one family, all the children, 5 in number, died from diphtheria.

76; 3. HASTINGS; *St Mary-in-the-Castle*.—Births 69; Deaths 68. The deaths of the residents during the quarter amounted to only 28; the remainder were visitors, and out of the number (40) 20 died from consumption. 2 cases of diphtheria.

84; 2. LEWES; *Chailey*.—Births 34; Deaths 36. Deaths above the average, in consequence of an epidemic disease prevailing in the sub-district; viz. diphtheria.

85; 2. BRIGHTON; *St. Peter*.—Births 375; Deaths 386. The deaths exceed the average for the corresponding quarters of the last five years by 144. The following are the numbers from epidemic diseases during the past quarter: typhus 12; scarlatina 74; fevers not specified, 16; diphtheria, 6; small-pox, 11; measles 9; total, 128. None of the persons who

died from small-pox had been vaccinated until they had come in contact with the disease. The inhabitants of this sub-district are chiefly artizans, mechanics, and the labouring poor. In many of their dwellings a very insufficient supply of water has been available to them, owing to the dryness of the weather in the first portion of the quarter, the water in the wells in use having been very low. There is no effectual drainage attached to their dwellings, and the cesspool system is in general use. The health of this sub-district within the last ten days has shown a great improvement. The showers which fell within the last three weeks have thoroughly flushed the common sewers.

85; 3. BRIGHTON; *The Palace*.—Births 123; Deaths 153. The largest number of deaths in any quarter since 1841; 30 deaths certified from scarlatina, 3 from diphtheria, and 6 from fever.

87; 2. HORSHAM; *North Horsham*.—Births 74; Deaths 52. Deaths above the average; from diphtheria 4, typhoid fever 2, fever 1, scarlatina 2, diarrhoea 2, bronchitis 4.

88; 1. PETWORTH; *Billingshurst*.—Births 24; Deaths 20. Births below and deaths above the average; 4 deaths from diphtheria.

89; 1. THAKEHAM; *Pulborough*.—Births 31; Deaths 22. Deaths above the average; the excess may be attributed to the prevalence of typhus, scarlatina maligna, and typhoid affections, "variorum generum," among which a large proportion of diphtheria, 6 out of 22 deaths having resulted from that disease.

90; 1. WORTHING; *Broadwater*.—Births 55; Deaths 44. Births 15 per cent. above the average; deaths the same. There has been no epidemic disease within my sub-district during this quarter but diphtheria, which has prevailed at West Tarring, where 3 children died of that disease.

4. HAMPSHIRE.

96; 1. PORTSEA ISLAND; *Kingston*.—Births 178; Deaths 179. This number of deaths exceeds that of the corresponding quarter of last year by 20; 13 were from small-pox, including 2 adults; 8 from scarlatina; 9 from typhus and typhoid fever; 3 from diphtheria. These diseases have prevailed during the quarter; scarlatina is now epidemic.

96; 4. PORTSEA ISLAND; *Landport*.—Births 339; Deaths 243. Small-pox has prevailed in my district during the quarter; but the high mortality observable in the return was consequent on the low temperature in the latter part of November.

97; 1. ALVERSTOKE; *Alverstone*.—Births 162; Deaths 133. 28 of the deaths were from scarlatina, which prevailed principally during the months of October and November, since which time it has somewhat subsided.

98; 2. FAREHAM; *Titchfield*.—Births 50; Deaths 30. 8 deaths above the average, attributable to the deaths of 13 young children from scarlatina and diphtheria.

99; 2. ISLE OF WIGHT; *Newport*.—Births 90; Deaths 89. Deaths 17 above the average. Measles and whooping-cough have been prevalent, but the deaths therefrom have not been numerous. Phthisis has carried off 12, and bronchitis 6.

101; 1. CHRISTCHURCH; *Christchurch*.—Births 67; Deaths 51. The deaths, though not much above the average, have been increased by diphtheria and inflammation of the throat and chest; 16 deaths of children are certified from these diseases.

105; 1. SOUTHAMPTON; *Southampton*.—Births 360; Deaths 289. The decrease of births I consider to be caused by the fluctuating character of the population of this town. The shipping interest during the past year has given employment to a much smaller number of resident hands than in some years, so that a large number of families have left the town. The deaths have also decreased from the same cause, as well as from the year having been in general a more healthy one, till the last two months, when the deaths increased very considerably, especially in November, arising, in my opinion, principally from the severity of the weather. Small-pox has also been prevalent, and has caused 11 deaths; scarlatina, 16; whooping cough and measles, 19; consumption and other diseases of the lungs, 81.

109; 3. WINCHESTER; *Winchester*.—Births 95; Deaths 100. Deaths rather above the average of the last two years at this season; nearly a third are of persons aged between 63 and 88; the deaths from pulmonary diseases make fully another third. Some cases of gastric or low continued and perhaps relapsing fever have occurred during the last two months, and 8 deaths are recorded therefrom. Measles has also prevailed; 40 cases in one school recovered, and only 1 fatal case occurred in the city.

110; 3. DROXFORD; *Hambledon*.—Births 34; Deaths 32. Deaths are above the average, attributable to the prevalence of diphtheria, 9 deaths having been registered from that disease in the parish of Droxford.

117; 1. WHITCHURCH; *Whitchurch*.—Births 40; Deaths 36. Deaths slightly above the average. Diphtheria destroyed 4 persons, and inflammation of chest and bowels has proved fatal to 7 children and young persons.

5. BERKSHIRE.

123; 5. ABINGDON; *Sutton Courtney*.—Births 20; Deaths 15. Scarlatina has been very prevalent in the neighbourhood among children, and proved fatal in 6 cases in my sub-district.

124; 3. WANTAGE; *Hendred*.—Births 44; Deaths 28. The deaths in the parish of East Hendred are above the average, owing to scarlatina having been very prevalent there.

125; 2. WALLINGFORD; *Wallingford*.—Births 68; Deaths 34. In the return of deaths 3 are reported from diphtheria.

127; 2. READING; *St. Lawrence*.—Births 39; Deaths 28. Although the deaths in my district have not exceeded the usual number, I deem it necessary to mention the following facts as tending to prove the value of vaccination. In a family with 8 children, 4 of whom had been vaccinated and 4 not, on small-pox breaking out in the court where they resided the doctor was sent for, and tried to vaccinate the 4 unvaccinated children, but only one would take the vaccine disease. The remaining 3 died in a shocking state from small-pox, while the 5 that had been successfully vaccinated, although they were in the same house with the dead and dying, never took the infection in the least degree. Diphtheria has been very bad here; 3 deaths from it occurred in one street.

131; 2. WINDSOR; *Windsor*.—Births 94; Deaths 134. Deaths greatly in excess; attributable to scarlatina and typhus. The former prevailed at the latter end of September quarter, and continued to the beginning of November, after which few deaths occurred from that cause. Between the 8th November and 8th December 25 deaths occurred from fever (chiefly typhus) or consequent thereupon, and 3 since.

III. SOUTH MIDLAND COUNTIES.

6. MIDDLESEX (*Extra-metropolitan*).

134; 2. BRENTFORD; *Twickenham*.—Births 50; Deaths 40. Deaths above the average, caused by the prevalence of scarlatina and diphtheria, there having been 9 fatal cases of the former and 2 of the latter disease. The deaths have all occurred amongst the better class of inhabitants.

134; 5. BRENTFORD; *Acton*.—Births 23; Deaths 25. 11 of the deaths are those of children, certified from "measles, diphtheria;" three in one family.

136; 3. BARNET; *Finchley*.—Births 53; Deaths 58. Deaths in excess of the average. The increase may be ascribed to the prevalence of scarlatina, of which, and the attendant diseases, 14 fatal cases have occurred.

137; 2. EDMONTON; *Tottenham*.—Births 113; Deaths 50. The births are in excess of the average, I think from an increase of the population, a number of new houses being let to young people. There have been 2 deaths from small-pox (adults), from measles 5 deaths, and from scarlatina 2.

7. HERTFORDSHIRE.

142; 2. HERTFORD; *Hertford*.—Births 63; Deaths 64. The unusual number of deaths arises from the prevalence of diphtheria in some portions of the district, amongst children. It has, however, greatly abated, and very few deaths now occur from that disease. About 15 deaths have taken place from it altogether.

143; 1. HATFIELD; *Hatfield*.—Births 41; Deaths 23. Typhus has been prevalent in Hatfield, but has now subsided. 5 deaths resulted from it, and 1 from scarlatina.

144; 1. ST. ALBANS; *Harpenden*.—Births 69; Deaths 44. The deaths are 51·7 per cent. in excess of the average of 10 corresponding quarters. From bronchitis 6.

145; 1. WATFORD; *Bushey*.—Births 41; Deaths 32. Scarlatina very prevalent in my sub-district this quarter.

8. BUCKINGHAMSHIRE.

148; 2. AMERSHAM; *Chesham*.—Births 48; Deaths 39. Deaths above the average: diarrhoea 4, bronchitis 4, typhus 2, continued fever 2, small-pox 1.

148; 4. AMERSHAM; *Chalfont*.—Births 21; Deaths 27. From scarlatina 9 deaths; bronchitis 3.

149; 3. ETON; *Burnham*.—Births 33; Deaths 38. Deaths considerably above the average. There have been 4 deaths from typhoid fever, which has prevailed, not in any particular locality, but more or less all over the sub-district.

150; 1. WYCOMBE; *High Wycombe*.—Births 104; Deaths 58.—Deaths above the average; from fever 5, diarrhoea 1, bronchitis 2, scarlatina 2.

150; 3. WYCOMBE; *West Wycombe*.—Births 48; Deaths 52. Deaths above the average: scarlatina 11 cases, diphtheria 3.

9. OXFORDSHIRE.

161; 4. WITNEY; *Burford*.—Births 35; Deaths 31. Scarlatina maligna and rubeola have been very prevalent in this district.

162; 1. CHIPPING NORTON; *Charlbury*. Births 80; Deaths 85. Deaths nearly double the average; this increase is mainly owing to scarlatina having

prevailed during the quarter, causing 40 deaths, chiefly of children.

162; 2. CHIPPING NORTON; *Chipping Norton*.—Births 61; Deaths 60. The deaths from scarlatina in the parishes of Little Tew and Enstone, where this malady has been prevalent, are 7 for the quarter now ended. The number of persons, chiefly children, who died in the quarter ending Michaelmas was about 20. Scarlatina has been prevalent in the hamlets of the parishes of Enstone and Little Tew in my district quite six months, and the medical officers are, I think, at a loss to account for its long continuance. My own opinion is that the disease is engendered by the over-crowded state of the dwellings of the poor, together with bad and in some instances no ventilation.

10. NORTHAMPTONSHIRE.

165; 2. TOWCESTER; *Towcester*.—Births 70; Deaths 57. Deaths above the average, which is to be attributed to the prevalence of scarlatina. About 20 deaths have been registered in which scarlatina is stated to be the primary cause.

169; 2. DAVENTRY; *Daventry*.—Births 64; Deaths 55. Typhoid fever, mentioned in my last quarter's return, has now totally subsided; there have been 4 deaths from the above cause, and 4 from scarlatina during the past quarter, and 2 or 3 from diphtheria.

171; 2. WELLINGBOROUGH; *Higham Ferrers*.—Births 62; Deaths 38. Fever has been prevalent; about 7 deaths in the sub-district, but mostly confined to the village of Puddington.

175; 3. PETERBOROUGH; *Crowland*.—Births 62; Deaths 29. Deaths below the average. Small-pox and typhus have appeared at Crowland and Helpstone; at the latter place typhus is becoming bad. Typhus has been prevalent for some months at Peakirk, where 2 deaths from it occurred this quarter, but not more than the average. Deaths from diphtheria 2, typhus 4.

11. HUNTINGDONSHIRE.

177; 2. ST. IVES; *Somersham*.—Births 34; Deaths 25. 10 cases of small-pox occurred at Somersham, but none proved fatal. Vaccination has been well attended to.

12. BEDFORDSHIRE.

180; 2. BIGGLESWADE; *Biggleswade*.—Births 157; Deaths 98. 33 deaths have occurred from scarlatina, typhus, and diphtheria, and 1 from small-pox.

13. CAMBRIDGESHIRE.

186; 3. CHESTERTON; *Great Shelford*.—Births 55; Deaths 40. One fourth of the deaths in this sub-district has occurred in the parish of Comberton, mostly from fever. Measles has been prevalent, and 7 deaths occurred from it; 1 case of malignant scarlatina. The births exceed those registered in the corresponding quarter of 1857. Coprolites are being dug in many parishes in this district, and many persons have located themselves temporarily to pursue that occupation.

187; 3. CAMBRIDGE; *St. Andrew-the-Great*.—Births 50; Deaths 37. Deaths above the average, attributable to the prevalence of measles (7 deaths), and partly, perhaps, to the severe weather in November. No attention to vaccination whatever, many of the poorer classes refusing to have their children vaccinated under any circumstances.

IV. EASTERN COUNTIES.

14. ESSEX.

196; 2. ONGAR; *Chipping Ongar*. — Births 45; Deaths 30. The births and deaths are about an average. 1 fatal case of typhus, and 1 of diphtheria.

197; 2. ROMFORD; *Ilford*. — Births 30; Deaths 0. Deaths are about an average. 4 fatal cases of typhoid fever and 1 of scarlatina.

198; 1. ORSETT; *Grays*. — Births 70; Deaths 40. The deaths are considerably over the average, owing to the great prevalence of chest affections, which have proved fatal to 20 persons.

198; 2. ORSETT; *Orsett*. — Births 43; Deaths 39. Deaths somewhat above an average. Measles has been most extraordinarily prevalent, and several deaths from bronchitis and pneumonia occurred among the children of the poor, from exposure to cold during convalescence.

201; 4. ROCHFORD; *Great Wakering*. — Births 17; Deaths 18. The deaths are above the average, arising chiefly from the prevalence and severity of ague, followed by fever of a low and typhoid type. Diphtheria has also been prevalent amongst the poor, but not very fatal, 3 deaths only having occurred from it.

202; 1. MALDON; *Southminster*. — Births 32; Deaths 28. Diphtheria and ague have been very prevalent. I have attended upwards of 60 cases of diphtheria, and an immense amount of ague.

202; 4. MALDON; *St. Peter*. — Births 48; Deaths 32. 30 cases of diphtheria.

202; 5. MALDON; *Tollesbury*. — Births 30; Deaths 9. The births are rather above the average. A woman only 19 years old was delivered of three remarkably fine children, all girls, which, with the mother, lived a week; since then two children and the mother are dead.

204; 1. COLCHESTER; *1st Ward*. — Births 90; Deaths 71. Whooping-cough, scarlatina, and measles have been very prevalent, but generally of a mild character.

206; 3. WITHAM; *Coggeshall*. — Births 47; Deaths 34. Diphtheria has prevailed, though of a mild character.

207; 2. HALSTEAD; *Hedingham*. — Births 41; Deaths 61. The mortality has exceeded that of any other quarter since 1837. Measles has been very prevalent throughout the district, and 11 cases proved fatal. There has been great mortality amongst children, 31 having died at the age of 2 years and under.

208; 1. BRAINTREE; *Finchingfield*. — Births 38; Deaths 35. Measles and phthisis have been prevalent; 5 cases were fatal of the former, and 5 of the latter.

208; 3. BRAINTREE; *Braintree*. — Births 41; Deaths 41. The deaths are above the average. Measles has been fatal in 4 cases, diphtheria in 2, and scarlatina in 1.

15. SUFFOLK.

212; 1. SUDBURY; *Bulmer*. — Births 24; Deaths 36. The deaths have been much above the average, owing to diphtheria, scarlatina, and measles prevailing.

214; 3. THINGOE; *Ixworth*. — Births 51; Deaths 38. The deaths are above the average, and include 2 from malignant sore throat.

217; 2. STOW; *Rattlesden*. — Births 44; Deaths 33. The deaths are rather under the usual average. From fever 2, diphtheria 4 (out of 15 cases). Sore throat has been and still is prevalent, but no deaths have occurred, with the exception of the 4 cases of diphtheria.

227; 1. MUTFORD; *Kessingland*. — Births 41; Deaths 29. The deaths, which are above the average, include 7 from scarlatina, 2 from diphtheria, and 1 from typhus. Several cases of fever have occurred, some having come from on board fishing boats.

227; 2. MUTFORD; *Lowestoft*. — Births 118; Deaths 77. Pulmonary affections very prevalent.

16. NORFOLK.

228; 1. YARMOUTH; *Southern*. — Births 123; Deaths 93. The deaths have been above the average. Scarlatina, although gradually disappearing, has been fatal. 20 deaths have been registered from this disease, 6 from diarrhoea and dysentery, 3 from typhus, 2 from whooping-cough, and 9 from bronchitis.

228; 2. YARMOUTH; *Northern*. — Births 148; Deaths 146. Many deaths have occurred from fever and old age.

229; 1. FLEGG; *East*. — Births 30; Deaths 28. Deaths above the average, malignant scarlatina very prevalent. 5 deaths registered in the parish of Caistor; 2 in one family; 2 in the parish of Ormesby St. Margaret, both in one family. A male child, aged 4 days, found dead in bed in the parish of Filby. As no inquest was held, the cause of death is unknown.

229; 2. FLEGG; *West*. — Births 38; Deaths 38. The deaths have much exceeded the average, from the great prevalence of scarlatina in the parish of Martham, the largest parish in the sub-district. 12 deaths have occurred from that disease, all of children of 5 years and under, and all in the parish of Martham.

231; 1. ERPINGHAM; *North Walsham*. — Births 44; Deaths 53. The mortality is above the average. Diphtheria has been very prevalent, and caused 22 deaths.

231; 2. ERPINGHAM; *Cromer*. — Births 60; Deaths 46. The increased mortality is to be attributed to the prevalence of diphtheria, which caused 6 deaths, measles 4, diarrhoea 4.

232; 1. AYLSHAM; *Eynsford*. — Births 70; Deaths 31. Although scarlatina and diphtheria are very prevalent, the deaths are below the average.

232; 2. AYLSHAM; *Buxton*. — Births 61; Deaths 48. The deaths are about an average, notwithstanding there have been 8 cases from diphtheria, and 4 from fever and scarlatina.

233; 2. ST. FAITH'S; *Sprowston*. — Births 42; Deaths 35. Scarlatina and measles have been prevalent.

234; 2. NORWICH; *East Wymer*. — Births 143; Deaths 112. The principal cause of death this quarter has been disease of the respiratory organs.

237; 2. BLOFIELD; *South Walsham*. — Births 46; Deaths 40. The increase of deaths is to be attributed to the prevalence of scarlatina, 11 deaths having occurred from that disease. The inhabitants of this district have suffered much from influenza, sore throat, &c.

238; 2. LODDON; *Loddon*. — Births 32; Deaths 43. The deaths in this district have been considerably above the average, which may be attributed to the prevalence of scarlatina and chest and throat diseases. There have been from scarlatina 4 deaths, typhus 2, diphtheria 2, laryngitis 2, bronchitis 3, pneumonia 2, diarrhoea 2, and measles 1.

239; 3. DEFWADE; *Stratton*. — Births 42; Deaths 45. Deaths above the average, owing to the prevalence of scarlatina, bronchitis, and diphtheria.

246; 1. KING'S LYNN; *North*. — Births 28; Deaths 26. Fever, generally of a typhoid character, has been very prevalent, and 7 deaths have resulted from it. The filthy state of the yards and of the people living in them partly account for this.

V. SOUTH-WESTERN COUNTIES.

17. WILTSHIRE.

251; 2. CRICKLADE; *Cricklade*. — Births 46; Deaths 25. The deaths include 2 from malignant scarlatina, 1 from typhus, and 2 from diphtheria.

253; 3. CHIPPENHAM; *Chippenham*. — Births 71; Deaths 32. Deaths below the average. In the parish of Laycock small-pox has been prevalent, and there were 2 fatal cases.

253; 4. CHIPPENHAM; *Christian Malford*. — Births 29; Deaths 25. Diphtheria is still very prevalent, but owing to prompt attendance is not so fatal.

257; 2. MELKSHAM; *Trowbridge*. — Births 96; Deaths 97. The deaths are above the average, arising from small-pox having been epidemic, and also from whooping-cough. There have been 10 deaths from small-pox. The medical men here state that there have been 500 cases of small-pox within my sub-district; that it has prevailed amongst the unvaccinated chiefly, and that it was introduced into this town by tramps. Almost all the persons who have died were unvaccinated. 11 persons have died from whooping-cough, 3 from measles, and 3 from scarlatina and other fevers. Small-pox seems now to be subsiding.

260; 1. WARMINSTER; *Warminster*. — Births 54; Deaths 51. The deaths are rather above the average.

260; 2. WARMINSTER; *Longbridge Deverill*. — Births 29; Deaths 29. The deaths are above the average, and include 8 from scarlatina and 2 from diphtheria.

265; 1. WILTON; *Wilton*. — Births 33; Deaths 26. Diphtheria and scarlatina have been prevalent; 3 deaths have resulted from the former, and 1 from the latter disease. Still the number of deaths is considerably below the average.

267; 1. MERE; *Mere*. — Births 51; Deaths 54. Diphtheria has been prevalent, there having been 16 fatal cases, which have caused the number of deaths to be above the average.

18. DORSETSHIRE.

272; 2. POOLE; *Poole*. — Births 60; Deaths 50. 3 of the deaths are from diarrhoea, 2 from scarlatina, and 1 from diphtheria.

273; 4. WAREHAM; *Bere Regis*. — Births 32; Deaths 31. The deaths are above the average. Scarlatina has caused 12 deaths.

275; 4. DORCHESTER; *Cerne*. — Births 41; Deaths 45. The deaths are in excess of the average. 18 of the deaths are from scarlatina, 16 of which occurred in the parish of Buckland Newton.

278; 2. BRIDPORT; *Bridport*. — Births 64; Deaths 86. The deaths are above the average, in consequence of the continuance of small-pox; 28 deaths having taken place this quarter, with 3 or 4 of diarrhoea, and 1 or 2 cases of typhoid fever.

19. DEVONSHIRE.

279; 4. AXMINSTER; *Colyton*. — Births 49; Deaths 45. The deaths have been above the average, from the prevalence of whooping-cough, scarlatina, and measles in the parish of Colyton, arising probably from bad drainage.

280; 1. HONITON; *Honiton*. — Births 87; Deaths 86. Though the deaths are about an average, 25 children and a grown person have died of measles.

281; 1. ST. THOMAS; *East Budleigh*. — Births 20; Deaths 30. Deaths above the average, 9 arising from measles, 2 from scarlatina, 3 from remittent fever, and 1 typhus.

281; 2. ST. THOMAS; *Exmouth*. — Births 60; Deaths 48. The deaths are one third above the average, owing to the prevalence of scarlatina, which caused 17 deaths.

281; 5. ST. THOMAS; *Topsham*. — Births 33; Deaths 44. Measles and scarlatina have prevailed very much, and many fatal cases occurred.

281; 7. ST. THOMAS; *St. Thomas*. — Births 36; Deaths 44. Deaths are higher than in any quarter since the year 1849. There were many cases of phthisis, 4 of measles, 4 bronchitis, 1 case of ulcerated throat, 1 pneumonia, 1 influenza, 1 croup, 3 hydrothorax, 2 cancer. A most disastrous occurrence took place, a man's wife and 4 of his children having been consumed by their dwelling house accidentally taking fire; his only surviving child has since died of mesenteric phthisis.

282; 1. EXETER; *St. Sidwell*. — Births 118; Deaths 162. The deaths are largely in excess. Measles and scarlatina contribute 24, other fevers 4, diseases of respiratory organs, phthisis, pneumonia, and bronchitis 28, diarrhoea 4, diphtheria and thrush 4, croup 1, inquests 10, the hospital and workhouse 27. No death from small-pox has yet occurred in my district, but the disease has recently made its appearance in this city, in that usual *nidus* of epidemics, the low level constituting the parish of St. Edmund.

282; 2. EXETER; *St. David*. — Births 97; Deaths 124. Bronchitis and scarlatina have prevailed.

283; 1. NEWTON ABBOT; *Teignmouth*. — Births 77; Deaths 78. Measles and scarlatina have been prevalent, and the deaths are above the average.

283; 2. NEWTON ABBOT; *Chudleigh*. — Births 61; Deaths 31. Small-pox is now prevailing at Bovey Tracey; 1 case only has yet proved fatal.

283; 3. NEWTON ABBOT; *Moretonhampstead*. — Births 27; Deaths 24. The deaths considerably exceed the average, owing to scarlatina having prevailed, no less than 11 persons (chiefly children) having died of that disease.

284; 2. TOTNES; *Brixham*. — Births 47; Deaths 42. The deaths are rather above the average. Diphtheria has caused 2 deaths in one family, and I am informed that another child is dangerously ill.

284; 4. TOTNES; *Totnes*. — Births 41; Deaths 60. The deaths exceed by 10 the highest number ever registered in any quarter during the time I have been registrar (since September 1854). The following diseases have been very prevalent, viz., scarlatina, whooping-cough, and bronchitis.

284; 5. TOTNES; *Buckfastleigh*. — Births 37; Deaths 18. Measles has prevailed, but there have been but 3 deaths, though scores of children and many adults have been suffering severely. The deaths are rather under the average.

286; 2. PLYMPTON ST. MARY; *Plympton*. — Births 75; Deaths 59. The deaths have been above the average; 18 children died from scarlatina and pneumonia after it; several from marasmus, &c. Small-pox has also been prevalent amongst the unvaccinated, but only one person died (an adult), which has caused the vaccination of children to be much better attended to.

287; 1. PLYMOUTH; *Charles-the-Martyr*. — Births 185; Deaths 176. The number of deaths considerably exceed those in the corresponding quarter of 1857. Small-pox and scarlatina have been very prevalent. From small-pox 17 deaths were registered, the majority being reported as "unvaccinated." Scarlatina has been fatal in 24 cases. 2 deaths from whooping-cough and 1 from diphtheria are recorded.

287; 2. PLYMOUTH; *St. Andrew*.—Births 296; Deaths 240. The deaths are slightly above the average, which the prevalence of small-pox and scarlatina will fully account for. The deaths from zymotic causes during the quarter are as follows: small-pox 15, scarlatina 36, whooping-cough 2, croup 4, diarrhœa 8, influenza 2, fevers 10, syphilis 4.

288; 1. EAST STONEHOUSE; *East Stonehouse*.—Births 123; Deaths 136. The deaths are above the average, from the fact that 20 Turkish seamen have died in the Royal Naval Hospital, principally from phthisis. I have registered 5 cases of variola.

289; 2. STOKE DAMEREL; *Clowance*.—Births 91; Deaths 75. The births are a little below the average, and the deaths above. 11 persons died from bronchitis, 1 from typhus, 1 from small-pox, 2 from scarlatina, 1 from whooping-cough, and 6 from pneumonia. Small-pox still prevails, but is not of a virulent nature.

289; 5. STOKE DAMEREL; *Tamar*.—Births 72; Deaths 56. There is an increase of births and deaths, particularly the latter, owing to many children dying of convulsions, whooping-cough, bronchitis, and phthisis.

290; 1. TAVISTOCK; *Buckland Monachorum*.—Births 66; Deaths 80. Deaths above the average at Beerferris parish, in consequence of 31 fatal cases of scarlatina under 8 years of age, and 2 of small-pox above 6 years of age, never vaccinated.

291; 3. OKEHAMPTON; *Okehampton*.—Births 40; Deaths 50. The increase of deaths in this quarter proceeds from whooping-cough, inflammation of the lungs, and small-pox.

292; 1. CREDITON; *Morchard Bishop*.—Births 43; Deaths 39. The increase of deaths is due to measles and scarlatina. 11 have died from measles, 3 from scarlatina.

293; 6. TIVERTON; *Bampton*.—Births 25; Deaths 44. Small-pox has broken out in this district, although one death only has taken place. The prejudice against vaccination still exists, some parents refusing to have their children vaccinated. The mortality is not above the average.

295; 4. BARNSTAPLE; *Ilfracombe*.—Births 40; Deaths 28. The increase of deaths has arisen from the prevalence of east winds. One death took place from inflammation of the windpipe, 2 from inflammation of the throat, 1 from diphtheria, 2 from whooping-cough, 2 from bronchitis, 3 from diarrhœa, 1 from scarlatina, and 1 from typhus.

296; 2. TORRINGTON; *Winkleigh*.—Births 19; Deaths 21. The deaths are considerably beyond the average. The deaths from scarlatina have been six, and one case of typhoid fever occurred. Several cases of scarlatina are at present prevailing in the parish of Winkleigh and the neighbourhood.

297; 2. BIDEFORD; *Northam*.—Births 40; Deaths 60. Deaths above the average. There were 4 fatal cases of scarlatina.

20. CORNWALL.

302; 2. ST. GERMANS; *St. Germans*.—Births 36; Deaths 40. The deaths are considerably above the average. 21 children died during the quarter, including 7 from fever and 6 from whooping-cough, brush, &c.

303; 1. LISKEARD; *Callington*.—Births 142; Deaths 109. The deaths are above the average; 22 were from fever, scarlatina, and typhus, the greater part of which occurred in the parish of Calstock, which still continues in an unhealthy state.

303; 2. LISKEARD; *Liskeard*.—Births 140; Deaths 100. Scarlatina is gradually disappearing, as also diphtheria, and the sub-district is attaining a more healthy state than for some time past. Small-pox is in the immediate neighbourhood, but no case has yet come under my observation.

303; 3. LISKEARD; *Looe*.—Births 56; Deaths 57. The deaths are above the average. 38 deaths of children from various causes have been registered, viz., from measles 8, scarlatina 8, whooping-cough 5, diphtheria 2, and other causes 15. The births rather exceed the average.

304; 2. BODMIN; *St. Mabyn*.—Births 24; Deaths 15. Diphtheria appears prevalent of late in part of this sub-district, and I have registered 4 deaths from this cause during the quarter.

305; 3. ST. COLUMB; *Newlyn*.—Births 25; Deaths 13. The number of births is fewer than has been registered for the last 10 years. This is mainly attributable to the large decrease in the population, consequent on emigration and removal (on account of mines ceasing to work) into the more busy-working districts.

307; 1. TRURO; *Probus*.—Births 29; Deaths 25. 7 deaths occurred from malignant sore throat, which has been very prevalent in my district.

307; 3. TRURO; *St. Agnes*.—Births 67; Deaths 42. Measles has been prevalent, though not very fatal. A few cases of small-pox have occurred, but not with fatal results. Vaccination still much neglected.

307; 4. TRURO; *St. Clement*.—Births 60; Deaths 33. Deaths considerably below the average.

308; 2. FALMOUTH; *Falmouth*.—Births 93; Deaths 69. The births and deaths are both above the average. Small-pox is very general in my district. I beg to draw your attention to the following case: In one house, situated in a very filthy yard in Falmouth, there were 13 persons attacked with the small-pox, of whom 8 had been vaccinated and 5 had not; the 8 who were vaccinated recovered, whilst the 5 who were unvaccinated died.

308; 3. FALMOUTH; *Penryn*.—Births 38; Deaths 22. In Falmouth small-pox has been very prevalent, and in this sub-district we have only had 3 non-fatal cases. One death has occurred from diphtheria.

309; 1. HELSTON; *Wendron*.—Births 73; Deaths 41. The births and deaths are about the average. One death occurred from small-pox, and the informant stated that there were several more cases in the neighbourhood, that is the north part of the district, adjoining Camborne and the parish of Illogan.

310; 2. REDRUTH; *Redruth*.—Births 85; Deaths 48. The deaths are 4 in excess of those of the corresponding quarter in last year, but about the average of the past 4 years, and call for no particular remark, other than that there has been unusual mortality amongst very aged persons.

310; 3. REDRUTH; *Illogan*.—Births 70; Deaths 54. The deaths exceed the average, and occurred principally from measles and phthisis in copper miners. One death occurred from small-pox after vaccination. There has been a caution posted in this district, requiring parents to have their children vaccinated, and with good effect, which has been the means of more vaccinations in December than for the former part of the year.

310; 4. REDRUTH; *Camborne*.—Births 99; Deaths 82. The deaths are slightly above the average. Measles and small-pox have been epidemic during the quarter, 11 deaths having been registered from the

former, and 10 from the latter disease. Vaccination has been very generally neglected amongst the poorer classes; but in consequence of the prevalence of small-pox they are now much alarmed, and are getting their children vaccinated.

310; 5. REDRUTH; *Phillack*.—Births 92; Deaths 46. Measles has prevailed during the quarter, but not very fatal.

311; 1. PENZANCE; *Uny Lelant*.—Births 58; Deaths 28. The deaths are rather below the average.

311; 2. PENZANCE; *St. Ives*.—Births 67; Deaths 35. The deaths a little under the average. 2 non-fatal cases of small-pox occurred in this sub-district, one in Towednack, and the other in the town; they were brought from other parishes. In all other respects the district is quite healthy.

311; 3. PENZANCE; *Marazion*.—Births 33; Deaths 23. 4 cases of small-pox have occurred in the town of Marazion alone, in persons unprotected by vaccination. They have all recovered, and the disease appears to have subsided, most persons in this town having been vaccinated.

21. SOMERSETSHIRE.

314; 1. WELLINGTON; *Wiveliscombe*.—Births 24; Deaths 29. There were 7 deaths from measles, 3 from diphtheria, and 1 from scarlatina; which diseases are all epidemic in the district.

314; 4. WELLINGTON; *Culmstock*.—Births 23; Deaths 15. One female died from small-pox, 10 others recovered, and the district is now free from the disease. Cases of diphtheria and malignant sore throat are very numerous, but are treated successfully.

315; 2. TAUNTON; *North Curry*.—Births 41; Deaths 27. Small-pox and diphtheria prevail to a slight extent, but without being fatal. The public vaccinators have been very energetic in vaccinating and re-vaccinating almost every individual who would consent to be operated on.

316; 4. BRIDGWATER; *Bridgwater*.—Births 126; Deaths 64. Births and deaths are about the average. Small-pox has broken out in several parts of the town, but with only one fatal result.

317; 3. LANGPORT; *Curry Rivell*.—Births 27; Deaths 24. One death from small-pox occurred at Puckington.

318; 1. CHARD; *Ilminster*.—Births 58; Deaths 40. The deaths are above the average; there were 10 fatal cases of fever.

318; 3. CHARD; *Chard*.—Births 45; Deaths 59. The deaths are considerably above the average; which I attribute principally to the prevalence of scarlatina, having registered 13 deaths from that disease.

319; 1. YEOVIL; *Coker*.—Births 55; Deaths 72. The deaths are in excess, which is attributable to the prevalence of measles; 25 deaths resulted from this disease and its consequences.

319; 2. YEOVIL; *South Petherton*.—Births 22; Deaths 29. The deaths are above the average, owing to the prevalence of scarlatina at Chiselborough; there were 5 deaths from scarlatina.

319; 3. YEOVIL; *Martock*.—Births 34; Deaths 38. The births are much below the average. Emigration has occurred to a greater extent than usual in this neighbourhood. The deaths rather exceed the average. Small-pox, and measles accompanied by a low or typhoid fever, have prevailed, but the number of deaths from these causes has been comparatively small.

319; 4. YEOVIL; *Yeoil*.—Births 71; Deaths 51. Small-pox has been and still is very prevalent, and

11 deaths occurred from this cause; but for this disease the number of deaths would have been light as compared with the corresponding quarter of last year.

320; 4. WINCANTON; *Bruton*.—Births 18; Deaths 37. I have registered 2 deaths from scarlatina, 1 from measles, 3 from diphtheria, and 2 from typhus.

321; 2. FROME; *Frome*.—Births 107; Deaths 77. The deaths are rather above the average, principally from an increased mortality of old persons, 28 being at 70 years of age and upwards.

323; 2. WELLS; *Glastonbury*.—Births 76; Deaths 47. Small-pox prevails throughout my district, although not very fatally.

324; 2. AXBRIDGE; *Burnham*.—Births 30; Deaths 37; The deaths are above the average, and include 15 from scarlatina.

324; 3. AXBRIDGE; *Banwell*.—Births 60; Deaths 55. There have been 9 sudden deaths.

325; 2. CLUTTON; *Chew Magna*.—Births 33; Deaths 22. The deaths have been barely above the average. But scarlatina, measles, and diphtheria, with low fever and pulmonary disease, have been very prevalent. Small-pox has entirely disappeared since the last quarter; the non-spreading of which I attribute to the almost universal vaccination that has been carried out in the district. The spread of measles and scarlatina among children in a portion of this district is very remarkable; one death only has yet taken place.

326; 4. BATH; *Lyncombe*.—Births 73; Deaths 113. 9 deaths occurred from small-pox, 7 of which were those of children unvaccinated.

326; 6. BATH; *Lansdown*.—Births 70; Deaths 87. The deaths are 17 above the average. Infantile diseases have prevailed. Of 5 persons who died from small-pox, 4 had never been vaccinated. 4 deaths occurred from scarlatina and 1 from diphtheria.

326; 7. BATH; *Batheaston*.—Births 52; Deaths 34. Scarlatina has been very prevalent; many of the cases have been accompanied with throat symptoms of an unusual and severe character, but nothing has occurred in my own practice that can fairly be called a new disease, or registered under the term diphtheria.

328; 1. BEDMINSTER; *Bedminster*.—Births 237; Deaths 190. The deaths are greater than in any corresponding quarter for many years; scarlatina prevailed, and caused 62 deaths. 9 cases of typhus, 5 of measles, and 43 of diseases of the respiratory organs have also been registered.

VI. WEST MIDLAND COUNTIES.

22. GLOUCESTERSHIRE.

329; 1. BRISTOL; *St. Mary Redcliff*.—Births 131; Deaths 116. The deaths are above the average, owing to the prevalence of scarlatina.

329; 4. BRISTOL; *St. James*.—Births 94; Deaths 139. The deaths are above the average. Scarlatina still prevails; 18 deaths have been registered from that disease alone.

330; 1. CLIFTON; *Clifton*.—Births 111; Deaths 121. The deaths are rather above the average. 3 deaths occurred from diphtheria, 9 from scarlatina. Phthisis and pneumonia have also been prevalent. A young lady, aged 18, was killed by accidentally falling from St. Vincent's Rocks, 300 feet down.

333; 1. DURSLEY; *Wotton-under-Edge*.—Births 41; Deaths 54. The deaths greatly exceed the average, and include 17 from scarlatina.

336; 2. GLOUCESTER; *St. Nicholas*.—Births 82; Deaths 56. The deaths are a little above the average. There were 14 from small-pox.

336; 3. GLOUCESTER; *St. John the Baptist*.—Births 51; Deaths 65. The births are below and the deaths considerably above the average. There were from small-pox 13 deaths.

336; 4. GLOUCESTER; *South Hamlet*.—Births 93; Deaths 64. Births and deaths about the average. There were from small-pox 9 deaths, scarlatina 12.

337; 2. WHEATENHURST; *Frampton*.—Births 30; Deaths 35. The deaths are somewhat above the average, owing to the prevalence of scarlatina, of which there have been 11 fatal cases, and also 1 of typhus, 10 of which occurred in the parish of Eastington in that part called Alkerton, which is badly supplied with good water.

338; 1. STROUD; *Stonehouse*.—Births 23; Deaths 23. There have been 5 deaths from scarlatina and 1 from typhus.

338; 3. STROUD; *Bisley*.—Births 31; Deaths 25. There have been 8 fatal cases of measles, and 4 of typhus.

338; 4. STROUD; *Stroud*.—Births 66; Deaths 74. Scarlatina must be attributed mainly to the dirty and undrained state of those parts of the district where it has prevailed. The fatal and severe cases have invariably occurred in close, dirty, and undrained houses, where the air has been poisoned by smells from the cesspool.

338; 5. STROUD; *Rodborough*.—Births 33; Deaths 5. The deaths are above the average; 6 from scarlatina.

342; 2. STOW-ON-THE-WOLD; *Stow-on-the-Wold*.—Births 28; Deaths 15. Small-pox has prevailed, but owing to vaccination has not extended.

344; 1. CHELTENHAM; *Charlton Kings*.—Births 5; Deaths 52. The deaths are considerably above the average, owing to the prevalence of diarrhoea and abeola.

344; 2. CHELTENHAM; *Cheltenham*.—Births 261; Deaths 266. The deaths are considerably more than the average; they include 37 from measles, 3 whooping-cough, 19 scarlatina, 15 small-pox, and 4 from diphtheria.

23. HEREFORDSHIRE.

347; 1. ROSS; *Sollershope*.—Births 22; Deaths 2. Small-pox is very prevalent, although there have been but two fatal cases during the quarter.

347; 2. ROSS; *Ross*.—Births 70; Deaths 57. There have been 13 deaths from small-pox.

24. SHROPSHIRE.

353; 2. CLUN; *Bishop's Castle*.—Births 18; Deaths 21. Scarlatina has been prevalent, and has proved fatal in 6 or 7 cases.

354; 1. CHURCH STRETTON; *Church Stretton*.—Births 18; Deaths 20.—Diphtheria has been very prevalent the last two preceding quarters. Bronchitis appears to have been the leading disease during the last 3 months.

358; 2. MADELEY; *Madeley*.—Births 105; Deaths 5. The deaths are above the average; there have been 2 deaths from typhus, and 6 from low fever and ulcerated throat among children.

360; 1. SHREWSBURY; *St. Mary*.—Births 110; Deaths 119. The deaths are above the average, chiefly arising from 25 deaths registered in 3 public institutions in this district.

360; 2. SHREWSBURY; *St. Chad*.—Births 70; Deaths 46. The deaths are below the average.

362; 3. ELLESMERE; *Ellesmere*.—Births 50; Deaths 37. There have been several cases of "diphtheria," which proved fatal to 5 children and one adult.

365; 3. WELLINGTON; *Wombidge*.—Births 83; Deaths 50. Diphtheria has been very prevalent during the last 4 months, and still continues; several families are suffering from it at the present time. There have been 7 deaths from diphtheria during the quarter.

25. STAFFORDSHIRE.

368; 1. STONE; *Stone*.—Births 71; Deaths 63. The prevalence of scarlatina accounts for the increase of deaths during the quarter; there having been 14 deaths from that disease.

369; 2. NEWCASTLE-UNDER-LYME; *Newcastle-under-Lyme*.—Births 125; Deaths 164. The great increase in the number of deaths is owing to measles, scarlatina, and whooping-cough.

370; 1. WOLSTANTON; *Wolstanton*.—Births 86; Deaths 96. There have been 27 deaths from scarlatina during the quarter.

370; 2. WOLSTANTON; *Tunstall*.—Births 184; Deaths 135. Diphtheria caused 8 deaths, scarlatina, &c. 21, typhus 5, measles 2, small-pox 2, and bronchitis 11.

370; 3. WOLSTANTON; *Burslem*.—Births 188; Deaths 195. The deaths are 84 above the average of the season, and 33 more than the largest number registered in any previous quarter. The following are the causes of death in 117 cases:

	Oct.	Nov.	Dec.	Totals.
Diseases of respiratory organs, principally phthisis, bronchitis, and asthma	11	11	26	48
Measles, alone or followed by other diseases, mostly pneumonia	2	8	18	28
Diarrhoea, infantile	6	5	5	16
Low typhoid fever	.	6	1	7
Whooping-cough, followed by measles in one case, in Decem.	.	2	4	6
Croup	.	3	2	5
Inflammatory disease of the throat; diphtheria in one (November) case	.	3	1	4
Scarlatina	.	1	2	3
	19	39	59	117

371; 2. STOKE-UPON-TRENT; *Shelton*.—Births 156; Deaths 154. The deaths from epidemic scarlatina have been 30.

371; 3. STOKE-UPON-TRENT; *Stoke-upon-Trent*.—Births 79; Deaths 72. The deaths are rather above the average, which I attribute principally to scarlatina having been prevalent.

372; 2. LEEK; *Leek*.—Births 93; Deaths 81.—The births and deaths are above the average. There have been 18 deaths from diphtheria, 7 from whooping-cough, 4 from typhoid, 1 typhus, and 1 scarlatina.

374; 1. UTTOXETER; *Uttoxeter*.—Births 51; Deaths 47. Scarlatina has prevailed, as also has diphtheria; remittent and other fevers, to a slight extent.

375; 3. BURTON-UPON-TRENT; *Gresley*.—Births 86; Deaths 55. The deaths are above the average, owing to the prevalence of scarlatina anginosa.

379; 4. WOLVERHAMPTON; *West*.—Births 183; Deaths 164. The deaths are above the average. Scarlatina has prevailed, and caused 28 deaths.

379; 5. WOLVERHAMPTON; *East*.—Births 390; Deaths 341. Scarlatina has been very prevalent, and has caused many deaths.

379; 6. WOLVERHAMPTON; *Willenhall*.—Births 249; Deaths 169. The deaths exceed the average, owing to the prevalence of scarlatina, which caused 40 deaths, chiefly in the most healthy part of my district.

379; 7. WOLVERHAMPTON; *Bilston*.—Births 275; Deaths 180. Births have decreased, owing to the stoppage of iron works, and part of the population has gone elsewhere. The deaths exceed the average. The number increased greatly during December, 75 out of the 180 occurring during that month. Scarlatina caused 33 deaths, whooping-cough 7, small-pox 1.

380; 1. WALSALL; *Darlaston*.—Births 145; Deaths 97. The increase in the number of deaths is owing to the prevalence of diseases of the respiratory organs.

381; 2. WEST BROMWICH; *Oldbury*.—Births 181; Deaths 130. The deaths are rather above the average, and include 13 deaths from fever, 6 from typhus, and 3 scarlatina.

381; 3. WEST BROMWICH; *South-west*.—Births 203; Deaths 125. The deaths are above the average. Pneumonia has been very prevalent; 50 deaths are entered under this head and bronchitis.

381; 5. WEST BROMWICH; *Wednesbury*.—Births 229; Deaths 113. The deaths include 2 from typhus, 6 from infantile fever, 3 from whooping-cough, 12 from bronchitis, and 1 from diphtheria.

382; 1. DUDLEY; *Rowley Regis*.—Births 202; Deaths 153. The deaths are above the average, owing to the prevalence of fever (22 deaths), bronchitis (12 deaths), and an unusual number of accidents (12 deaths).

382; 3. DUDLEY; *Sedgley*.—Births 390; Deaths 245. The deaths exceed the average, and 144 of the number appear to have occurred from the following causes: scarlatina 20; typhus 7; fever (undistinguished) 9; diphtheria 9; bronchitis 30, which in some cases was not the primary cause; pneumonia 21, which in some instances was also a secondary cause; croup 3; pertussis 3; phthisis 11; infantile convulsions 19, in several cases brought on by previous disease; diarrhoea 10, principally in young children; cholera maligna 1; and English cholera 1.

382; 4. DUDLEY; *Dudley*.—Births 472; Deaths 307. The deaths are about the average. Out of the number 145 were from the following diseases; namely, pneumonia 38, diarrhoea 32, convulsions 28, fever 27, bronchitis 19, small-pox after vaccination 1.

26. WORCESTERSHIRE.

383; 1. STOURBRIDGE; *Halesowen*.—Births 118; Deaths 70. The deaths are above the average, and include 14 from pneumonia, and 5 from diphtheria.

383; 2. STOURBRIDGE; *Stourbridge*.—Births 220; Deaths 157. The deaths are much above the average, owing chiefly to the prevalence of typhus, scarlatina, measles, and bronchitis.

383; 3. STOURBRIDGE; *Kingswinford*.—Births 340; Deaths 193. 3 deaths have occurred from small-pox after vaccination, and 1 death from small-pox without previous vaccination.

387; 1. WORCESTER; *West Worcester*.—Births 60; Deaths 61. These are the largest numbers of births and deaths I have ever registered during the quarter. The excess of deaths has been caused by disease of the lungs and air passages.

387; 2. WORCESTER; *North Worcester*. Births 81; Deaths 69. 25 of the deaths occurred in county infirmary and union workhouse.

389; 1. EVESHAM; *Evesham*.—Births 77; Deaths 70. 33 deaths have occurred from measles.

393; 1. KING'S NORTON; *King's Norton*.—Births 94; Deaths 72. The deaths are slightly above the average, caused by scarlatina, diarrhoea, and bronchitis amongst children, 32 of whom died under 6 years of age.

393; 3. KING'S NORTON; *Harborne*.—Births 150; Deaths 81. Births and deaths both above the average. 23 deaths occurred from pneumonia, 7 from scarlatina, 5 from diarrhoea, and 3 from typhus.

27. WARWICKSHIRE.

394; 1. BIRMINGHAM; *Lady Wood*.—Births 341; Deaths 222. The deaths are a little above the average. The principal causes are: scarlatina 24 deaths, whooping cough 16, bronchitis 22, pneumonia 14, fever 13, convulsions 13, marasmus 10, phthisis 6, diarrhoea 7, and rubeola 4.

394; 2. BIRMINGHAM; *St. Thomas*.—Births 318; Deaths 288. Scarlatina has been fatal in this district in 71 cases, and the deaths exceed the average of four corresponding quarters by 122. The greatest mortality prevailed during the month of November and the first two weeks in December, nearly approaching to 1 death each week in 1,000 of the population.

394; 3. BIRMINGHAM; *St. Martin*.—Births 270; Deaths 233. The number of deaths, 233, is about a fourth higher than the average of corresponding quarters. Scarlatina and typhus have been very prevalent, and proved fatal in 38 cases; 20 persons died from pneumonia, 17 from bronchitis, 11 from diarrhoea, 7 from pertussis, and 8 from small-pox, only one of the last-mentioned having been previously vaccinated.

394; 5. BIRMINGHAM; *St. Philip*.—Births 69; Deaths 85. The increase of deaths this quarter has arisen from various causes. Scarlatina caused 11 deaths, bronchitis 8, and diarrhoea 6.

394; 8. BIRMINGHAM; *St. George*.—Births 425; Deaths 369. The following are the chief causes of death during the quarter: phthisis 29, pneumonia 17, bronchitis 36, pertussis 10, typhus 7, fever 19, scarlatina 28, diarrhoea 24, sore throat 4, convulsions 20, small-pox 2 (1 not vaccinated), measles 7.

394; 9. BIRMINGHAM; *All Saints*.—Births 171; Deaths 176. The births and deaths are below the average, which I attribute to a large manufactory, in which upwards of 1,000 hands were employed, being closed, causing a large number of houses to be unoccupied.

395; 1. ASTON; *Deritend*.—Births 294; Deaths 219. The deaths are 25 per cent. above the average, which is accounted for in part by the prevalence of scarlatina, which caused 38 deaths; latterly bronchitis has been more fatal, and 16 cases have been registered within the last 5 weeks.

395; 2. ASTON; *Duddeston*.—Births 387; Deaths 232. The deaths are above the average, bronchitis and scarlatina having prevailed, bronchitis causing 42 deaths and scarlatina 29. Two deaths have occurred from English cholera.

395; 3. ASTON; *Erdington*.—Births 180; Deaths 104. Fever, especially scarlatina, has been very prevalent, particularly amongst children, 18 deaths being attributed to it.

400; 2. COVENTRY; *Holy Trinity*.—Births 200; Deaths 98. The return shows an improving state of the public health. The total number of deaths is rather under the average, but there is a decidedly favourable feature in the diminished amount of mortality amongst young children. It has almost uniformly been the case for years past, that considerably more than half the total number of deaths have been those of children under 5 years old. Last quarter the proportion was 62 out of 105; this quarter it is 32 out of 98. There are 11 fatal cases of phthisis, 5 of small-pox, and 3 of diphtheria.

401; 1. RUGBY; *Rugby*.—Births 115; Deaths 98. The deaths are 38 above the average, owing chiefly to the prevalence, in some parts of my district, of scarlatina, typhus, and diphtheria. There have been 5 deaths from typhus, 23 from scarlatina, and 5 from diphtheria. In the village of Newbold-upon-Avon alone (pop. 473) I have registered 8 deaths from scarlatina (3 malignant), 2 from typhus, and 1 from diphtheria. In this village the sanitary arrangements have been far from satisfactory, and fever of every type has been prevalent during the summer. The local authority has now appointed a sanitary inspector, and considerable attention has been paid to the removal of nuisances.

404; 1. STRATFORD-ON-AVON; *Kineton*.—Births 22; Deaths 21. 8 deaths arose from scarlatina, 7 in the parish of Easington, 1 in Kineton; of these 7, 4 occurred in one house.

404; 3. STRATFORD-ON-AVON; *Stratford-on-Avon*.—Births 50; Deaths 50. Scarlatina is still prevalent, but is now on the decrease. 13 children have died from it, and 4 from measles.

404; 4. STRATFORD-ON-AVON; *Old Stratford*.—Births 39; Deaths 52. There has been an increase in the number of deaths this quarter, owing to scarlatina and measles having been prevalent. Deaths from scarlatina 17, and from measles 6.

VII. NORTH-MIDLAND COUNTIES.

28. LEICESTERSHIRE.

416; 3. BARROW-UPON SOAR, *Rothley*.—Births 35; Deaths 38. Scarlatina, whooping-cough, and measles have prevailed.

417; 1. LEICESTER; *East*.—Births 340; Deaths 289. The excess of mortality is owing to the prevalence of measles, whooping-cough, pneumonia, phthisis, premature births, debility, and convulsions.

417; 2. LEICESTER; *West*.—Births 220; Deaths 198. The deaths are above the average. Scarlatina caused 12 deaths, measles 30, and whooping-cough 13.

418; 3. MELTON MOWBRAY; *Clawson*.—Births 37; Deaths 26. The deaths have been above the average. Scarlatina has been fatal to 4 children at Stathern, 3 in one family.

29. RUTLANDSHIRE.

419; 1. OAKHAM; *Oakham*.—Births 90; Deaths 78. The deaths are considerably above the average, which may be attributed to the prevalence of fever (chiefly scarlatina), from which cause there have been 12 deaths; while from small-pox there have only been 5, although it has been as prevalent as fever, especially in Oakham, in which place 4 out of the 5 deaths occurred. There has until within the last few months been great neglect of attention to vaccination in my district, but the spread of small-

pox, combined with the threats of the magistrates that they would enforce the penalty if vaccination were not attended to, has caused great numbers to have their children vaccinated who would not otherwise have done so. The sanitary arrangements in Oakham and the neighbourhood are good, and a majority of the fatal fever cases occurred in the village of Whissendine, where fever has occasionally broken out, and carried off a considerable number of children.

30. LINCOLNSHIRE.

423; 4. SPALDING; *Spalding*.—Births 77; Deaths 51. Deaths are not above the average, although there has been a large number of cases of small-pox; the same may be said of diphtheria. The number of deaths from the above diseases during the quarter was 6 each.

423; 5. SPALDING; *Moulton*.—Births 15; Deaths 16. The deaths are above the average. Diphtheria has prevailed extensively, and 5 children have fallen victims to it. Small-pox prevails in this neighbourhood.

425; 3. BOSTON; *Sibsey*.—Births 17; Deaths 21. More deaths have occurred than usual, diphtheria being the cause, and chiefly among children.

428; 1. LINCOLN; *South-west*.—Births 91; Deaths 60. Typhus has been very prevalent.

428; 2. LINCOLN; *Home*.—Births 222; Deaths 207. The mortality in this sub-district has been considerably above the average; the excess is in the parishes of the city of Lincoln, 183 of the 207 deaths having occurred in Lincoln. The most numerous certified causes are fevers 47, bronchitis and pneumonia 18, consumption 12, atrophy and marasmus 10, disease of the chest 6, diarrhoea 5, diphtheria 3. During the quarter two inquests have been held (where more than one death occurred in the same house), in which the verdicts were: "Fever arising from preventible causes." "Diarrhoea made fatal by pestiferous stench." There is still a great amount of sickness existing in Lincoln.

428; 3. LINCOLN; *North-east*.—Births 80; Deaths 47. The deaths are above the average, and include 10 cases of fever and 3 of diphtheria.

429; 1. HORNCastle; *Wragby*.—Births 35; Deaths 24. 8 deaths occurred from diphtheria.

429; 2. HORNCastle; *Horncastle*.—Births 61; Deaths 59. The deaths are considerably above the average, owing to the prevalence of diphtheria.

429; 3. HORNCastle; *Tetford*.—Births 39; Deaths 26. The deaths are above the average, arising from the prevalence of diphtheria, which caused 6 deaths.

429; 4. HORNCastle; *Tattershall*.—Births 50; Deaths 28. The deaths a little above the average, owing to diphtheria prevailing, and causing 7 deaths.

430; 3. SPILSBY; *Spilsby*.—Births 70; Deaths 60. Deaths are above the average. Diphtheria has been very prevalent in the fen part of the district, and 12 deaths have occurred from it. 10 persons have died from consumption; 5 from whooping-cough. The number of deaths is greater than in any preceding quarter since the Registration Act came into operation.

431; 4. LOUTH; *Saltfleet*.—Births 45; Deaths 29. Diphtheria has been prevalent among the young.

431; 5. LOUTH; *Tetney*.—Births 53; Deaths 27. The deaths are above the average, and include 1 from typhus, 1 from dysentery, 2 from small-pox, and 2 from diseased throat.

432; 1. CAISTOR; *Great Grimsby*.—Births 150; Deaths 89. The births are rather in excess of the average, probably arising from the extension of the fishing trade, which has caused some immigration from Barking. The deaths are a full average, 13 being from diphtheria.

432; 3. CAISTOR; *Market Rasen*.—Births 80; Deaths 47. Deaths rather above the average, partly by diphtheria, which caused 8 deaths. Small-pox prevails at Walesby, but no fatal cases have yet occurred.

433; 2. GLANFORD BRIGG; *Winterton*.—Births 70; Deaths 35. The deaths are below the average. Diphtheria is very prevalent, and caused 3 deaths.

433; 3. GLANFORD BRIGG; *Barton*.—Births 96; Deaths 92. Scarlatina has been more prevalent at Barton than I have known it to be for 18 years. Out of 56 deaths occurring in this parish, 30 have been caused by scarlatina, 6 by diphtheria, besides 4 others which would have been more correctly returned as sequelæ of scarlatina.

434; 3. GAINSBOROUGH; *Misterton*.—Births 24; Deaths 20. The deaths above the average. From typhus there were 2 deaths, diphtheria 5, bronchitis 1, scarlatina 2. In one house 3 deaths occurred from diphtheria. Sufficient attention is not paid to cleanliness.

434; 4. GAINSBOROUGH; *Gainsborough*.—Births 60; Deaths 80. Deaths are above the average. 15 cases of small-pox have been registered during the quarter, also 5 cases of diarrhœa, 13 of bronchitis, 7 of phthisis, and 3 of diphtheria.

31. NOTTINGHAMSHIRE.

435; 1. EAST RETFORD; *Gringley*.—Births 29; Deaths 27. There have been 2 deaths from fever, and 4 from diphtheria. These complaints have been prevailing in an epidemic form in this district, more particularly in the village of Gringley.

435; 3. EAST RETFORD; *East Retford*.—Births 78; Deaths 42. The deaths are not in excess, but 8 persons, principally children, have died from diphtheria.

436; 3. WORKSOP; *Anston*.—Births 20; Deaths 27. There have been 12 cases of diphtheria and sore throat.

436; 4. WORKSOP; *Carburton*.—Births 35; Deaths 17. Diphtheria has been very prevalent, and 2 or 3 cases were fatal; in those cases the persons were ill a few days with what appeared to be a sore throat, and then died very suddenly.

438; 1. BASFORD; *Greasley*.—Births 135; Deaths 75. The district has been generally healthy this past quarter, and the deaths are less than at the same period in 1857.

438; 2. BASFORD; *Ilkeston*.—Births 131; Deaths 103. There is a considerable increase in the number of deaths, owing to the prevalence of scarlatina, measles, and pneumonia. The former complaint has been succeeded by dropsy in numerous instances, some proving fatal.

438; 3. BASFORD; *Basford*.—Births 127; Deaths 158. The deaths are above the average. The mortality amongst children in this district is very great. Scarlatina is prevalent, 46 deaths having occurred from that disease, 43 of which were those of children under 9 years of age. The sanitary condition of this district is capable of improvement.

438; 4. BASFORD; *Bulwell*.—Births 73; Deaths 68. The deaths are above the average, occasioned chiefly by the prevalence of scarlatina and typhus,

especially in the parishes of Bulwell and Hucknall. The latter disease has now nearly disappeared.

438; 5. BASFORD; *Arnold*.—Births 70; Deaths 66. The deaths are considerably above the average. The increase is attributable to the prevalence of scarlatina and typhus, 9 deaths having been caused by the former epidemic, and 2 by the latter. Small-pox also is very prevalent in some parts of the district, although up to the present time one death only has arisen from it. I am certain that if sanitary laws were more fully carried out there would not be nearly so much sickness and mortality in this district.

439; 2. RADFORD; *Radford*.—Births 101; Deaths 102. The mortality for the quarter is much above the average. 42 deaths are ascribed to measles, scarlatina, typhus, and pneumonia; viz. measles 15, pneumonia 11, scarlatina 8, typhus 8.

439; 4. RADFORD; *Snenton*.—Births 88; Deaths 100. The number of deaths is considerably more than in the same quarter of last year. Deaths from fever 20, small-pox 2, diarrhœa 7, dysentery 2.

440; 1. NOTTINGHAM; *Sherwood*.—Births 66; Deaths 84. The deaths are considerably above the average, there were 22 from scarlatina and typhus.

440; 2. NOTTINGHAM; *St. Mary*.—Births 65; Deaths 87. The deaths are much above the average, 30 of these being from scarlatina.

440; 3. NOTTINGHAM; *St. Ann*.—Births 156; Deaths 203. The deaths are very much above the average. Scarlatina has been prevalent, 27 deaths having been registered from that disease, 6 from small-pox, 9 from typhus, 8 from diphtheria, and 5 from measles.

440; 4. NOTTINGHAM; *Byron*.—Births 122; Deaths 157. The deaths this quarter are above the average. 20 deaths occurred from scarlatina, 11 from diarrhœa, 6 from dysentery, 3 from typhus, 2 from small-pox, 16 from phthisis.

440; 7. NOTTINGHAM; *Park*.—Births 38; Deaths 74. The deaths this quarter show an increase of about 70 per cent. The district includes the general hospital, and 25 deaths occurred there. From scarlatina, diphtheria, and laryngitis there have been 9 deaths, fevers 10. Measles and fevers have been very prevalent, especially scarlatina with diphtheria, which has been very fatal. I never knew measles so bad in this town. For 13 months previous to this quarter I have not registered a death from measles.

441; 2. SOUTHWELL; *Kneals*.—Births 83; Deaths 79. The deaths are greater in number than they have ever been since the Registration Act came into operation. 10 deaths occurred from diphtheria. Scarlatina and measles have also been very prevalent. A great deal of sickness prevails all over the district.

442; 3. NEWARK; *Newark*.—Births 93; Deaths 70. The number of deaths is less than during the same quarter last year. The improved state of the health of the inhabitants is attributable to our sanitary improvements. The deaths include 1 from typhoid fever, 5 from scarlatina and typhus, and 3 from malignant sore throat.

32. DERBYSHIRE.

445; 1. DERBY; *St. Alkmund*.—Births 148; Deaths 159. The deaths are about one third more than the average. From measles 25, inflammation of the lungs 18, scarlatina 24, diphtheria 12; all which are of children, and the greater portion infants.

445; 2. DERBY; *St. Peter*.—Births 280; Deaths 293. This is by far the highest number of deaths ever returned. Scarlatina and measles have been remarkably fatal. Deaths from scarlatina 52, measles

35, consumption 32, diphtheria 11, bronchitis 10, pneumonia 8, small-pox 3, and whooping-cough 2.

446; 1. BELPER; *Duffield*.—Births 35; Deaths 43. The deaths are rather above an average. Scarletina has been very prevalent, and caused 4 deaths.

446; 3. BELPER; *Belper*.—Births 73; Deaths 77. The number of deaths is above the average. Typhus is prevalent, and 9 deaths are recorded from this cause, and 2 from scarlatina. The sanitary condition of the town will admit of considerable improvement; foul smells emanate from the sewers and cesspools, and in some of the alleys human excrements are lying until washed away by the rain.

446; 4. BELPER; *Ripley*.—Births 107; Deaths 90. The deaths this quarter are in excess; 34 persons have died from scarlatina and diphtheria.

446; 6. BELPER; *Wirksworth*.—Births 45; Deaths 55. The deaths are more than double the average. This arises chiefly from the prevalence of scarlatina and diphtheria, as 18 of the deaths have been from these diseases. The epidemic now seems much abated.

447; 3. ASHBORNE; *Ashborne*.—Births 32; Deaths 32. The deaths are above the average, and include 10 from scarlatina.

448; 1. CHESTERFIELD; *Ashover*.—Births 87; Deaths 83. The deaths are above the average, owing to the prevalence of scarlatina, that having been the cause of death in 31 cases. More than half the deaths are of children under 6 years of age.

448; 2. CHESTERFIELD; *Chesterfield*.—Births 275; Deaths 158. The births and deaths are above the average, which may be chiefly attributed to the rapid increase of the population in the sub-district, especially in the neighbourhood of coal and iron works. The chief causes of death are pneumonia 15, bronchitis 6, whooping-cough 5, convulsions 19, scarlatina 15, diphtheria and ulcerated sore throat 5, phthisis 15, fever 5, disease of heart 9, diarrhœa 3.

450; 2. CHAPEL-EN-LE-FRITH; *Chapel-en-le-Frith*.—Births 92; Deaths 70. The chief causes of death have been measles 5, scarlatina 9, whooping-cough 2, and bronchitis 7.

451; 2. HAYFIELD; *Hayfield*.—Births 60; Deaths 57. Scarletina has been prevalent, but only 4 cases have proved fatal.

VIII. NORTH-WESTERN COUNTIES.

33. CHESHIRE.

452; 3. STOCKPORT; *Heaton Norris*.—Births 147; Deaths 112. The deaths are below the average. Although scarlatina has been epidemic, numbering 13 per cent. in the present return, yet it has not partaken of that malignant type it evinced in December 1854. There is almost an entire absence of fever, and the labouring classes at present have plenty of work at fair remunerative wages.

453; 2. MACCLESFIELD; *Bollington*.—Births 73; Deaths 73. The deaths are much above the average, and the district is very unhealthy at this time. Fever prevails, and has caused 2 deaths.

453; 4. MACCLESFIELD; *East*.—Births 83; Deaths 95. The deaths are above the average. Pneumonia, whooping-cough, and measles have been very prevalent.

453; 5. MACCLESFIELD; *West*.—Births 111; Deaths 140. The deaths are above the average, arising from the prevalence of whooping-cough, bronchitis, and pneumonia; a few from croup, and two from diphtheria.

455; 3. RUNCORN; *Runcorn*.—Births 130; Deaths 73. The deaths are below the average. No epidemic disease has prevailed in this sub-district, with the exception of one death from scarlatina, and in this case the infection was brought in a female's clothes from Liverpool. Parents have neglected the vaccination of their children very much during the quarter.

457; 2. CONGLETON; *Congleton*.—Births 140; Deaths 155. The deaths are a third above the average. Scarletina has been very prevalent, and has been fatal in 28 cases. Diphtheria has caused 2 deaths, and 4 deaths have been caused by "disease of throat." Sanitary arrangements in Congleton are very defective. Notwithstanding that nuisances abound in many localities, scarcely anything is done by the authorities to have them removed.

458; 2. NANTWICH; *Nantwich*.—Births 68; Deaths 59. The deaths are above the average, owing to the prevalence of diphtheria, from which disease 13 occurred.

459; 2. GREAT BOUGHTON; *Chester Castle*.—Births 184; Deaths 153. The deaths are above the average, and include 7 from fever, 6 from scarlatina, 1 from typhus, 5 from small-pox, 14 from measles, 8 from bronchitis, and 9 from pneumonia. 4 of the deaths from scarlatina occurred in one house, where 9 persons lay ill with it at the same time.

459; 3. GREAT BOUGHTON; *Chester Cathedral*.—Births 171; Deaths 159. The deaths have exceeded the average by about 40, and include 7 cases of small-pox (an unusual visitant in this district of late years), 4 of scarlatina, 18 of fevers (typhus and other), and 7 of measles.

34. LANCASHIRE.

461; 1. LIVERPOOL; *St. Martin*.—Births 485; Deaths 716. The deaths are greatly above the average, owing to the continued prevalence of scarlatina and bronchitis. From the former disease 90 deaths have occurred, and from the latter 78. Measles and whooping-cough are also prevalent.

461; 2. LIVERPOOL; *Howard Street*.—Births 227; Deaths 318. Diseases of the lungs prevailed. There were 100 cases of bronchitis, 11 measles, 7 diarrhœa, 1 cholera, 33 scarlatina, 2 typhus, 15 phthisis, 19 whooping-cough.

461; 3. LIVERPOOL; *Dale Street*.—Births 260; Deaths 272. Compared with those of the previous quarter, there has been an increase of 11 in the deaths. Bronchitis 51, scarlatina 37, tabes mesenterica 27, convulsions 21, phthisis 19, pneumonia 17, whooping-cough 13, measles 11.

461; 4. LIVERPOOL; *St. George*.—Births 122; Deaths 129. The deaths are more than the average. This increase is to be attributed to the prevalence of bronchitis and phthisis, and also of scarlatina amongst children. There have been 19 deaths from scarlatina, 6 from whooping-cough, 3 from typhus, 2 from small-pox (1 not vaccinated), 1 from measles.

461; 5. LIVERPOOL; *St. Thomas*.—Births 266; Deaths 228. The births and deaths, although rather lower than in the corresponding quarters, are still about the average, when the reduction of population consequent on the taking down of old houses in the district is considered. The deaths comprise 34 cases of fever, 26 of which are described as scarlatina, 2 typhus, and the remainder simply fever. 5 cases have been registered of small-pox (3 after vaccination and 2 not vaccinated), 1 case of diphtheria, 2 of measles, 32 of bronchitis, 16 phthisis, 1 whooping cough.

461; 6. LIVERPOOL; *Mount Pleasant*.—Births 405; Deaths 541. Scarlatina still continues to be very prevalent and fatal amongst children. With this exception, I believe the district to be very healthy at the present time.

461; 7. LIVERPOOL; *Islington*.—Births 389; Deaths 325. The deaths include the following: from bronchitis 41, phthisis 42, measles 8, typhus and other fever 13, scarlatina 30, pneumonia 22, whooping-cough 17, diarrhoea and dysentery 18, small-pox 3, diphtheria 2. The district upon the whole healthy.

462; 4. WEST DERBY; *Crosby*.—Births 32; Deaths 33. Scarlatina and other infantile diseases have caused 15 deaths.

462; 6. WEST DERBY; *West Derby*.—Births 484; Deaths 318. The deaths exceed the average. This increase is owing to the population being now much greater than it was a few years back, and also to a greater number of old people dying this quarter from the change in the temperature; also to the prevalence of measles, whooping-cough, bronchitis, and scarlatina. The last-named disease began to increase in the month of November 1857, and has continued to be very prevalent during the whole of the year 1858, but especially in the present quarter. I am not aware of any particular cause of this additional number of deaths from scarlatina, but apparently it cannot be attributed to a want of good sanitary regulations. There have been 54 deaths from scarlatina, 20 from bronchitis, 16 from measles, 12 from whooping-cough, 7 from diarrhoea, and 3 from typhus.

463; 2. PRESCOT; *Much Woolton*.—Births 44; Deaths 31. The deaths are above the average, arising from small-pox and many cases of diphtheria.

463; 6. PRESCOT; *St. Helen's*.—Births 352; Deaths 198. The deaths are below the average; they include from phthisis 16, pneumonia 16, bronchitis 15, diarrhoea 12, typhus 11, remittent fever 7, scarlatina 5, whooping-cough 4.

465; 1. WIGAN; *Standish*.—Births 54; Deaths 40. The deaths are about the average. From whooping-cough 3, from typhus 2, from scarlatina 6.

465; 3. WIGAN; *Wigan*.—Births 402; Deaths 354. The deaths exceed the average, including from small-pox (without vaccination) 1, measles 24, scarlatina 37, whooping-cough 4, typhus 10, bronchitis 38, croup 12, diarrhoea 19, pneumonia 12, diphtheria 5, phthisis 29. 229 children died under five years of age. Measles, scarlatina, whooping-cough, typhus, and bronchitis have prevailed to a great extent, and still continue.

465; 4. WIGAN; *Hindley*.—Births 185; Deaths 117. This district is increasing in population, through the extension of collieries, &c., which may partly account for the excess of births and deaths; yet epidemics prevailed during the whole of the quarter, such as measles, scarlatina, and for the last few weeks we have had several cases of typhoid bronchitis, &c., and scarlatina is now raging of a malignant kind.

466; 4. WARRINGTON; *Warrington*.—Births 260; Deaths 153. The deaths are rather below the average, which I attribute to sanitary improvements. Small-pox is rather prevalent at the present time, but one case only has ended fatally. There have been 6 deaths from scarlatina and 2 from typhus.

467; 4. LEIGH; *Atherton*.—Births 95; Deaths 126. Deaths from scarlatina 32, by an explosion in a coal-mine 25, from measles 1, from small-pox 1.

468; 2. BOLTON; *Hulton*.—Births 49; Deaths 53. The deaths are above the average, owing to the prevalence of scarlatina, which proved fatal in 16 cases.

468; 10. BOLTON; *Little Bolton*.—Births 234; Deaths 135. The deaths are rather below the average, notwithstanding there has been much sickness. There have been 6 fatal cases of fever, 5 variola, 7 scarlatina, and 16 rubeola, which latter disease is now prevalent.

468; 11. BOLTON; *Bolton Eastern*.—Births 220; Deaths 200. The deaths exceed the average, and include 5 from typhus, 5 infantile fever, 3 small-pox, 8 diarrhoea and dysentery, 25 rubeola, and 18 scarlatina. Heavy fogs and a cold damp atmosphere may have had an unwholesome effect.

468; 12. BOLTON; *Bolton Western*.—Births 225; Deaths 185. The deaths are above the average, owing to scarlatina, measles, and small-pox being epidemic. The deaths from measles were 21, from scarlatina 33, from small-pox 7. Only one case of fatal small-pox occurred after vaccination, and in that case the parties could not produce any evidence of it.

469; 6. BURY; *South Bury*.—Births 147; Deaths 110. The deaths are over the average, the most fatal causes being bronchitis 10, pneumonia 10, diphtheria 4, phthisis 7, measles 10, scarlatina 6, and typhoid fever 9.

469; 7. BURY; *North Bury*.—Births 105; Deaths 130. The deaths are considerably over the average.

471; 1. CHORLTON; *Didsbury*.—Births 56; Deaths 77. I attribute the increase of deaths to the unhealthy state of the weather, and to the mortality amongst children from scarlatina.

471; 2. CHORLTON; *Ardwick*.—Births 376; Deaths 320. Fever caused 82 deaths, pneumonia 31, and bronchitis 30.

471; 3. CHORLTON; *Chorlton-upon-Medlock*.—Births 318; Deaths 290. The deaths are heavier than in any previous quarter, except during the cholera epidemic of 1849, for the last ten years. The excessive mortality is attributable to scarlatina, which caused no less than 50 deaths, and at present shows no signs of abatement. Whooping-cough is on the decline, 27 cases having been recorded against 37 in the previous quarter. The deaths of children under 6 years of age amount to 151.

471; 4. CHORLTON; *Hulme*.—Births 627; Deaths 494. The deaths are considerably above the average, owing to the great fatality of scarlatina. There have been no less than 113 deaths from that disease, which has assumed a most fatal character, baffling the skill of the surgeons; it has not been confined to any one part, but has carried its ravages over the thickly populated as well as the open ground. It is the opinion of most of the medical men that the humid weather during the last two months has been a great aggravation of the disease; they find that during dry weather it decreases, and on the resumption of the moist and unseasonably warm atmosphere it again increases. There have been 9 deaths from typhus, and 2 from small-pox; there have also been 4 deaths from diphtheria, which have all taken place in one part of the district, and that part which we always consider as the most healthy.

472; 1. SALFORD; *Pendleton*.—Births 197; Deaths 153. The deaths are considerably above the average. Scarlatina, bronchitis, and measles have been very prevalent.

472; 2. SALFORD; *Broughton*.—Births 63; Deaths 57. The deaths are above the average. Scarlatina has been prevalent, causing 14 deaths.

472; 3. SALFORD; *Greengate*.—Births 342; Deaths 384. The deaths are above the average, caused by scarlatina, owing, as I reported last quarter, to the dirty habits of children's parents, and the ill-

ventilated cottages they reside in. The disease is now on the decline.

472; 4. SALFORD; *Regent Road*. — Births 273; Deaths 305. The deaths this quarter exceed the births, which has only been the case twice during the last five years, viz. in December quarter of 1854, and in the quarter ending March 1855. The increase of deaths may be ascribed principally to the prevalence of scarlatina, which disease has been very fatal during the last nine months. The poorer of the working classes have been the principal sufferers. The workhouse has been free from this disease; at least no death has occurred in it. A child one year of age died of congenital idiotcy. It was one in a family of six children, three girls whose mental development is good, and three boys idiots. Deaths from scarlatina during the quarter are 75, other fevers 10, diarrhoea 19, dysentery 3, measles 2, small-pox 1, and diphtheria 1. The fever is gradually subsiding.

473; 1. MANCHESTER; *Ancoats*. — Births 491; Deaths 517. During the year 1858, there have been fewer births than in any year since 1848. The deaths are above the average. 120 deaths have occurred from scarlatina, viz. in October 44, in November 38, and in December 38.

473; 2. MANCHESTER; *Deansgate*. — Births 221; Deaths 263. The deaths are considerably above the average, although the population must of late have been much diminished, many streets and houses having been pulled down to make room for warehouses and public buildings or improvements. 156 children under 5 years of age have died. The deaths from zymotic diseases were 81; viz. from scarlatina 60, small-pox 1, typhus 8, measles 5, and whooping-cough (doubtfully zymotic) 7. During the preceding quarter 55 deaths took place from scarlatina. Nearly the whole of this so-called scarlatina is of the form "anginosa," and is, as far as I have seen it, identical with the disease now called "diphtheria."

473; 3. MANCHESTER; *London Road*. — Births 262; Deaths 244. The deaths are above the average. The excess is owing to an unusual proportion of cases of scarlatina and bronchitis. There were of scarlatina 45 cases, and of bronchitis 23.

473; 5. MANCHESTER; *St. George*. — Births 434; Deaths 434. The deaths by far exceed the average, the following being the principal causes: scarlatina 108, generally of the malignant form, convulsions 38, pneumonia 36, phthisis 35, bronchitis 34, and diarrhoea 12.

473; 6. MANCHESTER; *Newton*. — Births 155; Deaths 115. Scarlatina has prevailed, and also bronchitis. There were 6 cases of diarrhoea, 12 of consumption, 4 of fever, 10 of scarlatina, 11 of bronchitis, and 1 of cholera.

473; 7. MANCHESTER; *Cheetham*. — Births 152; Deaths 147. The deaths are considerably above the average. Fever, whooping-cough, measles, and malignant scarlatina have been prevalent. From scarlatina 2 and 3 in a family have died; 40 deaths have been registered from that disease, 6 from measles, 9 from whooping-cough, and 8 from fever. Another cause why deaths in this district have increased this quarter is, that a new workhouse belonging to Manchester has been opened in Crumpsall, a part of Cheetham district; 13 deaths have been registered from that establishment.

473; 8. MANCHESTER; *Failsworth*. — Births 38; Deaths 35. The deaths are above the average. Whooping-cough, fever, and bronchitis are very prevalent.

474; 1. ASHTON-UNDER-LYNE; *Knott Lanes*. — Births 65; Deaths 55. The deaths are above the average, which I attribute to the prevalence of diseases of the respiratory organs, of which there had been 16 cases; 6 cases of measles and 4 of scarlatina. I have registered 1 case of small-pox, previously vaccinated.

474; 2. ASHTON-UNDER-LYNE; *Ashton Town*. — Births 224; Deaths 299. The deaths are above the average; the increase is to be attributed to measles and pneumonia, 36 deaths having been registered from the former and 30 from the latter, principally among children.

474; 3. ASHTON-UNDER-LYNE; *Audenshaw*. — Births 116; Deaths 120. More deaths have been registered this quarter than in any preceding quarter for several years. Severe sickness still continues from scarlatina, whooping cough, measles. All the various diseases assume the malignant form. Last quarter I registered 2 births for 1 death; this quarter the deaths exceed the births.

474; 4. ASHTON-UNDER-LYNE; *Denton*. — Births 50; Deaths 40. The deaths exceed the average. There have been 5 fatal cases of measles and 5 of scarlatina.

474; 5. ASHTON-UNDER-LYNE; *Newton*. — Births 53; Deaths 64. The deaths are considerably above the average, owing to the prevalence of epidemic diseases among children, namely, measles 9 deaths, pneumonia 8, whooping cough 3.

474; 6. ASHTON-UNDER-LYNE; *Dukinfield*. — Births 241; Deaths 247. The deaths are above the average, and include 12 from diarrhoea, 5 pertussis, 30 pneumonia, 3 from small-pox, 2 typhus, 44 from measles, 7 from scarlatina, 19 from marasmus, 18 phthisis, and 6 cyanache trachealis. Small-pox, measles, and scarlatina, with sore throat, have been and are still prevalent.

474; 7. ASHTON-UNDER-LYNE; *Hartshead*. — Births 131; Deaths 171. The deaths are above the average, owing to the prevalence of scarlatina and measles.

475; 1. OLDHAM; *Oldham below Town*. — Births 306; Deaths 289. The district is tolerably healthy, notwithstanding the damp unwholesome weather. 29 deaths occurred from measles, which has been very prevalent, 29 from pneumonia, 13 from diarrhoea, 10 from scarlatina, 6 from fever, and 2 from typhus.

475; 2. OLDHAM; *Oldham above Town*. — Births 258; Deaths 228. The deaths from measles have been numerous. Diphtheria has also been fatal in a few instances.

475; 3. OLDHAM; *Chadderton*. — Births 113; Deaths 62. The deaths are slightly above the average. Measles has prevailed, and caused 3 deaths, and scarlatina was fatal in 4 instances.

475; 5. OLDHAM; *Royton*. — Births 55; Deaths 57. The number of births is usually about 80, but I cannot assign a reason for the decrease. The deaths are above the average, principally owing to scarlatina, which is still prevalent, and has caused 8 deaths.

475; 6. OLDHAM; *Crompton*. — Births 57; Deaths 54. The deaths are in excess of the average, chiefly from scarlatina, which was fatal in 10 cases.

476; 3. ROCHDALE; *Castleton without*. — Births 70; Deaths 49. The deaths are rather above the average, in consequence of scarlatina, measles, and croup being prevalent.

476; 4. ROCHDALE; *Castleton within*. — Births 111; Deaths 122. The deaths are far above the average, arising from the prevalence of measles, a few cases of small-pox, but more especially scarlatina.

476; 7. *ROCHDALE; Wardleworth.*—Births 140; Deaths 138.—The deaths exceed those of any previous corresponding quarter. The increase is owing to the prevalence of scarlatina, measles, and pneumonia. There were from scarlatina 11 deaths, measles 7, pneumonia 14, phthisis 12, and bronchitis 10.

477; 1. *HASLINGDEN; Newchurch.*—Births 136; Deaths 131. The deaths are above the average. Typhus, scarlatina, measles, and small-pox have been prevalent. From typhus 4, scarlatina 4, measles 5, and small-pox 1.

477; 2. *HASLINGDEN; Rossendale.*—Births 98; Deaths 68. Deaths above the average. There were 16 cases of diphtheria.

477; 5. *HASLINGDEN; Accrington.*—Births 130; Deaths 140. The deaths are above the average. The prevailing diseases have been scarlatina 35 cases, measles 10, small-pox 9.

478; 1. *BURNLEY; Burnley.*—Births 326; Deaths 232. Scarlatina 25, small-pox 8, typhus 3, diarrhoea 10.

478; 3. *BURNLEY; Colne.*—Births 156; Deaths 109. The deaths are about an average, and include 20 from scarlatina.

479; 3. *CLITHEROE; Chipping.*—Births 25; Deaths 32. Scarlatina has been prevalent, and caused 17 deaths.

479; 4. *CLITHEROE; Clitheroe.*—Births 60; Deaths 68. The deaths above the average. Scarlatina has prevailed during the last 12 months, and in the present quarter has proved fatal in 21 cases. The disease has, however, lately considerably abated.

480; 4. *BLACKBURN; Blackburn.*—Births 562; Deaths 410. The deaths are slightly above the average. There have been 34 deaths from scarlatina, 24 from measles, 8 from small-pox, and 5 from typhus.

480; 5. *BLACKBURN; Oswaldtwistle.*—Births 96; Deaths 61. The deaths are above the average, and include 10 from scarlatina and 3 from typhus.

480; 6. *BLACKBURN; Darwen.*—Births 161; Deaths 119. The deaths are below the average.

480; 7. *BLACKBURN; Witton.*—Births 66; Deaths 36. The deaths are under the average. Small-pox is very prevalent throughout the whole of the district, but only proved fatal in 1 case. The frequency of the disease may be attributed to the neglect of vaccination in past years.

481; 2. *CHORLEY; Leyland.*—Births 56; Deaths 68. Scarlatina has been very prevalent and fatal, the number of deaths from that disease during the quarter having been 24, all of children.

481; 4. *CHORLEY; Chorley.*—Births 165; Deaths 137. The deaths exceed the average, owing to the prevalence of scarlatina, from which cause 44 deaths have occurred.

482; 2. *PRESTON; Preston.*—Births 678; Deaths 640. The births are below the average, no doubt owing to a number of carpenters, bricklayers, &c. leaving the town in search of employment. The deaths are above the average. Fevers and bronchitis have been very prevalent and fatal. The principal complaints are bronchitis 83 deaths, consumption 70, disease of heart 20, fevers 29, scarlatina 56, typhus 19, pneumonia 40, diarrhoea 31, old age 24, and whooping-cough 15.

482; 3. *PRESTON; Walton-le-Dale.*—Births 43; Deaths 60. The deaths are much above the average, owing to the prevalence of scarlatina.

483; 1. *FYLDE; Kirkham.*—Births 90; Deaths 92. Scarlatina of a very malignant character has been

prevalent all the quarter. The number of deaths from that cause alone has been 40.

483; 3. *FYLDE; Poulton-le-Fylde.*—Births 83; Deaths 54. Births and deaths are under the average.

486; 2. *ULVERSTONE; Colton.*—Births 31; Deaths 16. The births and deaths are about the average. I have registered during the quarter, 1 death from scarlatina maligna, and 1 from "synochus, angina maligna."

486; 3. *ULVERSTONE; Ulverstone.*—Births 85; Deaths 56. Small-pox is very prevalent, and has been since May last; there have been several hundred cases, and 19 have proved fatal. The town is without sanitary regulation, and the drainage is defective. The number of deaths during the year was 211; and supposing the present population to have increased since 1851 from 6720 to 7500 (as is the general opinion), the deaths would be nearly 28 in 1000. There have been 5 deaths from small-pox; the disease does not appear to be abating.

486; 4. *ULVERSTONE; Dalton.*—Births 105; Deaths 55. The deaths are considerably above the average, owing to typhus and low fever, scarlatina, small-pox, and whooping-cough prevailing in the sub-district. Deaths from typhus and low fever 4, scarlatina 5, small-pox 1, whooping-cough 4.

IX. YORKSHIRE.

35. WEST RIDING.

487; 3. *SEDBERGH; Dent.*—Births 13; Deaths 8. 5 of the deaths were from measles.

488; 1. *SETTLE; Bentham.*—Births 39; Deaths 35. Deaths above the average. Typhus caused 4 deaths, and 4 were from scarlatina, those of a mother and 3 children residing on a farm not near any village.

489; 3. *SKIPTON; Barnoldswick.*—Births 42; Deaths 48. Small-pox prevailed, and caused 13 deaths.

492 a; 1. *GREAT OUSEBURN; Boroughbridge.*—Births 51; Deaths 23. 1 death occurred from scarlatina, and 1 from ulcerated sore throat, which disease has been very prevalent; but the district upon the whole is healthy.

492 b; 2. *KNARESBOROUGH; Harrogate.*—Births 49; Deaths 43. The births are somewhat below the average. There have been more premature births and still-born children than usual. The deaths comprise some fatal cases of throat complaint; in one instance 3 deaths in one family.

493; 1. *OTLEY; Harewood.*—Births 26; Deaths 25; The deaths are above the average. Scarlatina and measles have been prevalent in the village of Weeton, and 5 deaths were registered from these diseases.

493; 3; *OTLEY; Otley.*—Births 84; Deaths 86. Scarlatina has been rather prevalent amongst children.

493; 4. *OTLEY; Yeadon.*—Births 80; Deaths 85. The deaths are above the average, and I have never registered so many since the commencement of the Registration Act, except in one quarter, 13 years since. Typhus, fever of a weaker kind, scarlatina, whooping-cough, and measles have greatly prevailed, chiefly induced, in my opinion, by warm, damp, foggy weather, as great exertions are made in sanitary matters, and people are well employed in the district, and have enough food and clothing in general; indeed trade has not been so good for many years as it is now and has been for several months past. Scarlatina caused 5 deaths, pneumonia 3, measles 12, typhus 7, fever, probably typhus, 2, brain fever 1, whooping-cough 2.

494; 2. KEIGHLEY; *Keighley*.—Births 184; Deaths 246. The deaths are much above the average. Scarlatina maligna and scarlatina caused 104 deaths, and typhus 8.

494; 3. KEIGHLEY; *Haworth*.—Births 50; Deaths 68. Scarlatina prevalent.

495; 1. TODMORDEN; *Hebden Bridge*.—Births 66; Deaths 76. There has been much sickness during the quarter. The prevailing diseases have been, bronchitis 3 deaths, erysipelas 3, and slow continued fevers, which have sometimes assumed a typhoid character, 5 deaths; also a few cases of scarlatina and measles.

495; 2. TODMORDEN; *Todmorden*.—Births 126; Deaths 111. The deaths are more than the average. Scarlatina and measles have been very prevalent during the latter two months of the quarter; the former disease has only been fatal in 1 case, but the latter has (with its sequelæ) been fatal in 13 cases. 34 deaths have occurred from diseases of the respiratory organs, not including the sequelæ of measles. 6 persons have died from erysipelas.

496; 1. SADDLEWORTH; *Delph*.—Births 70; Deaths 74. There is a considerable increase in the deaths, particularly amongst young children, from the following complaints: pneumonia, scarlatina maligna, and measles. I think they in a great measure arise from the damp, foggy, and sudden changes in the weather from hot to cold which we have experienced lately. The following are the numbers from each complaint: scarlatina 11, pneumonia 8, measles 5.

497; 2. HUDDERSFIELD; *Meltham*.—Births 39; Deaths 36. The deaths exhibit an increase over the average. Scarlatina still prevails, but is on the decline; 4 cases have proved fatal. Small-pox has prevailed here for some time both amongst children and adults, but no fatal cases. Whooping-cough and measles have also prevailed. 3 cases of the former and 2 of the latter have been fatal.

497; 8. HUDDERSFIELD; *Kirkheaton*.—Births 93; Deaths 85. The deaths far exceed the number in any corresponding quarter; the prevailing disease being scarlatina.

497; 9. HUDDERSFIELD; *Huddersfield*.—Births 258; Deaths 238. Deaths are above the average, which may be accounted for by my having registered 22 deaths from phthisis, 28 from scarlatina and typhus, 17 from bronchitis, 14 rubeola, and 7 from diarrhœa.

497; 10. HUDDERSFIELD; *Lockwood*.—Births 73; Deaths 74. Deaths considerably above the average. Typhus, scarlatina, and bronchitis have been very prevalent. Many adults, as well as children, have fallen victims to these disorders.

497; 11. HUDDERSFIELD; *Golcar*.—Births 110; Deaths 72. The deaths are a little above the average; the increase may be attributed to the mortality amongst children, 29 having died at 2 years of age.

498; 1. HALIFAX; *Rastrick*.—Births 38; Deaths 52. The deaths are nearly double the average, caused by measles and scarlatina being so prevalent, and in many cases fatal. There have been, from measles 12 deaths, scarlatina 6, typhus 2.

498; 2. HALIFAX; *Brighouse*.—Births 61; Deaths 67. The deaths are in excess of the average, attributable to scarlatina, which has caused 20 per cent. of the whole.

498; 4. HALIFAX; *Halifax*.—Births 269; Deaths 265. The deaths are above the average. The continued prevalence of scarlatina will account for the excess. Scarlatina caused 31 deaths, fever 7, typhus 1, diarrhœa 5, and small-pox 3.

498; 5. HALIFAX; *Elland*.—Births 108; Deaths 91. The deaths are above the average. Measles and scarlatina have been very prevalent; there were 16 deaths from measles and 7 from scarlatina. 2 deaths from small-pox; 1 of these after vaccination. There were 49 deaths of children under 5 years of age.

498; 9. HALIFAX; *Ovenden*.—Births 85; Deaths 76. The deaths are above the average. 13 occurred from convulsions, 9 from scarlatina, 8 from phthisis, and 4 from diarrhœa.

498; 10. HALIFAX; *Northowram*.—Births 149; Deaths 138. The deaths are above the average, one fourth of which is from scarlatina.

499; 5. BRADFORD; *Bradford East End*.—Births 210; Deaths 195. The deaths are rather above the average. Scarlatina, fever, and typhus, morbus cordis, bronchitis, and pneumonia have been prevalent. I have registered from scarlatina 26 deaths, fever 11, typhus 7, bronchitis 10, pneumonia 12, diarrhœa 7, morbus cordis, &c., 17.

499; 6. BRADFORD; *Bradford West-End*.—Births 165; Deaths 200. There has been an increase of mortality, owing to the prevalence of scarlatina, bronchitis, and pneumonia.

499; 7. BRADFORD; *Horton*.—Births 327; Deaths 302. Deaths above the average. Scarlatina very prevalent and fatal.

499; 8. BRADFORD; *Thornton*.—Births 104; Deaths 109. The number of deaths is 25 per cent. above the average, and is principally attributable to the prevalence of scarlatina, from which there have been 24 deaths in that part of my district where it has prevailed, though it is both well drained and stands on high ground. There have been 13 deaths from pneumonia and bronchitis, 12 from phthisis, 12 from convulsions, and 6 from typhus.

499; 10. BRADFORD; *Shipley*.—Births 62; Deaths 64. Deaths above the average. Scarlatina and measles have been prevalent, but there have not been very many deaths. Scarlatina caused 5 deaths, typhus 2, measles 4, diarrhœa 5, arsenic 3.

499; 12. BRADFORD; *Calverley*.—Births 45; Deaths 49. Deaths more than double the average, occasioned by scarlatina.

499; 13. BRADFORD; *Pudsey*.—Births 105; Deaths 158. The deaths are greatly above the average. The prevalence of scarlatina, connected with other diseases immediately following, proving fatal in 78 cases, may be regarded as the chief cause of the increased number of deaths. There have been several fatal cases of other kinds of fever and inflammation, including typhus, meningitis, bronchitis, pneumonitis, together with measles.

500; 2. HUNSLET; *Kirkstall*.—Births 180; Deaths 190. An unusual mortality has prevailed during the quarter. Scarlatina of a very malignant character has been fatal amongst children, issuing in anasarca, croup, and mortification of the glands of the throat. The disease has been partial in its attack. Some parts of the district, *e.g.*, Headingley and Burley and Horsforth, have escaped, whilst others, *e.g.*, Bramley and Kirkstall, have suffered extremely from its ravages. The total number of deaths from scarlatina is 57.

500; 6. HUNSLET; *Holbeck*.—Births 160; Deaths 141. Scarlatina has been prevalent, and caused 18 deaths.

501; 1. LEEDS; *South-east*.—Births 270; Deaths 258. The number of deaths is above the average, scarlatina having been fatal amongst children.

501; 2. LEEDS; *North*.—Births 377; Deaths 349. The deaths are considerably more than the average. Scarlatina was very fatal.

502; 2. DEWSBURY; *Batley*.—Births 110; Deaths 83. The decrease of births is caused mainly by removals out of the neighbourhood for want of work.

502; 3. DEWSBURY; *Gomersal*.—Births 102; Deaths 80. The deaths are 15 above the average, and include 8 from scarlatina.

502; 4. DEWSBURY; *Liversedge*.—Births 130; Deaths 125. The mortality has been in excess. 41 deaths occurred from scarlatina, wholly on the western part of my district.

502; 5. DEWSBURY; *Mirfield*.—Births 71; Deaths 54. The deaths are above the average, owing to scarlatina being prevalent, and causing 16 deaths.

502; 6. DEWSBURY; *Dewsbury*.—Births 190; Deaths 135. An increase of deaths, in consequence of the virulent disease of small-pox, not vaccinated, causing upwards of 30 deaths, and several cases of scarlatina.

503; 4. WAKEFIELD; *Wakefield*.—Births 146; Deaths 97. The small-pox has been very prevalent, but only 3 deaths have occurred from it.

505; 1. BARNSELY; *Darton*.—Births 48; Deaths 41. Whooping-cough, scarlatina, and bronchitis have prevailed to some extent.

505; 2. BARNSELY; *Barnsley*.—Births 237; Deaths 203. The births and deaths are above the average. Of the 203 deaths, 124 are those of children not exceeding 5 years of age. Diphtheria has carried off 4, scarlatina 23, measles 15, whooping-cough 6, typhus 8, fever (not specified) 3, bronchitis 15, and pneumonia 13 persons. Barnsley appears to have suffered most, 148 deaths having occurred in that township; Dodworth stands next, 19 deaths having occurred there, the sanitary arrangements of which are stated to be very imperfect, and the supply of water bad and insufficient. Typhus has prevailed there for some months, but has now nearly subsided. Never since the introduction of the Registration Act has the mortality been so great as during the past quarter, especially amongst children. Trade is very fair, and provisions, except butchers' meat, are moderately cheap.

507; 1. ECCLESALL BIERLOW; *Nether Hallam*.—Births 148; Deaths 102. The number of deaths is above the average, and there have been 15 from scarlatina and 5 from diphtheria.

507; 4. ECCLESALL BIERLOW; *Ecclesall Bierlow*.—Births 340; Deaths 275. The number of deaths has been great, being 47 above the greatest number registered during the corresponding quarter in any previous year. Scarlatina has been prevalent, and there have been 47 deaths from this cause alone, 6 from diphtheria, and 14 from diarrhoea. I am informed by one of the medical officers of the union, that scarlatina has been of a very aggravated character, the cases presenting appearances which could not be accounted for without attributing to the disease some especial virulence, independently of the effects of imperfect ventilation and deficient drainage.

508; 1. SHEFFIELD; *West*.—Births 141; Deaths 132. The deaths are above the average. Scarlatina has been very prevalent, and caused 22 deaths. Phthisis and pneumonia have also been fatal.

508; 2. SHEFFIELD; *North*.—Births 316; Deaths 302. The following are the chief causes of death; viz., pneumonia 14 deaths, diarrhoea 19, fever 11, typhus 2, bronchitis 23, phthisis 37, scarlatina 25,

convulsions 12, whooping-cough 15, diphtheria 3, and ulcerated throat 3.

508; 3. SHEFFIELD; *South*.—Births 162; Deaths 143. The number of deaths is very large. Scarlatina and its sequelæ have caused 25 deaths.

508; 4. SHEFFIELD; *Sheffield Park*.—Births 214; Deaths 165. Scarlatina has proved fatal in 38 cases, and diphtheria in 7. Diseases of the respiratory organs have been prevalent.

508; 5. SHEFFIELD; *Brightside*.—Births 227; Deaths 190. The births and deaths are above the average. The mortality amongst children has been very great, nearly three-fourths of the deaths being those of children under 5 years of age. Scarlatina proved fatal in 26 instances, diphtheria in 9, whooping-cough in 10, and measles in 9. Diseases of the respiratory organs have been very prevalent and fatal.

508; 7. SHEFFIELD; *Handsworth*.—Births 29; Deaths 47. The deaths are much above the average. Scarlatina and measles have been prevalent amongst children; 16 have died from these diseases; 24 children have died under 2 years of age. Diphtheria and putrid sore throat has been suddenly fatal in several cases.

510; 3. DONCASTER; *Doncaster*.—Births 175; Deaths 125. The deaths are above the average. Bronchitis caused 16 deaths, fever 16.

513; 2. SELBY; *Selby*.—Births 94; Deaths 80. Small-pox is very prevalent, and caused 12 deaths, and not one after vaccination.

36. EAST RIDING (with York).

517; 3. HOWDEN; *Howden*.—Births 90; Deaths 82. The deaths are nearly double the average. I have registered no less than 11 cases of diphtheria, 6 of typhus, and 4 of scarlatina.

518; 1. BEVERLEY; *South Cave*.—Births 18; Deaths 15. Malignant sore throat and diphtheria have been very prevalent at the village of North Newbald in this district; out of 60 to 65 cases about 6 proved fatal. It still lingers about the village, and was not a sequence of scarlatina, as throat attacks occurred when there had been no previous eruption.

518; 3. BEVERLEY; *Lockington*.—Births 19; Deaths 12. 1 death from diphtheria.

518; 4. BEVERLEY; *Leven*.—Births 9; Deaths 7. The small-pox has been prevalent. 1 death occurred from typhus, and 1 from diphtheria.

520; 3. HULL; *Myton*.—Births 320; Deaths 232. The deaths are below the average.

523; 4. DRIFFIELD; *Langtoft*.—Births 32; Deaths 28. The deaths have been above the average. Typhus, whooping-cough, croup, and scarlatina have been more than usually prevalent.

37. NORTH RIDING.

525; 2. SCARBOROUGH; *Scarborough*.—Births 156; Deaths 93. Compared with corresponding quarters, there is an increase of births and a decrease of deaths. 5 deaths from cynanche and diphtheria took place.

529; 1. HELMSLEY; *Helmsley*.—Births 30; Deaths 15. The deaths include 3 cases of diphtheria, which has been prevalent.

532; 1. GUISBROUGH; *Lofthouse*.—Births 21; Deaths 17. The deaths still continue above the average. 8 of the 17 deaths are from malignant ulcerated throat. This disease (diphtheria) is still prevalent.

532; 2. GUISBROUGH; *Marske*.—Births 44; Deaths 27. Scarlatina has been prevalent.

533; 1. STOKESLEY; *Stokesley*.—Births 54; Deaths 53. The deaths are above the average. Typhus has been prevalent, and 13 fatal cases occurred.

534; 2. NORTHALLERTON; *Northallerton*.—Births 68; Deaths 45. The mortality is below the average. In the town of Northallerton there have been numerous cases both of ulcerated and putrid sore throat, as well as several of diphtheria.

X. NORTHERN COUNTIES.

38. DURHAM.

541; 1. STOCKTON; *Yarm*.—Births 260; Deaths 151. The births and deaths are above the average. Bronchitis caused 13 deaths, influenza and pneumonia 23, slow fever 8, and typhus 5, which may be attributed to the mildness of the season.

541; 2. STOCKTON; *Stockton*.—Births 180; Deaths 107. Deaths are about an average; there were 3 fatal cases of scarlatina, 2 of whooping-cough, 3 of fever, and 1 of typhus.

541; 3. STOCKTON; *Hartlepool*.—Births 300; Deaths 122. This sub-district is in a healthy state. The sanitary arrangements have much improved within the last 2 years.

541; 4. STOCKTON; *Sedgefield*.—Births 99; Deaths 57. The sub-district was very healthy during the early part of the quarter, but during the last month or six weeks typhus has been very prevalent in the Ferryhill part, from which cause there have been 6 deaths.

542; 1. AUCKLAND; *Bishop Auckland*.—Births 350; Deaths 235. The deaths are above the average. Typhoid fever has prevailed in one part of my district to some extent, and 14 or 15 deaths may be attributed to it. Measles also has prevailed in another part of the district, and about the same number of deaths have occurred. Whooping-cough carried off some 10 or 12 children, and diarrhoea about the same number. We have also had 3 or 4 cases of small-pox, principally amongst the Irish families, none of which had been vaccinated. Indeed little or no attention is paid to that operation.

543; 2. TEESDALE; *Barnard Castle*.—Births 67. Deaths 61. The deaths have exceeded the average, which may be attributed principally to sudden changes of the weather. The increase is due to consumption, pneumonia, and scarlatina.

545; 2. DURHAM; *Lanchester*.—Births 180; Deaths 142. Deaths above the average. Scarlatina, pertussis, typhus, small-pox, and diphtheria prevailed. Deaths from pertussis generally complicated with pneumonia 20, scarlatina 17, typhus and continued fever 6, small-pox 1, diphtheria 1.

545; 4. DURHAM; *St. Nicholas*.—Births 231; Deaths 156. The births are below the average, but the deaths are above, in consequence of small-pox, scarlatina, whooping-cough and measles having been so prevalent. 6 fatal cases from small-pox, 10 from scarlatina, and 8 from whooping-cough.

546; 1. EASINGTON; *Easington*.—Births 280; Deaths 134. Deaths a little above the average. Small-pox has been prevalent in some parts of the district; there have been 4 deaths, 3 of which "not vaccinated."

548; 1. CHESTER-LE-STREET; *Chester-le-Street*.—Births 158; Deaths 86. The health of this district has been various during the quarter. There has been one case of typhus and one of scarlatina, both fatal. Whooping-cough has prevailed. Vaccination is being attended to, and sanitary arrangements are being enforced where required.

549; 2. SUNDERLAND; *South Bishop Wearmouth*.—Births 214; Deaths 112. Deaths slightly less than in the corresponding quarter of last year. Diarrhoea caused 2 deaths, diphtheria 5, scarlatina 3, typhus 2, remittent fever 1, whooping-cough 3, croup 2, laryngitis 1, and malignant sore throat 1.

549; 3. SUNDERLAND; *East*.—Births 80; Deaths 77. Deaths rather above the average. Typhus caused 3 deaths, scarlatina 5, and diphtheria 1.

550; 1. SOUTH SHIELDS; *Westoe*.—Births 315; Deaths 196. Pertussis, bronchitis, and scarlatina have prevailed. Deaths from pertussis 21, bronchitis 10, and scarlatina 9.

39. NORTHUMBERLAND.

552; 3. NEWCASTLE-ON-TYNE; *St. Nicholas*.—Births 104; Deaths 120. The return exhibits a decrease both of births and deaths, as compared with the corresponding quarter of 1857. The weather during the greater part of the last 3 months has been damp and foggy, and considered by medical practitioners to be unhealthy. I consider that this decrease arises from the diminution of population. The district has a considerable frontage to the river, and offers facilities for carrying on extensive manufactories, and the workmen employed at them now prefer to reside in a higher and healthier part of the town, which immediately adjoins this district.

555; 3. HEXHAM; *Allendale*.—Births 57; Deaths 40. The deaths are above the average. Whooping-cough has been prevalent, but bronchitis was most fatal; 3 deaths occurred from the former disease, and 9 from the latter.

558; 2. MORPETH; *Bedlington*.—Births 118; Deaths 96. Both births and deaths are above the average. 15 deaths have occurred from typhus and continued fever, especially in Bedlington and the colliery habitations. Diarrhoea, bronchitis, and diphtheria are prevalent. Croup too has been fatal in several instances.

561; 2. BERWICK; *Berwick-upon-Tweed*.—Births 108; Deaths 101. The deaths have been considerably above the average. Scarlatina caused no fewer than 34 deaths. 43 deaths occurred in the parish of Tweedmouth; the remainder of the 101 in the parish of Berwick. Scarlatina was most fatal in the first-mentioned parish. Several bad cases of typhoid fever occurred in both parishes.

40. CUMBERLAND.

568; 6. CARLISLE; *Dalston*.—Births 35; Deaths 24. The deaths are above the average, from the prevalence of scarlatina, from which 5 cases have occurred.

569; 1. WIGTON; *Wigton*.—Births 70; Deaths 81. The births are below and the deaths above the average. Small-pox caused 4 deaths, and measles 2.

41. WESTMORLAND.

573; 3. EAST WARD; *Orton*.—Births 25; Deaths 10. Measles is prevalent in one part of the district (Orton), and whooping-cough in another (Asby).

XI. MONMOUTHSHIRE & WALES.

42. MONMOUTHSHIRE.

576; 1. CHEPSTOW; *Shirenewton*.—Births 33; Deaths 47. Deaths much above the average, arising from diphtheria, which has been chiefly prevalent in the parishes of Caerwent, Caldicot, and Ifton. Caerwent is considered a healthy place.

578; 3. ABERGAVENNY; *Abergavenny*.—Births 60; Deaths 69. The deaths are above the average. Small-

pox has been epidemic in the district, but only 2 deaths are registered from that cause.

578; 4. ABERGAVENNY; *Blaenavon*.—Births 55; Deaths 41. The deaths are above the average; pertussis prevailed, and caused 7 deaths, typhus 2, and bronchitis 8.

580; 1. NEWPORT; *Caerleon*.—Births 55; Deaths 45. The deaths exceed the number registered in any other corresponding quarter of last 5 years. The cause of such increase is scarlatina. Out of 45 deaths registered, 12 were from scarlatina, which has prevailed where premises have been in a bad sanitary state.

580; 2. NEWPORT; *Newport*.—Births 226; Deaths 295. Of this excessive number of deaths, 186 have been caused by fever, measles, whooping-cough, chest complaints, and by scarlatina.

580; 3. NEWPORT; *St. Woollos*.—Births 61; Deaths 60. Diphtheria, scarlatina, and measles have been very prevalent; the deaths of children more than usually numerous.

43. SOUTH WALES.

582; 3. MERTHYR TYDFIL; *Upper*.—Births 248; Deaths 239. The deaths are rather more numerous than usual, in consequence of an epidemic of measles.

583; 3. BRIDGEND; *Bridgend*.—Births 77; Deaths 68. Diphtheria has been very prevalent in a little village called Laleston. I have registered 9 deaths amongst children. From inquiries among the medical men, it appears that sanitary measures are neglected, and the houses small, with no back windows, so that when any form of disease appears it becomes localised in the houses.

584; 1. NEATH; *Margam*.—Births 174; Deaths 134. The deaths exceed the average. Scarlatina caused 14 deaths, small-pox 8, and measles 4.

585; 2. SWANSEA; *Llangafelach*.—Births 115; Deaths 97. Small-pox caused 5 deaths, scarlatina 27, bronchitis 8, and pneumonia 6. The population of this district is increasing very fast.

585; 3. SWANSEA; *Swansea*.—Births 263; Deaths 308. The deaths are double the average, which must be attributed to the prevalence of scarlatina, 107 having been from that cause. A large portion of the town is undergoing a system of drainage, and in many places the earth thrown up is very objectionable. 32 persons have died from pneumonia, 21 from bronchitis, and 11 from small-pox, which is now on the decrease.

585 b; 1. GOWER; *Gower Eastern*.—Births 32; Deaths 34. There have been many cases of scarlatina of late, and also some of small-pox.

586; 3. LLANELLY; *Pembrey*. Births 50; Deaths 48. An increase of deaths, owing to small-pox and scarlatina.

589; 1. CARMARTHEN; *Llangendeirne*.—Births 67; Deaths 62. Scarlatina and small-pox have prevailed; 19 died from scarlatina and 10 from small-pox.

589; 3. CARMARTHEN; *Carmarthen*.—Births 105; Deaths 133. There have been 49 deaths from small-pox and 18 from scarlatina, also a few from measles.

589; 4. CARMARTHEN; *Conwil*.—Births 54; Deaths 40. Small-pox has been very prevalent, but has only proved fatal in 4 cases.

590; 4. NARBERTH; *Narberth*.—Births 22; Deaths 24. Small-pox is on the increase considerably; 2 deaths have taken place this quarter.

591; 1. PEMBROKE; *Tenby*.—Births 57; Deaths 52. Deaths over the average. Small-pox very prevalent, and caused 6 deaths.

591; 2. PEMBROKE; *Pembroke*.—Births 116; Deaths 88. Deaths above the average, mainly attributable to small-pox. I believe every child that died had been neglected to be vaccinated; scarcely a child under 5 years that had been vaccinated caught the disorder, although the elder children under the same roof suffered severely.

592; 1. HAVERFORDWEST; *Milford*.—Births 93; Deaths 95. The births and deaths are above the average. 27 deaths from scarlatina, 2 from small-pox, 1 from diarrhoea, 4 from whooping-cough, 15 from phthisis.

592; 2. HAVERFORDWEST; *Haverfordwest*.—Births 85; Deaths 84. The deaths are above the average, owing to the prevalence of scarlatina and diphtheria.

592; 4. HAVERFORDWEST; *Fishguard*.—Births 53; Deaths 42. Small-pox caused 6 deaths.

595; 3. LAMPETER; *Lampeter*.—Births 15; Deaths 18. The deaths include 1 certified case of diphtheria, 1 of bronchitis, and 4 of inflammation of the throat.

597; 1. ABERYSTWITH; *Llanrhystyd*.—Births 22; Deaths 29. The deaths are above the average, and 10 may be attributed to croup and inflammation of the throat, brought on, it is thought, by the severity and sudden transition of weather.

601; 4. CRICKHOWELL; *Llanelly*.—Births 87; Deaths 70. The deaths are above the average, and include 1 from small-pox without previous vaccination.

602; 1. HAY; *Talgarth*.—Births 18; Deaths 20. Whooping-cough is prevalent, and has been fatal in 2 cases.

602; 3. HAY; *Hay*.—Births 34; Deaths 30. Small-pox has prevailed, but has not been very fatal. There were 5 deaths from small-pox. Low typhoid fever has also prevailed, and caused 4 deaths.

44. NORTH WALES.

606; 2. MACHYNLLETH; *Pennal*.—Births 24; Deaths 17. 6 deaths from fever during the quarter.

608; 2. MONTGOMERY; *Chirbury*.—Births 38; Deaths 23. The births and deaths are above the average. Diphtheria is very prevalent, but has not been fatal in any case. A surgeon informed me yesterday that he then had 17 cases under his care.

611; 3. WREXHAM; *Ruabon*.—Births 96; Deaths 89. Typhus (which is now abating) has been prevalent.

611; 4. WREXHAM; *Wrexham*.—Births 126; Deaths 108. The deaths include 8 from scarlatina, 10 from whooping-cough.

613; 2. ST. ASAPH; *Abergele*.—Births 36; Deaths 29. Scarlatina prevalent.

615; 2. CORWEN; *Corwen*.—Births 70; Deaths 57. The deaths are rather above the average. Scarlatina was fatal in 9 cases, and small-pox in 2.

619; 3. PWLLHELI; *Aberdaron*.—Births 22; Deaths 18. The deaths include 5 cases of scarlatina and 4 of putrid sore-throat.

621; 1. BANGOR; *Beaumaris*.—Births 91; Deaths 60. The deaths include 5 cases of small-pox.

621; 2. BANGOR; *Bangor*.—Births 95; Deaths 71. Deaths above the average, small-pox being very prevalent.

621; 3. BANGOR; *Llanllechid*.—Births 70; Deaths 46. The small-pox very prevalent, and 3 cases proved fatal; little attention is paid to vaccination.

622; 3. CONWAY; *Llechwedd Isaf*.—Births 11; Deaths 17. Scarlatina very prevalent.

623; 1. ANGLESEY; *Llangefni*.—Births 41; Deaths 34. Deaths above the average, and include 2 cases of small-pox, which is prevalent.

[The following Index furnishes a reference to the *Number* of each DISTRICT in the Tables of Marriages, Births, and Deaths contained in this Return. Any District in the Registrars' Notes may be found in the same manner. In forming the alphabetical arrangement, the principle adopted has been to place compound names in the order in which they are pronounced.]
